I mostly like to listen to fire departments (although I like to be able to turn on the PD if needed). I understand that Peoria Fire is dispatched by Phoenix Fire, as it looks like most of the area fire departments are. Is Phoenix Fire using the RWC, or are they still on VHF?

You load it as a P25 system and the 700 MHz. Or you can load the closest 800 MHz PHz sites. I live in the Surprise area and pick up Peoria without any problems.

Subject: [ArizonaScanner.com] RWC on BC996T

I'm moving to Peoria in a few weeks and am trying to set up to monitor the RWC on my BC996T (Note, not XT).

First of all, will I be able to monitor that system with this scanner?

If so, what type of system should I program it as? RadioReference says it's Motorola Project 25 Standard, but my scanner doesn't list that as an available system type. Freescan says "Digital XT" for that type. Should I use Motorola Type II/P25?

Can anybody help?

Chris Kennedy

they are on both … better quality audio on VHF though .. on the RWC-B system fire audio sounds like it's done with a microphone sitting in front of a VHF radio speaker. No wonder the fire guys are resisting switching to it. I refuse to listen to it that way.

You've got a little bit of Rural Metro Fire in the area as well. … some of the county islands.

Thanks again.

I'll probably listen to them on VHF then, assuming I can get reception. I'm going to be in an apartment using a stock antenna and will be located way up north at 107th and Happy Valley.

I've already programmed in Rural/Metro too.

I've been scanning since the days of eight channels and crystals, the last 15 years in San Diego. I'm looking forward to listening to something new and learning different terminology and locations.

From: Mark
Topic: 16431 Message: 16431

Monitoring the Glendale TRS during the game today-first time I've had a chance to do that. Wow! More interesting then the game. Talk group 1001 sounds like the event channel for Glendale-heard the dispatcher to remind all units that this is a "plain english" channel and that codes are "prohibited". Makes sense since units from several agencies are involved. Good copy from 83rd and Sherman on the 996T (mobile installation).

Does Glendale handout the equipment to the units involved or are other units, like those from Phoenix for instance, have the capability for interoperations on thier radios?

NFL games-definatly a monitoring experience.

Per a friend of mine with Tempe Fire Dept

The Mesa FD "TRV" units are going away and E218 will be back in service at Sta 203 in about 2 weeks and the former LT units that were used as TRV will go back to LT units . (Station 201's LT was put at Sta 203 to become TRV 203")

Some of both.

DPS for example has 'cache' radios that we hand out for use at Cardinals games.

Darn near every 800 MHz P25 radio in the valley has the requisite
systems and talkgroups programmed.

Most of the Law Enforcement detail around the race track will be handled by the Maricopa County Sheriff?s office. The MCSO system is a Motorola Type II mixed mode system. The sheriff talkgroups are digital, so you will need a digital scanner to listen to a lot of the talkgroups. In the past talkgroups Event 4 and Event 5 were used to coordinate parking, traffic and other activities. Here is a link to this system. You will only need to monitor the ?White Tanks? site #2 while around the track.
http://www.radioreference.com/apps/db/?sid=848

Avondale PD may be involved a little with the event. You will hear them on the Glendale System. This system is entirely digital, so you will need a digital scanner that will follow a P25 system to listen.
http://www.radioreference.com/apps/db/?sid=798

Finally, you will likely hear fire and medical on the Regional Wireless Cooperative (RWC). On this system you will hear Fire and Medical on the Fire Event talkgroups. You may also hear mutual aid communication on other event talkgroups. During the event listen to White Tanks site #208 and Simulcast E #102. The ?Simulcast E? site #102 may not be online this year as they currently have it down for an upgrade. This system is also entirely digital, so you will need a P25 capable scanner.
http://www.radioreference.com/apps/db/?sid=2508

There will be A LOT of stuff to listen to on race weekend. Have a great time at the races!

We are using 800 MHz for EMS only. VHF will stay up for fire calls and multi-company calls. That's all I can say.

It sounds like over the past few days calls for some Phoenix stations have been dispatched to K-7 and K-6. What I have heard have been medical calls units in the Central and North Central areas of the city and the Airport. (Stations 19, 29, 20, 17, 8, 60 are who I have heard.)

From what I was told by a friend from Tempe FD its mainly the medicals that are being run off the K deck for now, fires are staying on the Adeck for now, because of other agencies who respond with them dont have the digital capability

EMS in Phoenix ONLY is going to 800 MHz, one District at a time on A-Shifts. Sunday saw District 2 converting and District 3 will go on Wednesday, etc.

Channel 1 will stay on VHF and will be simulcast on 800 MHz, as it has been for years (no change).

Other cities on the RWC will convert to 800 MHz later. Some may never convert (not sure yet how that's gonna work).

800 MHz P25 is not safe on the fireground, so will not be used whenever firefighter safety is a concern. Those calls will be on VHF until a reliable solution can be found.

Ed

16457. Fw: Tempe City Services

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-11-17 21:20:09 UTC
From: Ed (K9EDK)
Topic: 16457 Message: 16457

Does anyone know where Tempe City services are now? I know PD joined the RWC, but I can't seem to hit on anything that sounds like City Services in Tempe, such as water, sanitation, etc. Tempe School busses are usually pretty talkative on the radio, as is parks, and now I can't find them.

I don,t know if this helps at all because i typically don,t monitor general municipal services;Butt just after tempe pd went to the new 700mhz ,i was getting municipal traffic on there old 800mhz system;shortly after i deleted all of the old tempe 800mhz frquency base. my 2096 does,nt pick up tempes new 700 mhz system. i don,t know if this is relavant or helpful. Thx Ken.

Hi Ed,

I typically just lock out the public service talkgroups and don't spend too much time trying to identify.

I can say that some of Tempe public services are on the RWC Simulcast F in the 20xx range. Here are some that I have monitored (and locked out).

2064T Sports Complex
2068
2069
2070
2071TempeTraffic
2079Tempe Maint
2093Tempe Parks

I typically only listen on nights and weekends, so this is likely not a complete list.

Thank you. That helps. I don't normally listen either, but was just curious since they just seemed to disappear. I still have the 800 MHz system and I haven't heard anything there, and haven't heard enough chatter on the RWC system to confirm Tempe City Services were there. Now that I have a little better idea where to look, I'll look a little harder.

Also there is an all band scanner antenna for your vehicle that looks like a phone antenna. It works great for apartments. I also use the 800 meg antenna for monitoring all bands works very well for an apartment. I was living in Mesa and could pick up Rural Metro from Tuscan with the 800 meg antenna. The 880 meg antenna is the radio shack part # Model: 20-283 | Catalog #: 20-283

16467. Phoenix public services scanning

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-11-20 01:29:42 UTC
From: ruperthalfman
Topic: 16467 Message: 16467

Hey everyone, was wondering if anyone is or has ever scanned any of Phoenix's public services (police, fire, etc) or knows of anyone that has.

I'm with a group that has a police/fire/EMS scanning app for the iPhone and iPod touch. The app has radio feeds from all over the US and Canada, but we'd like to have dedicated city of Phoenix police and fire feeds. We want to find someone who could setup a dedicated 24 hour scanning stream that would upload to our application.

We're willing to compensate anyone interested for the setup costs, as well as on a monthly basis for as long as the stream is provided. So please contact me if you are interested!

PFD Regional dispatch could always do what New South Wales Fire Brigade does. They operate on a 800 mhz digital system but the fire grounds are on UHF simplex. Just operate on the digital system for regular comms and the simplex hand helds for fire ground ops.

16470. Re: [ArizonaScanner.com] Re: Phoenix Fire Regional Dispatch 800 Mhz transition

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-11-21 20:49:41 UTC
From: Kenneth Howard
Topic: 16451 Message: 16470

Unless i over looked something the new fire system is digital;I did,nt actually look at the recieve, when i have been simulcasts; butt its been coming across on phx rwc; which is digital and when you listen to it; it sounds digital. or a very distinct audio to it.

PFD Regional dispatch could always do what New South Wales Fire Brigade does. They operate on a 800 mhz digital system but the fire grounds are on UHF simplex. Just operate on the digital system for regular comms and the simplex hand helds for fire ground ops.

16471. B14 RWC Surveillance

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-11-23 00:33:33 UTC
From: aar9sm
Topic: 16471 Message: 16471

I was following a Surveillance crew on on A deck 2996 from the airport and all of the sudden group commander said all units switch to B14 and about same time DPS was contacted on 460.200 to help out. Can anyone in the group tell me what the Talk Group is for B14 or at least a correct break down for the RWC talk groups!

2971 is encrypted so it's probably not be listed for that reason. You can listen to it, but you won't hear anything. The scanner will likely go right past it since it's encrypted.

16479. [ArizonaScanner.com] Re: Phoenix Fire Regional Dispatch 800 Mhz transition

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-11-25 00:28:39 UTC
From: m50steel
Topic: 16451 Message: 16479

Providence FD (Rhode Island) went digital with VHF simplex on the fireground. They put analog to digital repeaters in the engines but not in the ladders which works as long as a ladder doesn't arrive on scene first. Still they have had issues with echoes and digital noise on the VHF side. They have reverted back to the 1970's, thumbs up water on, thumbs down water off, etc. Sad.

I live in Gilbert too and could only get phx PD's 800 MHZ system sporadically. I bought an 800 MHZ beam antenna off Ebay and now I probably get about 90% of the radio traffic. I usually only listen to 400/800 (south phx & Maryvale) disctricts so I cant say much about the other districts.

Phoenix Police aren't automatically carried on all towers. It would only be if a Phoenix Police radio associated with the tower you have programmed is on that talkgroup. I haven't seen too many Phoenix Police officers in Gilbert so you won't typically hear those talkgroups on Gilbert towers.

you probably aren't going to get them in Gilbert unless you're really lucky. You could put in the Mesa/Topaz towers of RWC and add the Phoenix talk groups, but that would be only occasional catches when a unit affiliates with the mesa towers. Of course, you'll get Mesa Gilbert just fine on those towers.

Just getting caught up here; i,m sure most of us know rwc system is operated on what is reffered to as a smartzone;and you typically won,t hear butt what agency is in that area;you won,t hear east valley agencies on a west tower and vice versa;although i do sometimes hear phx popping up on a repeater in west mesa;and i have heard gilbert once or twice over on loop 101 and glendale;butt i believe those are isolated.

16492. Antenna recommendations

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-12-12 16:10:05 UTC
From: John LaBua
Topic: 16492 Message: 16492

Hi all,

I am now in the market for a new base station antenna. Mine was removed for relocation during a solar installation project and managed to get mangled up in the process. It was a RS discone antenna (Catalog #: 20-176 $27) and had been up on the roof for more than 12 years.

Now that I am in the market for another base antenna to replace it, I wanted to get some recommendations from the group. My normal listening bands are 800 Mhz digital trunked (Glendale with a secondary of Phoenix), and military and civilian air. Other bands on occasion but those are the primary ones. I am eyeballing the RS Catalog #: 20-043 but at $75 I want to make sure it is a better antenna than the other one for what I am using it for. I also know that I could probably build one for less money that would be better suited for my needs but that isn't an option for many reasons.

Would I be well served with my choice or should I just replace the original one with the same model currently available?

Radio Shack has a discone antenna cat # 20-043 for 74.99 that covers 25 to 1300 MHZ effectively and can transmit most ham bands with a gain of unity. If your local shack does not stock it, you can order it on Radioshack.com.

The 20-043 is better than the old one. Discone antenna's are typically zero gain, but offer wide freq range as you know. The vertical piece above the disk is for the lower bands (30 to 50 Mhz). This type of antenna is great for a typical scanner, since ant & radio are wideband. Most who buy a GAIN antenna for say VHF and UHF and live close to lots of RF, find front end overload a problem. Go for it. It will perform better than what you had.

Robert in Phoenix.

That's great, but how much is AZ sales tax and for those of us who need theirs shipped.
$425 + tax (.08)= $459 plus shipping. By the way, what is the sales tax?
ScannerMaster still would be cheaper with there free shipping at $448 shipped.

You might check out DPD Productions website, I use one of the railroad antennas. They do have antennas cut for other bands including aircraft. Even with the narrow bandwidth I was surprised by decent reception of the out of band frequencies I get with the RR antenna. They have always been helpful for me when I have contacted them with questions about anything.

Phoenix Police aren't going to be carried on Gilbert's towers unless
there is a Phoenix unit in Gilbert and I'm sure that doesn't happen
much.

Tempe tower carrying PPD might be reachable in some
areas of Gilbert but I suspect you might need a rooftop
yagi or discone antenna. One bad thing about digital
transmissions is they don't have the range of VHF or
UHF.

Radio Shack sells a all band discone that works pretty good.
A little pricey though.

I use a MFJ-1866 up here in Carefree and I get everything
in the valley.

http://www.gigaparts.com/store.php?action=profile&sku=ZMF-1866

My scanner is a GRE PSR-400

I live in gilbert and can pick Phx PD up off the Tempe site.

What scanner do you have ?

This is a smart zone system. If there are no radios in use in the area, the transmitters for that area won't transmit. So, if there are no Phoenix cops in your area to cause the Gilbert transmitters to transmit, you won't hear them. However, the Tempe and South Mountain sites might work for you, but not likely unless you have a decent antenna, preferably outdoors or at least elevated, or mounted on your vehicle.

You should be able to hear Mesa just fine in your area, and possibly Tempe Police. Phoenix is just too far away unless someone out near you has their radio on.

Good luck
Ed

16504. RE: [ArizonaScanner.com] Trying to get Phoenix PD programmed

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-12-19 14:37:01 UTC
From: Doc
Topic: 16483 Message: 16504

Not much difference between the 400 and 500.

Both are digital trunking scanners.

Yes a yagi in your attic would work fine but I
don't have a attic. Flat roof. So I stuck a
discone mounted on a 3 foot tripod on the roof.

The MFJ-1866 is also capable of transmission.
It doubles as a ham antenna on 2 meters.

One word of advice to anyone newly installing
a rooftop antenna. Remember to ground the
bloody thing. While tstorms in the valley are
not frequent, antennas are notorious lightning
magnets. A fire caused by an ungrounded
antenna will ruin your whole day.

16505. New antenna mounting

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-12-19 16:05:05 UTC
From: John LaBua
Topic: 16505 Message: 16505

Hi all,

Thank you to everyone who responded with their recommendations for my new antenna. I will probably be ordering one from DPD Productions this weekend (depending on how big a hit my cc takes buying Christmas!).

Now I need to ask for recommendations as to the best and easiest way to accomplish the mounting I want. As of right now I will be mounting several items on the mast at varying points. These items are an wind vane/anemometer for my weather station, scanner antenna and also a weather camera. Naturally, all these items are set up to be mounted on a mast of a specific diameter. I currently have a 3 3/4" diameter pole that stands approximately 12' above the ground. About 4' down from the top it is u-bolted to the house and the bottom is sunk approximately 2' into the ground and is surrounded by a concrete sidewalk. This pole used to be used as the mount for my 10' satellite dish so I know it isn't going anywhere anytime soon. I also have a 30' tall telescoping mast that I would like to mount to the existing pole in some manner so that the mast can be retracted when repairs or replacements need to be made from no higher than the roof of the house and then extended to the full 30' height for operation. I have thought about placing the telescoping mast inside the larger pole but it would need to be mounted securely in a vertical position for the weather instruments which would mean some sort of adapter to reduce the diameter of the larger pole to the diameter of the mast assembly (mast is about 2 1/2" in diameter for the lower section). I could also drill holes through both pipes and bolt it directly to the larger pole but don't want to weaken the poles by doing so. I will be mounting the scanner antenna at the top of the pole and the camera and weather equipment a few feet lower down the mast

Isn't there some clamps or brackets that are shaped somewhat like an X that will clamp a pole of one diameter to a pole or mast of different diameter? Where would I find these? Home Depot or somewhere else? Also, since I will be mounting several different items onto one mast, is there a way to mount a cross-mast so that two items could be mounted at one level on the mast? Is this something that I can pick up at HD or will it have to come from somewhere else?

I am open to suggestions as to best accomplish this setup.

John

I mounted several items on my tower by using a piece of angle iron (made from aluminum) I got at Home Depot. I drilled it so I could put 2 U bolts to fasten it to the tower. Thereby creating a yardarm. I would mount the antenna on the top of your pole, the weather station stuff on the yardarm and the camera just below the wx station but above the yardarm. Remember you have only the U bolts to support the yardarm, unless you can fab some kind of bracket. But definitely put the lightest item on the yardarm.

Yes it is legal to have a scanner in your vehicle unless you are using it in the commission of a crime. In which case you are dead meat. I have had a working scanner while I was talking to a DPS officer when he heard himself called on my scanner. No problem.

Date: Tuesday, December 22, 2009, 8:57 AM

Hi. Is it legal to listen to a scanner in an automobile in Arizona? A Google search didn't tell me. Thanks.

It is very much a touch and go situation and I would not push my luck. It is legal to have a ham radio that can receive police/fire/air/etc. Why not get your novice ham license? It is a simple 20 question multiple choice test given by your local ham club. Check out www.arrl.org/

Surprise PD is currently using encrypted talkgroup 4302 on the RWC. This talkgroup is active on the White Tanks site. Since this talkgroup is encrypted, it is not able to be monitored by any scanner.

Thanks for the replies. They are appreciated. The question was actually for my brother-in-law who is visiting from Washington State. I myself have no interest in either a scanner or a ham radio in my car.

Bobbie H.

Update your information! There no longer is a novice license. The entry level license is the Technician and it is a 35 question test with no code.

Morning,

Nothing "touch and go" about it in this state or anywhere in the west with the exception of Minnesota. Mobile Scanners are legal and there are no laws resrticting thier use with the exceptions of "criminal activity used in conjunction of or with...." which most all states have in one form or another. I also might mention that in some states, having a ham license will not protect your scanner in a mobile set-up. Again, not the case here

However, law enforcement can be a fickle lot so I wouldn't and don't draw attention to the fact I have one though it's in plain site. With all do respect to the other trucker that responded to this-I NEVER have mine switched on during road-side stops, inspections or inside scale facilities where the CHP is concerned. That state is too screwed up where my industry is concerned to take chances. And so far, to my knowledge-whereas radar dectectors are illegal for trucks under federal law, mobile scanners arn't.

According to "Monitoring Times" the rash of mobile anti-scanner laws after 911 and Homeland security overreaction is staggering and they still have not sorted themselves out. In parts of Florida, for example, it is illegal to buy a scanner at RS and take it home in your car. LAPD continually cites tow truck drivers for having scanners. If the state doesn't get you the city or county still could. CA state law says it is illegal use a scanner in the commission of a crime. Is speeding or running a red light commission of a crime? The individual law enforcement patrolman has lots of discretion that may cost lots money and time to mitigate if they decide to cite you for having a scanner.

I still recommend getting a ham license (I'd forgotten about dropping the novice license). Even if you get cited you may have a logical legal argument to have it dismissed.

Of course, your advice is best - use your common sense.

16522. Vhf Trunking

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-12-26 21:17:24 UTC
From: aar9sm
Topic: 16522 Message: 16522

Is anyone aware of any Vhf analog or P25 Trunking in Arizona?
1. If so what agency is using it?
2. What are the frequencies being used?
3. How did you set yours up?
4.I am using the BCT15 and the BCD396T.
Any help or info would be much appreciated

Also has anyone came across a 700 MHz LTR system in Arizona? Thanks to all who may respond!

Please goto the following link- http://www.afn.org/~afn09444/scanlaws/

This is the source for my information and has been years. And while I don't doubt your citing Monitoring times (a magazine I very much respect) plesase cite an article or issue number. I do think that being paranoid isn't an answer nor warrented. Dwelve too deep into the "Legalize" of wrttebn law and one wouldn't step out of the house for fear of "big brother". Is speeding commiting a crime? What's the intent? Is someone listening to a mobile mounted scanner intending to committ a crime or just being entertained? Wouldn't this be judged after the fact? Only after the "crime" can it be assertained if a scanner was used in the committing of that crime, not before. And city, county or federal officer would have to prove that I had already committed some act and that my scanner was part of that act. IF DPS here in Arizona pulls me over just for having a scanner, that officer better be prepared to justify that action in court. If that officer belives that a scanner was involved in some crime or infraction,, then he better be able to prove that as well and it better be part of the arrest or citation issued. Even radar detectors, which are legal in all big trucks under federal law, are secondary enforcement in most states.

With the exception of an isolated incident in Ohio several years ago, I have not experianced questions regarding my equipment from any Law Enforcement through numerous contacts with them. And I am not even sure that in most states, scanner equipment would be a priority enforcement issue assuming they even knew what to look for.

My answer on the getting of a ham license remains the same. I think that when one considers all the work it takes to get even an entry level license, that just to get one for the purpose of having a scanner is no justification at all. I think that a ham license is a proactive thing, and allows access to all sorts of oppertunitys within that broad interest. But if all one is going to do is get one just to carry a scanner in the car, then what's the point.

Not to mention that those ham/scanner laws tend to contain
language that deals with ham radios that are capable of
receiving public service bands. They tend to NOT cover
separate scanners that are not a part of a ham radio. And
the only pub svc bands that are included as receive on any ham
radio are the conventional analog VHF/UHF simp/duplex
bands. There aren't any ham radios that trunk or receive
pub svc digital. At least I don't think there are.

In Arizona it's only 'criminal', and subject to arrest, if the
citation is for >25 over the legal speed.
Otherwise it's a civil citation.

>What's the intent?

This is not a situation where intent is an element of the crime.
Usage in the furtherance of a crime is pretty straightforward.

BUT, I can find no reference in Arizona Revised Statutes [ARS] that
talks about any of this.
Interference with a public safety radio system, yes. Listening, no.

It is not that difficult to get an entry level ham license nowdays (Technician). NO code test, 35 questions on rules regulations and some basic electronics theory. If two of my friends 60+ yr old wives can get their license with only 1 week of study and no electronics background at all, then ANYONE can do it. Search for ham radio tests online.

I just watched a Big O Tire commerical in which the actor dressed as a store clerk points to a flip chart easel with specials on it.

His "pointer" is a Radio Shack telescoping, center-loaded scanner antenna!

So this is compatible with the Tempe & Peoria systems? I was looking at the Radio Shack PRO-106 and recall GRE made their scanners. Am I correct that this is the same radio?

Not exactly the same radio, GRE makes the PRO 106, just with a few changes. It does work on the Tempe and Peoria systems, actually all of the digital and non digital public safety systems in the valley.

Having a amateur radio license does nothing more than give you an arrow in your quiver. Buy the test book, read it on the way to the test, pass the test, done. Maybe 4 hours and $40. One day of lost wages spent in court (excluding lawyer) is many multiples of that...even if you win.

Do I think a ham license is that potent? No more than fighting your HOA with PRB-1. Sometimes you have to play the hand you're dealt. Why not give yourself an extra card?

Morning Walter,

Yep. You're right. Illegal is correct. Sorry for any misunderstanding there-I usually do these at the end of my "day" then head into the bunk for the next 10 hours. Always thought that was amusing in a way, really all radar dectors are, are scanners. And while I am not a big fan of "bird dogs", neithor do I belive banning them makes a hill of beans one way or the other.

Appreciate the clarification for "intent". I'm guessing though that in at least Arizona, the only way to know that a scanner had been used in a crime is after the fact. I'm not so sure that one could prove a scanner is being used in a crime before the crime has happened. I guess it's a red-handed issue-like being caught...

Anyhow, nice to see people engaged on this.

73,

Mark

According to Todd Sherman, KB4MMH, referencing his site at

http://www.afn.org/~afn09444/scanlaws/scanner5.html

there are no present laws on the books in Arizona.

BUT after a careful re-reading of the exemption for hams it appears the rule only applies to HAM radios WITH OUT OF BAND COVERAGE, NOT scanners used by hams.

I offer this interpretation FROM HIS SITE:

Regarding The Use Of Out-of-Band-Capable Amateur Radio Transcevers:

One word: P.R. 91-36 (a.k.a. FCC 93-410 in the FCC Record).

Regardless of what ANY local- (i.e., city/county) or state-level laws might say about ham transceivers capable of receiving police or related frequencies outside of their normal licensed range - for the ham, those laws do not apply. This, because the Federal Communications Commission actually preempted such laws in an Memorandum, Opinion and Order back in August of 1993. No law has ever been put forth by the FCC prohibiting such transceivers. No user has ever been prosecuted by the federal government for having such a capable transceiver; nor has any manufacturer been prosecuted for MAKING such a device. Finally, it is NOT illegal for anyone to monitor public service frequencies. To make such transceivers illegal under those lower-level laws would effectively render the whole amateur radio hobby illegal since out-of-band monitoring is a capability that most all modern ham transceivers have, and since most hams now own and USE such capable radios almost exclusively. Such laws also tend to encroach upon the regulatory playing field of the FCC. OOB-capable transceivers often are used to aid hams in the course of their public service duties, and this is in line with the goal of the hobby, per Part 97 Rules.

P.R. 91-36 (cited as "FCC 93-410" in the FCC Record) does not in its current form cover SCANNERS owned and used by hams. It ONLY covers out-of-band-capable amateur radio transceivers.

So having a ham license may not not be the solution and may not cover any other scanners you have in the car.

The GRE works perfect with all the valley systems. Receive is very sensitive. I waited for a Christmas sale & bought it at the sale price!

$410.00 from Pine Valley Tactical! After tax it was $435.00 with free Fed Ex shipping! Tax was not calculated until I created an account & was about to pay.

You can try simulcast C, without an outdoor yagi pointed towards Phoenix you probably won't get simulcast A. You might not be able to receive A with a yagi either. Simulcast C will get 400 all of the time and 800 sometimes and C decks when a unit in the simulcast C area switches to a C deck. I don't think A/B500,600,700,900 are allowed to come across on any simulcast except A. BTW folks the PSR400 is not a digital capable scanner and is nowhere close to what a PSR500 is.

Try the "Maritime" or "Marine" frequencies, located here:
http://navcen.uscg.gov/marcomms/vhf.htm

I live in a VERY active USGC area, between USCG Group Mobile (Alabama), and Pensacola (Florida, this Group in stationed on NAS (Naval Air Station) Pensacola - which I live right next to, and they use mostly the freqs you will see identified as USCG channels. They also communicate on the other Maritime freqs to conduct Helo/Plane/Cutters/Land based Stations to commercial/private vessels, and they also use UHF and VHF aircraft freqs as well, but I hear lots of USCG Helo to Civilian Vessel traffic on the Maritime freqs, as well as USCG Land/Ship to Aircraft comms on 21A and 23A ALL THE TIME!

Give those a try, and they are all in the 156 - 162 MHz range, there are some old freqs in the 140's to 150's MHz range, but I don't hear much if anything there these days.

Hope that helps,
Walter

Date: 2010-01-15 16:49:23 UTC
From: Mark
Topic: 16545 Message: 16545

ARRRGGGGHHHHH !

I have come to the conclusion that is time to replace the 396T with somthing more current. I came to that conclusion last week and have spent the tome between then and now looking at the 396XT and the PSR500. I have since come to the conclusion that this is driving me nuts!

The two are so close and offer much that the differences between the two are down to the tiny nuts and bolts-there really isn't anything significantly "bad" or "out-standing" to eliminate one or the other.

Pretty good for us consumers when the competitors offer a win-win situation for us. Can't go wrong with eithor choice.

Just a comment.

Mark.

You forgot the backup 440 machine which is what was actually in use
last night due to the power failure on South Mountain.

No only in Orange County, and San Diego at this time. During severe weather you can hear weather spotters give wind, rain, and other weather reports. In Oklahoma and Kansas the weather spotters talk to the weather station during tornado seasons. on yea topeka also. It is worth haveing the frequencies in your scanner even those who stream their scanners.

Do they happen to have skywarn in the sfbay area? I am out here visiting.

Thanks

I have been streaming the Coconino County Skywarn and Elden 2 meter net at www.Flagscanner.com. Just click on the NAU Police feed (I have diverted it to the above frequencies)

The Elden Net is being used in the Emergency Operations Center at CCSO Call Center.

I don,t typically monitor skywarn frequencies,butt i have in the past; butt if you live in an area prone to alot of storms and or during storm season; it does come in handy;have noticed during a storm event,that they are pretty active.

16555. Queston for the group

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-01-25 00:19:32 UTC
From: rgaun@aol.com
Topic: 16555 Message: 16555

In listening to the Phoenix Fire Dispatch I have noticed mutable units being assigned to the same talk group (re: K6, K7) on the trunked system. My question is; Are each of these talk groups divided into sub groups by area or are they using them the same as the old VHF channels.
I've been trying to catch up on the new happenings with the radio system in the valley since I'll be moving back there in April.
Thanks for whatever info you all can help with!!

K6, K7, K8 and K9 are the current 800 MHz channels being used for EMS calls. K6 and K7 are the primary channels. I believe they are divided east/west by Central Avenue, but please don't quote me. When a channel reaches a pre-determined threshold (I think 15 calls), additional calls will be routed to the alternate channel. K6 defaults to K9 and K7 defaults to K8. K10 and K11 are available if needed, but are not automatically assigned by the CAD system.

All "hazard zone" calls (fires, hazmat, etc.) are still on VHF.

I think his question, and one of my own, is regarding the problem that
was encountered on VHF.

If you're assigning a bunch of calls to K6, are they walking all over
each other and doubling? Or is the system such that each unit hears
nothing but the dispatcher assigned to that call? No other traffic?

Does that make sense?

Since 800 MHz trunked is nothing more than a glorified "repeater" system, all of the units on one channel will hear all of the other units on the same channel, including the dispatcher. They all hear each other. If the radio is in use by one unit, if another unit tries to key up, he gets "bonked" and cannot transmit. There is no doubling on the trunked system.

Ok. It's been so long since I played with 800 that I had totally
blanked out the experience...thanks to a lot of therapy.

Soooo, would it not make more sense to split the area up into more
channels, or does it come back to a manpower issue in the Alarm Room?

16560. Re: [ArizonaScanner.com] Queston for the group

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-01-25 14:57:26 UTC
From: Dan Danz
Topic: 16555 Message: 16560

You can't "double" on a TRS. The system controller accepts the PTT request, sets up one or more repeaters to carry the traffic, tells all members of the talk group to switch to that freq pair, then gives the go ahead signal (beep beep beep) to the unit that hit PTT. Another unit that tries to transmit at the same time gets a bonk tone.

On most systems, a console operator who is transmitting can hear a unit in the headset if one doubles at the same time as the dispatcher, but the received audio is not usually repeated. This helps if a unit has an emergency and the dispatcher is long winded :-)

Units and dispatchers alike also get bonked if all repeaters are busy.

I have no idea why it is the way it is. If I'm working K6, I'm also working K9, so it's still the same person working both channels.

16563. Re: [ArizonaScanner.com] Queston for the group

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-01-26 12:47:52 UTC
From: Ed (K9EDK)
Topic: 16555 Message: 16563

Work them separately or multi-select. Depends on call volume. Since it's all EMS stuff, there's not much talking.

From: Kenneth Howard
Topic: 16555 Message: 16565

Not sure i understood what your question just was; butt if i understood it correctly your trying to group these talkgroups together? Sort of like input and output;If that is the correct assumption; like the old vhf systems that some agencies still use;for example in new mexico a vast majority of your law enforcement and fire departments still use the old vhf systems;where they talk on 1 frequency and recieve on another;if that was your question;the way i have my scanners set up; i program the talk side then right behind it the recieve frequency;that way i still get both sides of the conversation. don,t know if i just confused you or not; but thats the way i think i understood your question.

16566. Re: [ArizonaScanner.com] Queston for the group

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-01-27 17:42:27 UTC
From: Mark
Topic: 16555 Message: 16566

Just a comment-never heard a trunk radio system, especially one as large as the RWC, referred to as a glorified Repeater system. Soo much more then that, considering the amount of traffic-both data and voice- it handles. :)

Confused by the orignal question also-

Mark

From: rgaun@aol.com
Topic: 16555 Message: 16567

I didn’t mean to start something here. My original question was really about the way the system is set up. As an example, in Clinton County, NY (right across the lake from me) their system has many talk groups however the talk group “channels” on the individual radios are different. There are 3 “Dispatch Channels”, North, Central & South, with “Dispatch” always on channel 1. Channel 1 is a different talk group in the units radio depending on which zone your unit covers. If you cross zones for mutual aid you use the mutual aid channel (talk group).
So, what I was wondering (and I was wrong from your generious responses) was if the K6, k7 Channels were divided into different talk groups depending on towers & area of the valley.
Well now that I muddied the water more, thanks to everyone for responding.
I look forward to more interaction when I leave the snow and ice behind to join you in the Valley of the Sun.

Yes, the RWC has several sites throughout the valley. The TGID is the same regardless of which site is being used. RWC is a SmartZone system, so if there are radios in a particular zone that are turned on, that site will not transmit. Phoenix has only one dispatch channel, which is currently being simulcast on the trunked system. Currently, all calls are dispatched on VHF.

Radioreference.com has all the sites/frequencies/TGIDs.

Topic: 16555 Message: 16569

Rich:

Regarding the Clinton County system you refer to:

"As an example, in Clinton County, NY (right across the lake from me)
their system has many talk groups however the talk group "channels" on
the individual radios are different. There are 3 "Dispatch Channels",
North, Central & South, with "Dispatch" always on channel 1. Channel 1
is a different talk group in the units radio depending on which zone
your unit covers. If you cross zones for mutual aid
you use the mutual aid channel (talk group). So, what I was wondering
(and I was wrong from your generious responses) was if the K6, k7
Channels were divided into different talk groups depending
on towers & area of the valley"

When I first read this thread, I was confused about your confusion on
the subject. Now I get it. And I can't think of a greater recipe for
confusion in a trunked system than the situation that you just
described. A talk group name is a talk group name, and it should not
change across the entire system. I would guess that the reason those
folks *need* mutual aid talk groups to talk to each other is because it
would be too confusing to explain which "channel 1" it is that they were
supposed to be responding on *today* <sigh>. K6 is K6 everywhere, for
everybody. Ditto for K7, etc., you name it. Not everybody in the
system needs access to every talk group - of course. But, best
practices for public safety trunked radio system design tells us that
the talk groups each of the users *do* have access to must be labeled
and called out identically across the system (and they are in the RWC)
so that there is no confusion.

Regards,

---Steve

The 'local naming' problem is the reason that the NPSTC has proposed
to the FCC, common naming for ALL the national interop channels.

You can see their proposal at
<http://www.npstc.org/channelNaming.jsp>

Around here, there are still radios that say 'USA-1' when the current
name is 8CAL90

WalterH

Then click on "Draft Channel Naming Standard" in the box on the right
side of the page

That would be nice if it worked. I have an example, and I can't disclose actual TGIDs.

Let's say for instance that Phx Fire had a Talkgroup A5. Now, let's say we needed to borrow the services of the Phx Police helicopter. Guess what? Phx PD already has a Talkgroup A5. Now what? Well, this has happened with a different TG and it requires that two TG's get patched together.

So, what may seem like the perfect system to some, really isn't.

That's why you shouldn't use the Zone (A) and mode (2) which refers to the physical location in the radio programming but rather the logical name programmed in the radio like PD500 or FIRETAC5. It's the same as never using codes when talking to/about another agency.

Even the same numerical TGID can be programmed multiple times in the same radio. For example, MCSO Info is C1 thru C6 so that units whose main channels are A1 thru A5 (different channels) can easily get to the same common Info by flipping the ABC switch that changes the zone A to C while keeping the same mode (1-5). It would be a lot harder if they made Info A10 or C7.

I think there be a lot less confusion if PFD would stop calling them KDeck7 and Call it FIRETAC1 or whatever the progrmed name is. Then it doesn't WHERE the TG is programmed in the radio.

As for the dept who programmed A1 differently depending on district, they might have been better off by programming Home to be different and keeping the numbers to be disticts and the same in all radios.

Just MHO.

From: Mark
Topic: 16577 Message: 16577

This is a "what if" so don't get on me hsving "wrong" info. ;)

If a Surprise radio were say, subscribed and affilated with the E system. If that radio were to fall out of range-like head to Phoenix or something, can that radio allilate with another RWC simulcast system or site and still be able to communicate with it's home group or would the radio just be "dead" till it came back into it's home system.

I guess I'm asking about roaming here. Will one system allow a non-subscribed radio to roam within it's area.

Just curious.

Mark.

I think that's correct. Suppose a Surprise officer went to Gilbert (definitely out of range of his or her home system). The Surprise officer's talkgroup should follow him to whatever tower he associates with so that he or she is still in contact with his dispatcher and other officers. This is how I understand how it works.

It certainly sounds like they are making big strides in the 800mhz transition. It went from BC area testing to full time digital EMS in roughly 2 months LOL. Have you heard any chatter about some fire related testing for the 800 system?

I,m not an expert by any means; butt if i understand you correctly; if you only have that specific sim group E for example and nothing else; most likely when you roam out of its area it will be prettymuch dead. every since phx rwc went up; i have compleatly programmed the entire sim group system including the intelipeaters;so that when i,m roaming i can still get most everyone on a variety of sim groups or simulcasting.I hope this anwsers your question. if anyone else out there has something to add; I,m open to suggestions and or comments.

From: Joe S
Topic: 16577 Message: 16582

Not all talkgroups are allowed to roam to other simulcasts, even if say a Phoenix PD radio on channel A9 were to roam to say the coverage of Simulcast C that radio will not affiliate with Simulcast C until the radio is on a channel allowed on simulcast C.

The Surprise officer's talkgroup should follow him to whatever tower he associates with so that he or she is still in contact with his dispatcher and other officers. This is how I understand how it works.

16585. Sick about Incident Broadcast Network shutting down

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-02-01 17:03:10 UTC
From: Bobbie Howard
Topic: 16585 Message: 16585

I loved the audio streams I was getting from the Incident Broadcast Network but suddenly they went dead and I just read that they have closed up shop. It was a free service apparently run by mostly one person. I am so sorry that it is gone now. Does anyone have any suggestions for sources for dependable feeds? RadioReference can be very spotty. I listen via an Internet radio. Any ideas would be much appreciated. Thank you.

I read the sob story about how the guy was
paying $200 monthly for his bandwidth.

Well, I say, nonsense.

Anyone that pays $200 monthly for bandwidth
and then complains about "no financial support"
for their hobby, has a very twisted view of how
things work.

From: Joe S
Topic: 16591 Message: 16593

The PRO 106 is not the PSR-300's twin the PSR-500 is the PRO 106 twin. I don't think there is a way to have the light come on when there is activity. It's either Normal,Keypress and Ignore options. Information on what these options do is on page 13 of the manual under backlight and contrast.

You're absolutely correct - should have taken a closer look at the specs for the PSR 300 (the Super Bowl was on - that's my story and I'm sticking to it).

Perusing the manual - it doesn't appear to have that ability. Maybe someone that owns one can tell you for sure.

16595. Coconino & Mohave Counties (NW AZ)

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-02-10 10:01:04 UTC
From: sfbayhooligan
Topic: 16595 Message: 16595

I'd like to get in-touch with anyone who is familiar with the public safety agency freqs in the above two counties. I'll be spending some time in them over the next couple months & would like to get their freqs programmed into my scanners.

I've tried the Radio Reference database, but it's the usual case of Garbage In, Garbage Out...

Thanks!

Tim

What do you mean by " garbage in and garbage out"? A lot of the data for Arizona on RR comes from the pages of the SWFD and is valid. I run I40 up and through Kingman, Laughlin and and in to or through Vegas a lot and have never had any problems with the RR data. The only issue I have had is with the Vegas PD moving to an-monitorable TRS. I do recommend the SWFD if you truly have a problem with RR.

Well, feel free to get back to me when you "run" through northern Coconino & Mohave with the freq dumps from RR.com in your radio & hear nothing on them, find active public safety freqs via Close Call that weren't in the RR database, and then you do an FCC database search & find a lot of public safety freqs for them that weren't in the RR database.

But one thing I agree with you on is that I'll have to get the SWFD.

Here's an idea. Contact the database administrator of RR and advise on the inactive and active frequencies you are aware of for those counties, . . . effectively 'taking out the garbage'.

Hi all,

Does anyone have an ARC500 file for the GRE PSR600? I am trying to understand how to arrange everything and keep it somewhat organized but apparently not doing a very good job of it. Also, if anyone on the list has one of these scanners, I'd appreciate an email address where you can be contacted off-list so as to not bother anyone else.

I was wondering if someone might be able to help me out with this. I'm new to the world of scanners. I have a pro-106 and I can get all the 800 frequenices listed on the cityofmesa website. But what I want are the talkgroups like you guys are talking about. [dig-p25] tg 3000, 3003, 3006, and 3009. How in the world do I get these into my scanner. I'm completley clueless to the whole process. I get entering in frequencies, but what do I do with these? Is there a way to listen in on these? I'm sure there is. I just needed to be pointed in the right direction I think. Hope someone can help.

Nope, not at all! If you read this article closely (maybe more
than once) you will see that PHI has gone the direction of the future...
everything is connected to the customers network, thusly giving remote
access to anyone, (within it's organization) with the right privileges
and software, to access their entire radio asset cache!

Basically, all of the radio's (towers) have been connected to the
customers LAN/WAN (Local/Wide Area Network), this gives them connectivity
from any location within their organization to be a "dispatcher"....
someone in Virginia could be dispatching helicopters in Tucson. The
RADIO's are NOT digital (at least not yet!), but the CONNECTIVITY between
DISPATCHER and the RADIO's IS!

From the article:
"Arinc deployed new digital command consoles and custom software at four
PHI Air Medical communications centers "

" also installed new digital network hardware at 53 new and existing PHI
air-ground radio sites to expand and enhance the network□s national radio
coverage"

"The new digital technology includes radio-over-IP (RoIP) capability.
Each center and its pilot-staffed emergency operations center (EOC) desk
can now communicate with PHI helicopter flight crews via any of the 53
radio towers on the nationwide network"

Clear as mud right!

A Pro 106 is advertised as a digital scanner and should have no problem decoding the digital talkgroups mentioned. Like any other digital capable scanner, it can't decode an encrypted transmission.

Hi Andy,

Bring sunscreen and your swim trunks. From your base area, you should be able to access: the 145.410, -, 141.3, an eastern AZ, western NM linked network; the 147.120, +, 162.2 Superstition ARC repeater; the 147.200, +, 162.2 ARA central AZ linked system.

See this link for all ARA machines, most of which are popular.

http://w7ara.org/Web/AraFreq.htm

Hope you enjoy your visit.

16612. Can't listen to broadcasts

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-02-17 01:11:44 UTC
From: Jack Sprat
Topic: 16612 Message: 16612

I'm having problems listening to MCSO and Scotts PD. I use freescan to program and choose mot2/p25 as I should. I ad the freq's for white tanks since I'm at 35th ave and Union Hills. Usually I get nothing. I'm using a better rubber duck antenna but it doesn't seem to help. I am using the scanner in my den wich has wifi and 2 computers. Anyone got any ideas or any way I can improve reception short of putting an antenna on the roof? Are there any companies that will install antenna's?

Dana

Flip over to 146.52 simplex.

There's a bunch of us that yack away on 52
pretty much all times of the day. Most of us
tend to be centered around the NW quadrant of
the Phoenix valley. But we've got a few players
in Gilbert/Mesa/Awatuke/Apache.

are you referring to security; or just operations in general; i was monitoring there security awhile back butt it was very quiet,never heard anything;so i believe the actual security operations must be on a different talk group and or frequency. i,ll research it alittle bit and see if i come up with any useful info. my son actually went to one and attends the other. I live in between both.

No it's not connected to the computer but yes I do program it with the computer.. I do have wifi, another computer and Tv in the Den. I actually programmed it to Thompson Peak for scottsdale and now can get a few broadcasts but not great by no means. I would have thought being over on the west side I would use White Tanks but that produces nothing at all. I do have one of those window antenna's so I will try that a little later. I'm thinking I need to get something on the roof, with home prices sinking I may be here longer of course. Anyone know of a place that can install an antenna?

>
> No it's not connected to the computer but yes I do program it with the computer.. I do have wifi, another computer and Tv in the Den. I actually programmed it to Thompson Peak for scottsdale and now can get a few broadcasts but not great by no means. I would have thought being over on the west side I would use White Tanks but that produces nothing at all. I do have one of those window antenna's so I will try that a little later. I'm thinking I need to get something on the roof, with home prices sinking I may be here longer of course. Anyone know of a place that can install an antenna?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-02-19 02:48:45 UTC
From: jack sprat
Topic: 16612 Message: 16624

Im thinking the same thing. Just went on a short trip and took the scanner with. I heard Scottsdale using Thompson Peak freq's. Heard them loud and clear. I get inside and the broadcast goes to crap. Def an interference problem. I'll check out your control channels and use those. Maybe when I transfer the freq's to freescan something happens. I'll let ya know on my progress and thanks for the help.

From: Mark
Topic: 16614 Message: 16626

There are two or three programming packages around-that would be probably the best thing. For the long term too as systems continue to go through the re-banding process.

16627. Arizona HB 2514

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-02-22 16:59:03 UTC
From: David.
Topic: 16627 Message: 16627

Last summer I heard about a bill that I think was called HB 2514 had passed by the Arizona legislature to overturn HOA rules about outdoor ham radio antennas and to allow them if they are reasonable height. Since the bill was passed does anyone know what happened to it and is it due to come up in the senate and be voted on? if so when?

You are mistaken.
It was NOT passed.

This year's attempt is HB2615 and is moving smoothly through committee.

16630. PRO106 & software

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-02-25 02:23:59 UTC
From: trunkh8er
Topic: 16630 Message: 16630

I have always hand-programmed my radios, but these things are starting to get rather complex. It appears I have three options for software to prgram ny new PRO-106: Win500, ScanControl and ARC500.

I'd love to hear some opinions about which is my best option.

16631. Online Tucson Scanner

Topic: 16631 Message: 16631

I have set up a Tucson police scanner online. It is free and the address is:

http://www.radioreference.com/apps/audio/?feedId=2892

It can be a lot of fun to listen to. Pass it on to anyone you think might like to listen.

Thanks,

Jeff

Just wanted to let you all know I downloaded Win500.
Works great. Thanks to all that offered to help.
All I can say to the guys that wrote the manual for there scanner,
is, get another job. Your programming instructions in print suck.

Thanks again to every one that mailed me.

I use WIN500, mainly because I've used all Don Starr's products for previous scanners and they work great. I also like it for the remote client functions that work on my phone and Windows computers. I can leave WIN500 running at home with scanner plugged in start WIN500client on my phone and listen while on the go.

Hi Jeff, thanks for setting the TPD feed up. The feed has nice crisp audio, which can be kind of tricky with some TPD reception. Any plans to setup a regional fire feed on Radioreference?

Jason

From: Jack Sprat
Topic: 16639 Message: 16639

Just purchased a Pro 96. I used Arc96 to program it and that went pretty smooth. I can not listen to PHX PD or PHX fire at all. Mostly when PHX PD comes in it's squaky and sounds like crap. Glendale comes in just fine so I know it's decoding P25 systems. I did try the Attenuator and seems like more stuff is coming in but it's garbled as hell. Is there something I'm missing?

I actually did try the 1.4 and even moved it back to 1.3 firmware. Seemed that if an area or precinct was farther away it would decode better. I had no problems at all with the Glendale P25 system. Oh well. It's too bad, I would have loved to have a radio for the car too.

16651. Surprise & Buckeye PDs

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-03-28 04:07:41 UTC
From: trunkh8er
Topic: 16651 Message: 16651

Is Surprise still on the Phoenix regional 800 system? If so, which frequency group should I be using/

Is Buckeye PD still on that shared system? I can't get a control channel lock.

Thanks!

16652. Apache Junction PD

Ok where did these guys go? Their talk group is now silent
Any ideas?

16653. PSR500 and Ltrunker

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-03-30 03:50:33 UTC
From: Mark
Topic: 16653 Message: 16653

Okay,

1. I am not sure if that is the name of the program-LTrunker so please enlighten me if I got that wrong.

2. Is it possible to correctly follow the current Pima Co. LTR system with the psr500 in conjunction with the Ltrunker(?) program?

I'm going home this week and thought I'd try it if possible.

Mark

16654. Tucson Ham Radio Picnic Is Coming

*** Tucson Ham Radio Picnic ***

April 10th

It's almost here. The spring edition of the Tucson Ham Radio Picnic is about to take place. Please join us on Saturday, April 10th at Christopher Columbus Park on Silverbell Road at Noon in Northwest Tucson for this great annual event. Please see website for map.

One major change this year..... This is a Potluck Picnic. This year, we are still asking everyone to bring a dish to share which can be one our suggested items already on the list, or your own suggestion. Now for the change.... This year, we are asking everyone to bring their own drinks and ice. This way, you can have what ever YOU want to drink. Please view our potluck list at www.tucsonhampicnic.com and let us know what you would like to bring for the Potluck. In the past, it has never been fun to try and keep ice cold and frozen in a bunch of kiddy pools and it also usually makes a very big wet muddy slippery mess.

Our Ramada at Christopher Columbus Park is excellent for the family. There is a playground right next to our Ramada. There's a lake for you licensed fishers. Plenty of room for the kids and adults to run around.

We are also looking for demo stations. Feel free to set up and operate a station and help promote the hobby to the public. If you are bringing a demo setup, please let us know so it can be added to the website.

Talk-In will be on 146.520 Simplex.

This is a family event. Bring the whole family out to this wonderful event. The kids will have a blast.

Please help spread the word about the Picnic and forward this email to all your Ham Friends and spread the word over the air.

See ya at the picnic.

I believe you would still need a data slicer and to discriminator tap the PSR500. I know it outputs data through a disc tap built in, but that only outputs data from recognized formats for example EDACS,Motorola,P25 and standard LTR but not multinet.

16661. Finding the strongest signal control channel on the RWC

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-04-03 17:32:35 UTC
From: joescholz
Topic: 16661 Message: 16661

Hello group.
I would like to find the strongest RWC control channel to my home near I-17 & Bell Road. Is this just a matter of entering a single frequency one at a time while comparing signal strength? Or,can I enter all of them, and it will use the strongest signal?

Thanks for any help,

Joe

Probably Site 6 (Simulcast A) would be your best bet for your location. It's at 10600 North 7th Street. I would think that would be the closest to your location. If you have an outside/elevated antenna you might want to set your attenuator since your antenna may see several sites at once and get confused.

16665. Phoenix FD VHF Channels?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-04-11 22:05:55 UTC
From: kb7aqd
Topic: 16665 Message: 16665

Now that Phoenix FD uses 800 MHz, what are the older VHF channels used for?

I have a Yaesu FT817 that only receives below 154 MHz, so I can only program in the following:

151.370 North Phoenix, North of CAP canal
153.770 South Phoenix, Maricopa
153.830 North Phoenix, South of CAP canal, Scottsdale.

The 153.830 channel used to buzz with calls. Now, I hear some activity, but not much.

What is Channel #5 used for now?

73

No change on the VHF channels except that they are utilized for
multi-company responses and "hazard-zone" calls. Most EMS calls have gone to
800 MHz, but everything else is still on VHF.

Ed

At 3:50 PM it's on Phoenix FD 1, 4 and 9. It is comming from a transmitter other than the one PFD is using, and is pretty strong at least in the West Valley. Sounds like a constatnt tone, but the carrier just comes on and off.

Glendale comes in just fine so I know it's decoding P25 systems. I did try the Attenuator and seems like more stuff is coming in but it's garbled as hell. Is there something I'm missing?
>

The prob with Phx Fire started less than 24 hours ago. Between Metro Center and Bell Road the interference is loud and clear. Sounds exactly like my memories of trying to earn a scout merit badge for Morse Code, back about 1952.

Professional Morse trans are just a blur to me, but this sounds like a novice (slow). However, I have heard no comments by dispatch concerning the problem, so I don't know if the prob is external, or something in the Phx system.

The main thing is "It is NOT a prb with your radios".

It's strong in the East Valley as well, full scale at 40th St/I10 on my mobile rig, but not close enough to pick up on a handheld with no antenna. It's been doing this since about 11am. Phoenix FD will not be utilizing channels 9 and 13 until it's fixed, but can't abandon channel 1.

Pretty much every VHF channel in the west valley for the phoenix system has gone bonkers. I switched over my scanner from vhf to digital and heard phoenix dispatch say that they are having major radio malfunctions right now and that techs are working on fixing the problem asap. Best bet for now is to stick on 154.190 the vhf dispatch which will still get active, but kinda scratchy, and instead of radio silence when the channel is not active, its just beeping probably a damaged transmitter tower from wind or something, been going on for a few hours now.

Probably some Moron that just got an ALL-MODE Ham Radio and is sending the "CW" in the "FM" Mode on VHF just because they can! We had idiots like that around here, started a fox hunt and caught them! They got one heck of a Fine (From the State and the FCC), and I think 3 years supervised probation with the understanding if they messed up once (drank a beer even), it was 5 years in prison!
Get some RDF (Radio Direction Finding equipment) or if you have Attenuation and signal strength on some of the "better" scanners, use the ATT. and squelch, adjust them to higher attenuation and squelch to where it just breaks the squelch, while driving in a "grid with at least 2 preferably 3 vehicles that can stay in communication with each other. Start with an external antenna, when it is where you are close enough with attenuation and squelch set on full and you still here the signal, turn the squelch and attenuation back to "open" or "full sensitivity" and go to a "rubber duck" and adjust again until just breaking squelch. Finally, when it can "peak out" the s-meter and break full Attenuation AND Squelch on a "Rubber Duck", remove the antenna, go on foot with ALL vehicles, best when you have 3 positioned at ~ 120 degrees of where the signal is thought to originate, and move in slowly, making sure not to trespass unless you have Police presence to take the person in custody, and you should get within just yards (close enough to see an antenna on a car or home or "Home Tower"), then let the police get the proper search warrant(s) if needed, but with 2 or 3 sets of RDF units, it should be "probable cause"! Who knows, you may get inducted into a City or County "Task Force" should the problem happen in the future? I personally know people that have. And even got a small ceremony at the County Commissioners Office and Commendations!

You really think "some Moron" has figured out how
to transmit on several out-of-band frequencies
at once and cover the entire Phoenix valley plus
Wickenburg, Apache, Camp Verde, Tonopah, Casa Grande?

Quite a scenario.

I want a VHF radio/antenna that will do that!

To an experienced Ham this is definitely not CW but an intermittent transmitter causing intermod on several frequencies. We were getting it on 154.280 up here in the Congress area above Wickenburg. Really annoying.

I had a friend in the Glendale area put his phone by his rcvr, it sounds exactly like the intermod we get here from Eglin AFB. Not sure what it is, but some of the Air Force hams say it is a pulsed radar? That is the extent of my knowledge on this end. Could be something different there though?

16687. Question for the Group

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-04-23 03:08:29 UTC
From: Rich Gaun
Topic: 16687 Message: 16687

I have just moved back to the Valley after 25 years. I'm currently in the Sun City area. I have a a BC996XT and have programmed all the trunked sites and the talk groups for Phoenix Fire. I also have the VHF conventional channels. I'm receiving the VHF of course but nothing on the trunked system. I was in Flagstaff and Albuquerque over the weekend and was receiving their turnked systems just fine. So, what am I missing?

Thanks for any help in advance.

Rich Gaun

Phoenix Fire isn't completely using the trunked system for all calls
yet. The majority of the calls are still handled on the VHF channels.

I wouldn't say the majority, but a good number are still on VHF. Routine EMS calls are handled on 800 MHz in about half of the cities serviced by the City of Phoenix Fire Dept., primarily on channels K6 and K7 with K8 and K9 as the back up channels. All fire calls are still on VHF

From: Roy Schahrer
Topic: 16687 Message: 16690

Not sure where your information is coming from, but the users of the Phoenix system are using the trunked talkgroups on most non hazard calls. Structure fires and Hazardous material calls are sent to the old VHF channels due to concerns with in-building coverage of the trunked radios. Just listen to the channel 1 dispatches and you will hear MOST traffic being sent to the K Deck trunked talkgroups not the VHF A Deck or B Deck channels.

As far as hearing the trunked talkgroups, it sounds like the radio is not programmed correctly. What simulcast site are you listening to?

I have all the sites in the valley (14 total) programmed into the radio &
all the fire talk groups (36 total). The only muti site I have programmed
before was the Albuquerque system. I was wondering if I have too many sites
and the radio is confused.

>

The prob with Phx Fire started less than 24 hours ago. Between Metro Center and Bell Road the interference is loud and clear. Sounds exactly like my memories of trying to earn a scout merit badge for Morse Code, back about 1952.

Professional Morse trans are just a blur to me, but this sounds like a novice (slow). However, I have heard no comments by dispatch concerning the problem, so I don't know if the prob is external, or something in the Phx system.

The main thing is "It is NOT a prb with your radios".

>

The prob with Phx Fire started less than 24 hours ago. Between Metro Center and Bell Road the interference is loud and clear. Sounds exactly like my memories of trying to earn a scout merit badge for Morse Code, back about 1952.

Professional Morse trans are just a blur to me, but this sounds like a novice (slow). However, I have heard no comments by dispatch concerning the problem, so I don't know if the prob is external, or something in the Phx system.

The main thing is "It is NOT a prb with your radios".

Hi Tom i did the cruise on the Dawn Princess very nice up there. What you want is to program up the Marine band and Put Marine CH-13 as the primary
this is the bridge to bridge channel and you will here your ship talking to other ships. Also here is a link to Vancouver VTS and it has maps and what Marine Channels
to use in that area. http://www.worldvtsguide.org/MenuPages/CanadaMenu/Vancouver.html As for the ships internal communications i did a search and didn't come up
with much most of it is pager stuff. Here is a link to the Marine Frequencies and Channels http://www.navcen.uscg.gov/marcomms/vhf.htm. When you go take notes
and if you could post what you heard and what channels are used up there its been 5 years since are cruise up there enjoy.

From: reject4581
Topic: 16705 Message: 16705

Well I am in the market for a new scanner and before I shell out a lot of hard earned dollars I am trying to determine the difference between these two models.

So those who can give me insight, other than the look and feel of the case of the radio, are there any other pros or cons with going with one of these over the other?

I appreciate the input.

Topic: 16705 Message: 16706

The internals of the radio and functionality are the same. The 500 comes with the programming cable and AC adapter, where these are extra purchases with the 106. GRE releases new firmware for the 500 before the 106. Below are links to Wiki pages on Radio Reference that has more information on the radios.

16707. Phoenix Zoo Rangers, Veterinarians, Staff Use Motorola Digital VHF Rigs

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-05-16 20:27:13 UTC
From: kb7aqd
Topic: 16707 Message: 16707

They still use the following frequencies:

151.745

151.925

I did not see what specific Motorola handhelds they were using, but they are black with a silver front and a keypad, with a VHF rubber duck.

The signal sounds like P25, with a long phase tone and then a digital stream, with brief bursts of data between transmissions. According to one zoo staff member, they obtained these new digital radios a few months ago.

I don't have a digital rig, so if you visit the zoo, see if you can copy their communications, if it's not a proprietary nor encrypted mode.

Zoo volunteers, on the other hand, use Midland GXT FRS/GMRS radios:

462.7125 Channel 7 with an 85.4 Hz PL tone.

The other 13 FRS channels are filled with visitors, nearby business comms, and hikers in Papago Park.

Crane operators use:

451.800 Simplex

From: Jon M. Hanson
Topic: 16699 Message: 16721

How exactly would that work? Cruise ships can go internationally where the frequncy allocations may be different than their home country so I would think that they just couldn't use their radios everywhere they went (other than the international marine VHF channels). Of course if the ship never goes internationally then it wouldn't be a problem. Even using the FRS/GMRS radios internationally may be trouble.

16722. Alaska Cruise

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-05-28 15:26:01 UTC
From: ecps92
Topic: 16699 Message: 16722

Only in port, would there be issues, and due to the short term nature of port visits, most interference issues are never followed up on or found/tracked down. The Web page has [frequencies] info on the various Int'l agreed upon channel plans, but that doesn't hold ANY water.

The Basic pairs are [altho when you browse the web site you will see amateur and other freq's in use]

457.5000/467.5000
457.5250/467.5250/467.7750
457.5500/467.5500/467.7750
457.5750/467.5750/467.8000
457.6000/467.6000/467.8250
457.6000/467.6250/467.8500
457.6250/467.6250

Any of the Freq's could be the Rptr and the other two would be chosen for the input. There is nothing set in stone as to which frequency is to be the Repeater

As to FRS/GMRS, yes ILLEGAL to use outside of the USA/Canada, unless you have one of the USA/Canada/Mexico ONLY type accepted radios, but who reads the rules. Just like the British coming over here with the PMR radios [our Amateur bands]

From: Dan Danz
Topic: 16717 Message: 16723

Law enforcement is contracted to MCSO and uses the Maricopa County P16 radio system with digital talk groups. Traffic is dispatched on East Main. Also East C/C, East TAC, and East EM. Units are in the District 6 (QCK) 600 series beats 65*, detectives 61* and admin 68* plus mesa district 1 beats 121 and 127 and maybe 122 which are nearby. I suggest you program Thompson Peak, SE Courts, and Chandler fire station towers for the system.

Fire used to be Rural Metro and still is for San Tan area, but QCK fire is dispatched by Mesa fire now. Stations are staffed by Gilbert under contract last I heard.

16724. Southwest Amb Ch. 12 off-frequency?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-06-03 05:32:22 UTC
From: John Henry
Topic: 16724 Message: 16724

Hey all,

Has anyone else noticed that Southwest Ambulance ch. 12, which is supposed to be on 460.5500, actually sounds better on 460.54375? This is where my GRE PSR-500 stops when in search mode, with the "zeromatic tuning" that is supposed to zero in on the actual frequency and not slightly offset from it like many (older?) scanners.

And it sounds cleaner on 460.54375 than it does when I force it to 460.5500. It sounds scratchier on 460.5500 than it does on 460.54375.

So I'm wondering if the radio techs deliberately or accidentally programmed Southwest's radios that way, or if even the FCC assigned them to 460.54375 and not 460.5500?

John

You're going to be out of luck since they are P25 digital and
sometimes encrypted.

I noticed the same thing; when they went digital a year or so back;i had taken the frequencies out of my old scanner;and not long ago ;experimenting;re-entered some of them on my digital scanner; once or twice here and there have heard tidbits on the dc setting;butt not much;prettymuch all digital.

That would be 6.25 KHz below their assigned frequency.
And that would NOT be an assigned frequency in the valley.

On UHF, they can be up to 1.15 KHz above or below the assigned
frequency and still be within specs.

They've moved to a 700 MHz, P25 trunked system, that's attached to the RWC.

You need one of the newer digital scanners to pick up this system. I have a Uniden 396XT, which can decode this system. I haven't kept up with the Radio Shack/GRE models for a couple years but they have digital scanners as well that can decode it as well. If you don't have a digital scanner that can decode P25 trunking that's been rebanded then don't even try because all you'll hear is noise (there is no analog audio at all).

I can't hear Peoria PD at all, I changed the freq's to what they should have been and changed the talkgroups. For some reason the download from RR awhile ago had it as Sim A. I don't think I'm too far to hear something, 1_17 and Union Hills. Using BC396xt and stock antenna. Any help greatly appreciated.

16738. Phoenix p.d traffic bureau

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-06-08 21:20:37 UTC
From: Kenneth Howard
Topic: 16738 Message: 16738

Question for the group; has anyone ever noticed these patrol cars wondering around; they are clearly marked ;Phoenix police traffic bureau.they look slightly different than phx police cars,but have red/blue lightbar,and a uniformed officer driving it; i see one on a regular basis in the mesa/chandler area;and makes a regular stop at the srp agriculture yard on alma school south of guadalupe. just wondered if anyone;ever noticed these guys wondering around and what they do?.I,ve actually seen these patrol cars wondering around the east valley for a number of years and wondered what they do.?

You need one of the newer digital scanners to pick up this system. I have a Uniden 396XT, which can decode this system. I haven't kept up with the Radio Shack/GRE models for a couple years but they have digital scanners as well that can decode it as well. If you don't have a digital scanner that can decode P25 trunking that's been rebanded then don't even try because all you'll hear is noise (there is no analog audio at all).

Are you sure it doesn't say "Phoenix Metro Traffic"????
<http://www.phoenixmetrotraffic.com/>

That's a private traffic control company used on things like funeral processions.

Last time I saw them, they had Crown Vics and MotoGuzzi's.

I can't hear Peoria PD at all, I changed the freq's to what they should have been and changed the talkgroups. For some reason the download from RR awhile ago had it as Sim A. I don't think I'm too far to hear something, 1_17 and Union Hills. Using BC396xt and stock antenna. Any help greatly appreciated.

I believe those are funeral escorts. There was some buzz at one time
about the fact that they looked too much like official police vehicles.

They are NOT COPS and therefore won't be on the RWC.

I can't find an FCC license in the ULS for anything close to that name, and I can't see Radio Reference from work.
Maybe they're using MURS radios?

In the SWFD, I see 'Metro Protective Services' on 461.25 and 461.55, and 'Metro Security Services' 460.925, 461.000, 460.9375, 460.9875, 465.9375 and 465.9875.

Did you go to their website
<http://www.phoenixmetrotraffic.com/about_us.htm.>
and look at how they're marking their vehicles?

It also says that they will provide security and private patrol services.

16752. 800 MHz Standard Repeater Question...

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-06-12 20:57:58 UTC
From: kb7aqd
Topic: 16752 Message: 16752

I have a VR120D Yaesu scanner, among others, that can pick up standard, non-trunked 800 MHz repeaters.

I have programmed in the following:

Sun City Sheriff Posse
Tolleson PD
Paradise Valley PD
Goodyear PD
927 MHz ham repeaters
Intersystem 866.0125 etc.

What agencies still use FM mode, non-trunked repeaters and simplex in the 800/900 MHz range?

Using Radio Reference, how would I separate the non-trunked from the trunked services?

Or did you try this website http://phoenix.gov/POLICE/trafen1.html? There are plenty non PD users on the RWC, the talkgroups for traffic bureau are 2973 for traffic south and 2989 for traffic north unfortunately you won't hear anything because they are encrypted talkgroups.

I have been watching this post for a good week now, Is it possible that they not only do escorts . I think the link to their website showed they also do private patrols functions as well.That would explain why the seem like they are always there.and getting paperwork. As for their powers for arrest. I somehow doubt they have anymore then a normal armed security officer.. IE citizens arrest. powers. unless they are a retired law enforcement officer. I have worked in that line of work. and carried all the same gear as a police officer. we just had tighter rules about use. I hope this helps explain some of the strangeness. But I still find it hard to believe that City of Phoenix would allow them to use anything close to what their cars look like. Or D.P.S. for that matter. Every Company Operating has to get approved for badges and uniforms thru D.P.S. So they are not coping any law enforcement agencies in AZ.

From: Al Gonzalez
Topic: 16738 Message: 16761

Okay, I just want to clear the air. I think people are getting things confused. First "Phoenix Metro Traffic" is a private company that only does motorcade escorts, and are based out of Mesa. They are not a security company, THEY DON'T HAVE A SECURITY GUARD AGENCY LICENCE with DPS.

Since they don't perform functions as security guards, they don't fall under ARS 32-3601-16 with defines Security Agencies. So that is why they can can use police like uniforms and badges, because they are not regulated like security guards. However in ARS 28-776-C, the Escort Company must register with the local Sherriff's Department. It also states

"the driver of a properly equipped and registered funeral escort vehicle or military escort vehicle has all of the rights and privileges of a driver of an authorized emergency vehicle proceeding to an emergency call as provided under section 28-624."

This is why they can have Red and Blue lights just like the police.

Now, Phoenix Police has a Traffic Bureau, these are sworn police officers that are tasked with routine traffic enforcement and accident investigations citywide.

Also I assume since Phoenix Metro Traffic is a motorcade company; there might not be a need for long range communications. That is why they don't have an FCC license, they might be on MURS like someone else mentioned earlier.

I hope this clears up things for everyone.

I have a VR120D Yaesu scanner, among others, that can pick up standard, non-trunked 800 MHz repeaters.

I have programmed in the following:

Sun City Sheriff Posse
Tolleson PD
Paradise Valley PD
Goodyear PD
927 MHz ham repeaters
Intersystem 866.0125 etc.

What agencies still use FM mode, non-trunked repeaters and simplex in the 800/900 MHz range?

Using Radio Reference, how would I separate the non-trunked from the trunked services?

I would say that is a reasonable response to me; a few years ago i worked with a gentleman that split his time with one of those escort companies;butt at that time;this was in the mid 90"s;i was,nt that curious about funeral escorts;butt he used to ride his marked motorcycle to work;that also had the red lights and siren etc. on it.

I have been watching this post for a good week now, Is it possible that they not only do escorts . I think the link to their website showed they also do private patrols functions as well.That would explain why the seem like they are always there.and getting paperwork. As for their powers for arrest. I somehow doubt they have anymore then a normal armed security officer.. IE citizens arrest. powers. unless they are a retired law enforcement officer. I have worked in that line of work. and carried all the same gear as a police officer. we just had tighter rules about use. I hope this helps explain some of the strangeness. But I still find it hard to believe that City of Phoenix would allow them to use anything close to what their cars look like. Or D.P.S. for that matter. Every Company Operating has to get approved for badges and uniforms thru D.P.S. So they are not coping any law enforcement agencies in AZ.

I've been reading this post for a week now also. I think there is at least 2 different groups going on here. I personally know that the funeral escort company that uses the Moto Guzzis is a private business and has nothing to do with the Phoenix PD. Their bikes do look like police bikes, have all the same light kits as the motorcycle police. They do mostly funeral escorts but occasionally other escorts (such as when the Pope came to Phoenix). I remember that there was another funeral escort service that used Gold Wings, not sure if they are still in business.

Yeah I think we're all getting a bit confused here. I was think of the Phoenix PD traffic bureau, the motorcycle officers. I'm aware there is also a transit bureau that does have non POST certified officers, but the commanders are POST certified and they operate on the RWC.....

16769. Re: Sporting event frequencies

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-06-17 00:15:58 UTC
From: kb7aqd
Topic: 16754 Message: 16769

Try these common business frequencies for a start...

Motorola GT Radios:

464.500
464.550
467.7625
467.8125
467.8500
467.8750
467.9000
467.9250

VHF "Dot" and "Star" frequencies:

151.625
151.955
154.490
154.515
154.540
154.570
154.600 MHz

When I was at the Phoenix Zoo, I heard a number of people on the Family Radio Service and GMRS channels from the nearby municipal stadium and golf courses:

FRS: 462.5625-462.7125 and 467.5625-467.7125 MHz
GMRS: 462.550-462.725 MHz

Also, try these Special Industrial frequencies. They are normally used for road construction, but some businesses use them for maintenance and security operations, as at the TPC in Scottsdale:

158.400 and 451.800 MHz

Ham operator simplex FM:
146.520 147.480 446.000 and 446.050 MHz

The last frequency, 446.050 MHz, is called "Incident" around Arizona, and you will hear ham volunteers at marathons and bike runs on weekends.

I always load these into my scanners, as more and more businesses purchase these handheld radios. Once the Family Radio Service was established around the year 2000, businesses purchased the toy radios for work -- then discovered that kids already were enjoying these little radios. So, the business owners upgraded to professional radios, and all the activity went up there!

Check the listings in the back of the Southwest Frequency Directory for more business frequencies, but the ones I have listed will offer you the most radio traffic at almost every sporting event, zoo, college, or shopping mall. Climb Squaw Peak, Hole-in-the-Rock, or Lookout Mountain, and your scanner will be filled with all the radio chatter you can enjoy!

Let us know what you hear...

It's better if you log all of your finds on http://radioreference.com.
It lends itself as a better place for logging found frequencies than a
mailing list.

From: mayberry85239
Topic: 16776 Message: 16776

Can someone please inform me whether the Scottsdale Police Department operates on an analog 800 Mhz. system similar to the Chandler P.D., and if so, what are the primary frequencies on which to listen to Dispatch and patrol car traffic?

Thank you in advance for the information.

John N7LQR

16777. RE: [ArizonaScanner.com] ? on Scottsdale P.D.

From: Dan Danz
Topic: 16776 Message: 16777

Scottsdale PD uses mostly analog but some digital talk groups on the Maricopa County System along with the sheriff and other agencies. Scotttsdale is primarily on the Thompson Peak site unless a unit affiliates with one of the 32 other towers. Requires a scanner capable of scanning APCO P16 (3600-baud control channel). Digital audio for those few talkgroups that are digital requires a unit also capable of P25 DIGITAL AUDIO. The very latest scanners that also cover P25 SYSTEMS (like Phoenix, Mesa, Tempe) etc. can be used but are not necessary if Scottsdale is all you want.

Programming/frequency information in SWFD or at RadioReference.com

Can someone please inform me whether the Scottsdale Police Department operates on an analog 800 Mhz. system similar to the Chandler P.D., and if so, what are the primary frequencies on which to listen to Dispatch and patrol car traffic?

Thank you in advance for the information.

Yes they do as far as i know;Via MCSO System;Butt there portion is simaliar to sun city posse; its analog. never tried soley monitoring scottsdale from an analog scanner since the digital age has come about;butt from what i,ve read on the site from other scanner buffs;you can.on my digital scanner it indicates wether there talking digital or analog when talking and when i,m hitting on scottsdale it just indicates (MO) which is motorola Analog).So ide say yes.

16780. Chandler Fashion Square

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-06-29 14:25:35 UTC
From: Denise
Topic: 16780 Message: 16780

I looked for the frequencies for Chandler Fashion Square in the 9th edition of the Phoenix/ Tucsin Metro guide from www.arizonascanner.com. I came up with: 461.4875, 461.5875, 461.9125, 462.1375. I didn't hear any activity on these. Does anyone know if they changed frequencies, and what the new ones are?

Thanks,

Denise

Chandler Mall use's a 3 channel LTR system

451.5625
451.6125
452.8875

Be advised scanners and other two radios are banned in all Wescor malls

Hi All.

In spite of their YP license, they are NOT trunked and have three more simplex channels. They are low power (2 watts, 6 watts ERP for the repeaters) so you have to be in the area to pick them up. Here's what I got:

452.8875 DCS 466 - Security
451.5625 DCS 565 - Maintenance
451.6125 DCS 654 - Janitorial
456.5875 --------- Simplex Unknown Use
456.7125 --------- Simplex Unknown Use
456.7625 --------- Simplex Unknown Use

Regards,

Gaston

It's actually the City of Maricopa. (It's in Pinal County)

There is a PCSO Substation out here, but we have our own PD and Fire Dept as well.

154.220 is Maricopa PD
158.760 is Pinal County SO (listen for Area C units. Those are West county units)

Maricopa FD is dispatched by Phoenix Regional, on Channel 1 (154.190) and responds on Channel 8 (153.770)
Listen for Units in the 571-575 prefix.

Dave in Maricopa

Maricopa have their own Police Force, also Maricopa is actually in Pinal county. I believe they are using a frequency in the Pinal County Sheriff Frequencies. Dispatch non emergency number is the same as the one for Pinal county Sheriff Office.

The DOJ channels are implemented as multiple talkgroups on the Regional Wireless Cooperative (Phoenix), a very large P25 system.. simulcast A carries them for sure, not sure about the other simulcasts.

http://www.radioreference.com/apps/db/?sid=2508

Look in the interop talk groups listings on those pages . They're tagged like:

2852

b24

D

MESAPD-VALLY

Mesa PD-to-All Valley Police Departments Link

Yes, BCD396(x)T, BCD996(x)T work quite well with them .

The original poster was asking about the IWIN project, a nationwide
fed trunked system.

AFIK it's only been implemented in the pacific northwest into northern
California.

Thanks Walter. I wondered why he added "wireless". I was talking about the DOJ interoperability talk groups used by area agencies.

16804. Goodyear 800MHz Standard Repeaters, July 4

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-07-11 20:20:54 UTC
From: kb7aqd
Topic: 16804 Message: 16804

July 4 Goodyear PD Update!
Posted by: "kb7aqd" kb7aqd@... kb7aqd
Sat Jul 10, 2010 1:51 pm (PDT)

855.4875 PL 103.5

Alternate PD frequency for the July 4 celebration.

It's listed as "Channel 7" in the SWFD, but the police and dispatcher both called it "Channel Five" instead.

Have not heard that frequency used since July 4, but when they activated it, it was the strongest 800 MHz standard repeater I can hear indoors with my Yaesu VR500D scanner. Goodyear PD normal 800 MHz channels are weak, and Tolleson is at the noise level. Paradise Valley PD is blocked off by Shaw Butte from my apartment at Cactus and I-17.

I use the Radio Shack 800 MHz scanner antenna that shows a distinct improvement over my MALDOL ham antennas. Does any company make a small beam for 800 MHz?

Try out these frequencies! Workers at stores, zoos and other public attractions are happy to show off their new radios if you just ask to "see the radio, as I want to buy one for my company". Go to Google, then type in the radio type -- and the manufacturers show the factory preprogrammed frequencies on their websites. Plug these into your scanner, and listen.

The BPR40 can transmit on the MURS 154.570 and 154.600 MHz unlicensed two-watt frequencies, too.

Dress like a construction worker with a bright T-shirt, carry a lunch pail and storage clipboard, and work boots...or try a tan polo shirt with matching pants as if you work nearby. Never had a problem in years with anyone questioning my scanner.

Like Halloween or an Asian manga or anime "cosplay" convention, dress the part as mall staff or maintenance crewmember, and you will be surprised how many people ignore your scanner, or just figure you need it for work.

Let us know what you are logging on those frequencies above!

16808. Mike Lanning Services

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-07-14 22:25:17 UTC
From: Bill Halpin
Topic: 16808 Message: 16808

The service yesterday for Mike Lanning was really nice. The family was truly grateful for the comments made about Mike on all the websites and yahoo groups. Still no information on what caused Mike to leave us so soon. He had no evidence of any trauma nor was he being treated for any illness. They believe he passed away while taking a nap on the couch July 5th. It sounded like I was the last one to talk to him. Of course our conversation was about a past AZ Wild land fire (BIG BUG).

If you see any website or yahoo group I forgot to send this notice to please forward it for me. Thanks!

I miss you Mike

I would expect them to start using the 200 and 300 series for the new precincts, but you never know . and they would have to do change a lot of radios to do that .. because for example, A2/B2/C2 are already in use.

The Southwest Frequency Directory 10th Edition (www.ArizonaScanner.com) book has listed the talkgroups since before those precincts existed. They are as follows:

A2 200A TG: 2811
A3 300A TG: 2810
B2 200B TG: 2808
B3 300B TG: 2807
C2 TAC-2 TG: 2966
C3 TAC-3 TG: 2965

16827. scanner feed

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-08-31 23:18:06 UTC
From: Ranger
Topic: 16702 Message: 16827

New feed will be out Wed, will cover Mesa Fire, Gilbert Fire, Rural Metro and Scottsdale fire.If it get quiet at night I will turn on Mesa PD. I am using a pro-197 scanner with a discone antenna and a 800 meg antenna. During severe weather the scanner is programed to send out weather alerts and then go back to normal radio traffic. I will be using scannercast to feed the stream to Radio reference room. Here is the link to the scanner feed starting tomorrow:
http://www.radioreference.com/apps/audio/?feedId=3746

16829. RE: [ArizonaScanner.com] Re: scanner feed

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-09-02 01:13:39 UTC
From: Dan Danz
Topic: 16702 Message: 16829

And if you do Mesa/Gilbert Fire, you're going to get Apache Junction and Queen Creek Fire as well. Rural Metro will get you some west valley stations, too, like the county area around Glendale/Litchfield Park (but not LPK itself, since they just moved to Goodyear Fire dispatched by Phoenix Regional), and the Pinal County RMFD stations around Johnson Ranch.

That might not be a bad thing . just setting your expectations. But foresight is 100% right . Scottsdale is dispatched by Phoenix Regional Fire Dispatch (6xx apparatus and stations). If you try to turn them on, you'll have to turn on Phoenix Regional Fire (either the VHF channels or the 800-MHz Phoenix B simulcast to get Scottsdale, and you'll get everything else with it because they're all dispatched on a common alarm channel). Again, might not be a bad thing, depending on what you're trying to do. About the only thing you won't get then is Buckeye/Tonopah/Wittman/CircleCity/Morristown/Aguila/Wickenberg Fire Departments.

If you're doing fire, will you also want to do medical? As in SW Ambulance and PMT . separate channels for them, in some cases.

From: Ed (K9EDK)
Topic: 16702 Message: 16832

The two big dispatch centers are Phoenix and Mesa. Rural Metro provides services to many county areas in and around the Valley and have their own dispatch center.

Mesa dispatches for Mesa, Gilbert, Apache Junction and Queen Creek (Dispatch on 154.34 MHz VHF and the Topaz 800 MHz radio system)

Phoenix dispatches for Phoenix, Tempe, Chandler, Guadalupe, Sun Lakes, Scottsdale, Paradise Valley, Laveen, Glendale, Peoria, Sun City, Sun City West, Surprise, Avondale, Goodyear (including the town of Litchfield Park proper), Tolleson, Buckeye, Buckeye Valley (which includes many of the small communities in the far West Valley and down as far south as Gila Bend. Buckeye Valley rescue provides transport services to Tonopah and Harquahala Fire Departments) and the Daisy Mountain Fire Dept. which provides services to New River, Anthem and Desert Hills. (Dispatch on 154.19 MHz and the PRWC 800 MHz radio system)

Rural Metro provides services in the far Southeast Valley surrounding Queen Creek and San Tan Valley, the East Valley and East Mesa, Carefree, Cave Creek and West County areas around Litchfield Park. (Dispatch on 154.37 MHz)

I've probably left someone out, so I'll apologize now.

Hope this helps.

Ed

Ok so update , by the way thanks for everyones input I have the topaz entered but I only have the tg's for Mesa, and Gilbert, and Queen Creek. I add all the Rural Metro frequencies so what ever comes over the radio from where ever you will here. As far as Phoenix fire i have them programed in my scanner but will not have them on unless a large fire is going. I also have Mesa PD in my scanner but will only turn them on at nites if it is quiet out or by request. I am useing a pro-197 scanner and picks up very well, If you have something that you will enjoy listening to let me know . I have to follow up with scannercast because I have noticed the feed stops every so often. Thanks Tom

An interesting "complimentary" feed would be 1 that included all the Medevac channels (Air Evac, Native Air, Lifenet, etc) and the PFD digital K-deck channels except for main dispatch simulcast. Main dispatch is pretty busy and can get that from 2 or 3 other feeds that are available. Not saying it's a must but it would be an interesting feed.

From: az.cheetah
Topic: 16838 Message: 16838

Does anyone know what frequency Air Evac uses that you've actually heard them on? I've got several different ones, but I never hear anything.

Thanks

Air Evac for sure uses 155.325. They have seperate mountain range frequencies but it all leads back to 155.325 I do believe. Native Air uses a LTR system which radioreference has the frequencies for. I'm not sure about Lifenet and some of the others.

Air Evac usually talks at least once every hour, so if your not hearing them, then you likely don't pick them up.

I can,t speak for other scanners etc;for whatever reason every scanner i,ve tried to monitor native air on the lLTR system,had trouble trying to track the system and only got partial transmissions,with alot of trunking noise and shared carriers.Lifenet presumebly of the payson area;I still have,nt figured them out;when you enter their frequencies,you very occasionaly will get tidbits,butt mostly alot of interference,and garbage from shared users,not related to lifenet.so i don,t know.If anyone else out there knows the secret to monitoring those 2 companies;i,m open to suggestions.

I got the current scanner frequency book yesterday and entered the Lifenet and AirEvac frequencies and have already picked up brief chattering on both. I *think* I heard a dispatch scramble for AirEvac, but it was kind of muffled and distorted. I used to be able to hear them really well so it's somewhat distressing that I can no longer hear them and it's the same scanner. With LifeNet and Native Air, it's like Kenneth Howard said. A lot of distortion and only bits and pieces of transmission. I wonder if hitting it with the 'priority' button would make a difference. I might be wrong about the purpose of the button, but doesn't it make the scanner go directly to a priority channel if something is being said on it? I don't know. I've owned scanners since 1989 and there are some things I still don't know or understand. Like the talk group stuff. hahaha.

Activating priority on a channel just causes the scanner to stop what it's doing every two seconds or so to check that channel. It can be annoying when you're listening to other thugs because it will be briefly interrupted every two seconds while the scanner checks the priority channel. It won't improve the reception of it's already bad.

No current scanner has dual receivers, which is what would be required to have a priority channel interrupt a channel being received.

Rather, priority comes into play when the receiver is actively scanning and must select between multiple channels/talkgroups/systems. The details of exactly how it works varies with the individual scanner.

Air Evac for sure uses 155.325. They have seperate mountain range frequencies
but it all leads back to 155.325 I do believe. Native Air uses a LTR system
which radioreference has the frequencies for. I'm not sure about Lifenet and
some of the others.

Air Evac usually talks at least once every hour, so if your not hearing them,
then you likely don't pick them up.

Thanks, Dan. Of course it couldn't be as simple as automatically going to a priority channel when they start talking

No current scanner has dual receivers, which is what would be required to have a priority channel interrupt a channel being received.

Rather, priority comes into play when the receiver is actively scanning and must select between multiple channels/talkgroups/systems. The details of exactly how it works varies with the individual scanner.

Subject: Re: [ArizonaScanner.com] Re: scanner feed/Medevac freqs

I got the current scanner frequency book yesterday and entered the Lifenet and AirEvac frequencies and have already picked up brief chattering on both. I *think* I heard a dispatch scramble for AirEvac, but it was kind of muffled and distorted. I used to be able to hear them really well so it's somewhat distressing that I can no longer hear them and it's the same scanner. With LifeNet and Native Air, it's like Kenneth Howard said. A lot of distortion and only bits and pieces of transmission. I wonder if hitting it with the 'priority' button would make a difference. I might be wrong about the purpose of the button, but doesn't it make the scanner go directly to a priority channel

if something is being said on it? I don't know. I've owned scanners since 1989 and there are some things I still don't know or understand. Like the talk group stuff. hahaha.

Scanners are getting more and more complicated. You used to not beable to have the S.A.M.E. activate when a scanner is in scan well guest what you can now. The new digital scanners anymore you need a program to program the scanner .

Hate to burst your bubble BUT a receiver DOES NOT need dual receivers to perform a priority scan. Most all receivers just do a momentary check on the priority channel while stopped on another non-priority channel. You hear a momentary click or drop out of audio when it checks the priority channel. Motorola has been doing it for years with single receiver radios as well as most other brands.

If you can put up with the annoying frequent dropouts while it checks. Priority scanning on a real trunking radio is actually done by the zone controller which knows about active TGs and can tell the radio to switch to another voice frequency when there is traffic on the priority talkgroup.

16852. 138/148 MHz Mil Subbands?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-09-13 19:33:15 UTC
From: kb7aqd
Topic: 16852 Message: 16852

I have searched the military subbands, and have found the following:

148.150 FM mode CAP "Red Rock" series callsigns.
148.875 AM mode Air National Guard aero comms.
149.000 FM repeater, but opens with only noise, not voice nor digital.

Have you heard any other active frequencies in this range near the two-meter ham band?

16853. Concern re:scanners and reception...

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-09-13 19:29:58 UTC
From: az.cheetah
Topic: 16853 Message: 16853

I am going to start thinking more seriously about getting a digital scanner here in the next coming weeks, but I have a concern or two. I work in a 3 story building on the 3rd floor in North-ish Scottsdale (near Lp 101 & Via De Ventura) and that is where I do most of my listening. Currently, I have a Radio Shack Pro-95 and I'm able to pick up quite a bit, including Chandler PD which is a pretty good distance from my office. I recently discovered that a big reason I wasn't able to pick up Phoenix Fire or RMFD was because my squelch setting was off. Unfortunately, in order to be able to pick up those 2 plus PMT and SW Ambulance in the west valley, I have to deal with static and 'crunchy' noises after the radio talk button has been released, but I'm glad I was able to figure out why I'd been hearing Phoenix Fire this morning but not this afternoon.

But here is the reason for this post. I don't sit near a window (probably 50ft away) and there is no way I can install an external antenna on my building for better reception. I'm concerned about buying a digital scanner only to have it not pick up anything. Am I incorrect in believing that it helps to be near a window or have an external antenna? I imagine I'd be able to hear Scottsdale PD fairly easily since I'm right there, but I could be wrong about that. hehe. I also find that I can move the scanner around a bit and it improves reception and I don't get that 'crunchy' interference as much. Currently I have it sitting on my desk and tilted back a small bit.

Also, how difficult is a digital scanner to program? I can program an analog one with my eyes closed practically, but not a digital. There's all these talk groups and stuff listed in my frequency book.

I'd appreciate any help you can give me.

Any PL on the CAP Channels ?? Each Rptr has it's own PL Tone

CAP also has 148.1250, but it depends on where in AZ
CG Aux 150.7000 is a Rptr at Mt Ord

I have noticed that when an officer makes a traffic stop
he reports to dispatch that the driver is aware. Does
anyone know what this means? Thanks.

Gary, WB7CAG

Next time you hear that, try to write down the entire transmission verbatim.
Sounds like you may be misunderstanding a word.

He is actually hearing the officer reporting that the 'driver is aware' after the officer has requested a tow for a privately owned vehicle. For serious accidents where the driver is unconscious, you will hear the officer report that the 'driver is not aware.'

The radios 106/197 are not that easy to program for some people and the manuals are not that easy either.

No kidding! The manual may as well have been written in gibberish. I can program standard trunking and analog frequencies with no problem. I just don't get how to program the digital stuff with the talkgroups and all that.

Please, is there anyone out there who would be willing to help me out? I have the ARC500 software on my computer, but I don't know about trunk groups and when I try to program a talkgroup it says I need to select a trunk group or something like that. I've asked at RR and here and all I get is people referring me to the so-called easier-to-understand manual but I need someone to actually show me how it's done. Please?

Trying to program trunking systems by hand is not for the faint of
heart, nor for the casual listener.
The only way I got DPS's Pro96's done, was to buy the programming
software, take a programming file that a kins soul had posted on
theis group's website, modify the conventional stuff to fit the users
desires, and program them.

Be forewarned that Yahoo! has announced that they will be changing the website interface to one that looks a lot like FaceBook.

They have not changed this group yet, but those that read/post from the website will see the 'update' soon.

Please refrain from posting to the group regarding these changes.

To make your opinions known to Yahoo!, please go to their blog at
<http://suggestions.yahoo.com/?prop=groups>

Brenda,
In case you didn't see or missed my other email...I sent you a reply with my phone number a few days ago. And have not read anything about wanting to meet up and resolve your issues with the scanner. I live on the west side of phx. I can program your scanner with my file (I use WIN500) takes 10 seconds !!!!!! I can use my laptop on the dining room table. Then you can go home and download the radio using YOUR software. Then you can make changes as you see fit. I have a bunch of files I have personally made for AZ. If you have any questions on "how to do ..." that can be addressed at that time too... Just give me a call. Thanks.

16874. RE: [ArizonaScanner.com] Medical helicopter crash on Youtube

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-09-18 19:32:20 UTC
From: Dan Rollman
Topic: 16867 Message: 16874

I listened to the RR archives of the incident. You can hear the fire dispatch and units adding on to the call, and the TPD traffic, but you cannot hear the TFD fireground traffic because the Tucson RR scanner does not scan TFD fireground.

16875. Florence Fire

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-09-19 16:42:12 UTC
From: b_mclean
Topic: 16875 Message: 16875

Does any one know the frequencies that Florence Fire is using? RadioReference and the Southwest Directory have no listings for Florence Fire.

Thanks,
Bill

Subject: RE: [ArizonaScanner.com] Medical helicopter crash on Youtube

I listened to the RR archives of the incident. You can hear the fire
dispatch and units adding on to the call, and the TPD traffic, but you
cannot hear the TFD fireground traffic because the Tucson RR scanner does
not scan TFD fireground.

Halo 151 is an Air Evac helicopter that is co-manned with
Firefighter/paramedics from the West Valley and can be dispatched directly
by Phoenix RDC.

Trauma Flight is another, however, I recently heard that they have gone out
of business.

16886. Northern Utah (Arizona Strip) Freq questions & info

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-09-24 03:53:18 UTC
From: Tim
Topic: 16878 Message: 16886

I'm living in SW Utah, close to the 'Arizona Strip' & monitoring a lot of northern Mohave & Coconino County comms. I'd love to trade notes with anyone else familiar with or curious about Arizona Strip area comms.

Can someone explain to me the use of 453.175 (136.5Hz) repeater by Arizona DPS? Sometimes I hear it simulcasting the district traffic I hear on 460.475 (151.4Hz), other times I don't, and I have heard DPS SWAT on it (simplex & repeater) in the past as well.

Also, is there a CTCSS output on the 463.100 AIRS repeater? I've caught some DPS Ranger helos on it (repeater & simplex) but wasn't in a position to grab a CTCSS at the time & don't hear it frequently used up my way.

I hear frequent repeater & sometimes simplex traffic on 151.445 (88.5) & 151.460 (88.5). Are these Arizona State Lands Dept rangers?

Mohave SO has an Arizona Strip area repeater on 155.655 (173.8Hz) called channel 8. It's used rarely, & when I do hear it in use, it's often an elderly-sounding person (a volunteer, I assume) using an 8-Paul callsign & reporting that location #### checks all-secure & he's heading to check on location #### next. Anyone know what's going on? The normal Mohave SO repeater for the Arizona Strip is 155.910 (110.9) for the Beaver Dam area, but they also have a repeater on 158.730 (110.9Hz) for when they're on their isolated stretch of the strip along Highway 389 between Colorado City & Fredonia. Usually that repeater simulcasts 155.910 traffic. I don't know what that repeater is actually known by but some hobbyist type sources call it their "Fredonia Tac" repeater.

Mohave SO might be getting busier on this stretch of land now that a new sub-station shared with DPS, DOT & the District Attorney's Office has opened-up just a few miles S of Colorado City. I'll bet the FLDS peeps in Colorado City are real happy about that... I travel 89/389 back & forth between Hurricane & Kanab frequently & usually just see an Arizona DPS unit patrolling Hwy 389. A Mohave County SO unit from the Beaver Dam office would have to travel about 45 miles, most of it thru Utah, just to get to that other section of Mohave County.

Trying to follow the soap-opera via Google, it's confusing as to whether or not Colorado City does have their own PD or Town Marshall, or if they're actually sharing LE with the adjoining FLDS community of Hildale Utah. I assume they're sharing, though that'd be somewhat unique as it would be two states sharing one agency for police services (they do share fire/EMS services). I do know that the Hildale Town Marshal uses a repeater on 155.100 (103.5) & are 10X-callsigned units.

Finally, Coconino SO has a "Fredonia Tac" repeater on 155.730 in the Fredonia area. Actually, the repeater might be across the border in Utah. Does anyone know for sure what the CTCSS output (if any) is on this repeater? I've heard Fredonia FD dispatched out on it but didn't catch a CTCSS.

Fredonia Town Marshall is normally dispatched by Kane County (Utah) central dispatch on 155.700(203.5Hz) from a repeater site on Moccasin Ridge, behind Pipe Spring, as-is the BIA

Police at the Kaibab-Paiute Indian Reservation ("Delta #" units on 155.700).

Even Arizona DPS checks-in frequently with central dispatch on 155.70 when in the Fredonia area.

Tim
Arizona Strip area

Tim wrote "Also, is there a CTCSS output on the 463.100 AIRS repeater? I've caught some DPS Ranger helos on it (repeater & simplex) but wasn't in a position to grab a CTCSS at the time & don't hear it frequently used up my way."

463.100 is part of Arizona's EMSCOM repeater system, not actually part of AIRS (The AIRS suite includes 154.280,155.475, 463.375, and 866.0125, as well as the national V-TAC, U-TAC and 800 interoperability channels), 463.100 is called Med 5 and 136.5 is the CTCSS. It is used a a calling channel to set up ambulance-to-hospital patches and a flight follow channel for DPS airships. The freqs are nationally assigned for hosp-ambu communications, so UT may have other uses for it as well.

Tim also wrote "I hear frequent repeater & sometimes simplex traffic on 151.445 (88.5) & 151.460 (88.5). Are these Arizona State Lands Dept rangers?"

These are actually AZ Game and Fish Channels.

We're 'borrowing' MED 14 to fill a coverage hole we have right now on
district 1.
When we narrowband, it will change to one of DPS's frequencies.

Curious as to why you're asking about the tones.
Unless your programming a 'real' radio to transmit on those
frequencies, it's not going to make much difference.
There are no other users on those frequencies to filter out.

Maybe he has one of the newer scanners where he could not only program the freq. but also the tone to keep interference down. If I now the tone I always program it in. My truck seems to give off a few birdies right on the channels I like to listen to. So knowing the tone and having it programmed in really helps.

I think paranoia is getting the best of you, Walt. I asked about a couple output tones that I hadn't had a chance to grab, not repeater input tones.

But to humor you anyways:

1. I mentioned being in the Arizona Strip area. I have good ears. There ARE other users on some of the freqs for me, in several states that I can hear.
2. Potential EMI/RFI issues.
3. Because I'm curious.
4. To fill in data gaps in my database.
5. To generate a useful & informative thread about Arizona Strip area monitoring in a discussing group concerning monitoring Arizona radio communications.

That doesn't sound right.
Are you saying Ord and Humbolt transmit at the same time, same traffic,
on the same freq just with different PL tones?

If that's the case, when your receiver opens up by way
of the Ord tone, your receiver would also be hearing
the Humbolt signal.

Once the receiver is "opened" via the CTCSS tone,
it's opened to any and all traffic on that freq.

I think there are lots of people out there who don't understand that many large areas (such as National Forests) with numerous linked or standalone repeaters using the same frequency pair use the same output CTCSS/DCS/NAC but a different INPUT CTCSS/DCS/NAC.

Especially with the USFS, for which there are official documents out there on the web that list the repeater access data, they see Smith Mtn uses 103.5Hz, Jones Peak uses 156.7Hz, Maynard Visitor's Center uses 233.6,Hz, etc. & they assume those are all different repeater input/output tones, when the reality is they're input tones only & the geographically separated repeaters on the same/freq paid use a common output tone or code..

I see this a lot with some of the Radioreference data

Hello Everyone,

Quick questions. What is the fastest computer I can program saber with? I know. I need a rib and cable. Am I missing anything else but the brains to do it. I have the software thanks to a few in the group here. Plus I have a convert a com (MVA) problem is I'm missing the power cable. So anyone know where I could get a replacement??? Or if its a plug I could pick up at any electronics stom,re what its called?

Thanks, Chris

Without jumping through a bunch of hoops, the Saber software shouldn't
be run on anything higher than a 486 processor.

It can be done with Pentiums, but you need to do a bunch of special
configuration stuff, run MoSlo to slow the processor down, and you
HAVE to boot to DOS, no DOS from within Windoze.

Yes.

Due to a failure of the backup power, DPS's Phoenix dispatch had to move to our Incident Command Van. There are limited capabilities and only one operating position.
They were able to go back to normal when the power was restored.

I have listed to a lot of digital radio out there, but Mesa has the worst radio system. At times the communication is choppy sometimes you get a word or to in a sentence. I am not far from the police station so the comms should not be that bad. I am using a discone antenna and a 800 meg antenna. Anyone have any ideals? In the software I did change the auto to manual in the tags with the win500.

Try reducing the gain of the received signal by turning on the attenuation. or might want to try listening with it off too to see which way works best.

I would leave your P25 setting at auto. I agree Mesa is not the nicest system for scanners to monitor. There isn't much you can do besides setting the 106 up as a base and using a directional antenna, or using the 800mhz antenna and moving the scanner around till you find a sweet spot that it will receive in.

Stick to your guns

Editor:

The very
fact that Americans have had the right to keep and bear arms since our
inception and (that right) is currently being called into question is a
little disturbing. It says a lot about our current, so-called "leaders"
and the rise of liberalism over the last few decades.
There is no
doubt that violent criminals have exempted themselves from this inherent
freedom, but law-abiding, tax-paying and responsible Americans who
understand the great responsibility that comes with gun ownership should
never be questioned about their right to own self-protection or
recreational guns.

I don't think the authors of our sacred
Constitution ever imagined that at some point in the future, our laws if
not passed through Congress would be redirected and decided by biased
or agenda-oriented freedom haters with gavels. This business of liberal
judges twisting words around in order to call something constitutional
or unconstitutional to meet their needs is unconscionable.

It has
never been more obvious until now that the rise of liberalism equals
the decline in personal freedoms on every level because there is no
doubt that before Barack Hussein Obama is thrown out in 2012, he and his
partners in crime will attempt to introduce legislation that will
remove your guns or make them useless through ammunition regulations.

If
anyone reading this enjoys hunting, recreational shooting, or just
enjoys the peace of mind that comes with personal protection gun
ownership, you may want to raise an eyebrow at who is currently in power
and who holds majorities in the House and Senate.

Nov. 2 is coming fact. Do a little homework and vote for pro-gun and pro-freedom
candidates.

16908. Mesa and the 800 radio system

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-10-12 02:43:50 UTC
From: Ranger
Topic: 16908 Message: 16908

I spoke to a Mesa PD Officer today , won't mention his name but we were talking about the radio system and the safety issues that is a big concern. I was told that they depend more on thier cell phones then the radio system. The Officer said their radio's do not work very well indoors of a building and most of the time they can tell when they have to go to cell phones because when the radios loose coverage the radios sends a beep to the officer. They depend very highly on the helo to transmitt to the dispatcher during high alert incidents. So If your radio is breaking up during a conversation it may not be you. Was also told at times the radio will go into full digital which also creates a big concern for safety. The problem now is they are stuck with the system , the only thing that can help is to put up more relay towers.Don't hold your breath not going to happen anytime soon. There is even talk about 900 system testing to see it this will help. I hate to say if the 800 is not working the 900 is not going to work. The 800 works great if you are in a flat state like jersey but in the mtns no way hozie. Fire is getting just as bad I heard 2 jobs get sent out today anf both times the radios broke up during the page. 1 incident the 2 engines called dispatch when the dispatch gave the update on location like they always do 2 of the engines came on radio and ask dispatch if they were added to the alarm because the alarm was in thier local and dispatch relpied back and said to the engines that they were toned out for the alarm. the engines came back and said that they never recieved the alarm. Some needs to wake up and find the sulution for this !

One of their problems is that they have a multipath signal problem, by adding more towers will just cause more of an issue.
The city got sold a "bill of goods" from Motorola. Digital systems are just plain "crap", I've been in radio communications
for over 30 years and still sell analog systems.
Notice you don't see HDTV's in moving vehicles, thats because the systems doesn't work while in motion. And cell phone
audio quality is just plain crap, the old analog systems where much better.

Since the MCSO system is a P16 system I am thinking that you would use mot800/900, that is the way the Uniden scanners are at least.

Well, the first thing you will need to do is buy a new scanner as Mesa is all P25 Digital.

With your current scanner you can listen to ham, air, some ems but PD and Fire are on the Topaz P25 Digital System.

Good luck!

I guess that would help, I did not look into the scanner myself, I do have my scanner back online for mesa now that my daughters pc is back and working. http://www.radioreference.com/apps/audio/?feedId=3746 here is my feed. I have mesa fire, gilbert fire, rural metro ,mesa pd , at nights if things are quiet I will have mcso and dea, I have tryed all the medicvacs but I am not picking anything up on them. Please send feed back on this feed. I had a hard time getting scannercast to keep running. I ended up haveing to take my laptop back to factory settings, upload scannercast for the 10th time and this time I uploaded both the alt and control channels for fire and pd using radio reference room and win500 software. I also have other links to scanner feeds in my ScannerBuffsOfAmerica yahoo group.

Incorrect, Mesa Fire is still patched to their VHF frequencies MFD Ch.1 154.34, MFD Ch.2 Tactical 154.235, MFD Ch.3 153.95. The patch will be in place for awhile until other fire agencies are programmed with Mesa system keys.

*** Tucson Ham Radio Picnic ***

I would like to thank everyone for coming out to the Tucson Ham Radio Fall Picnic last weekend at Christopher Columbus Park. Everyone had a great time and it's always nice to have an EYEBALL QSO with everyone.

We do this picnic every 6 months and looking forward to the next one.

If you would like to be on the Picnic Mailing List to receive information on upcoming picnics, you may sign up for it at the website.

The photos are online and available for your viewing pleasure.

OK, I put the frequency in a two way radio I have and I hear it fine but when I program it in my BCD396T without a pl I don't hear anything.

All the other DPS frequencies work fine.

Anybody have any thoughts?

From: Walter Howard
Topic: 16926 Message: 16926

You have been really helpful before, chasing down interference on
public safety frequencies.

I come to you, asking for assistance again.

G&F is experiencing new interference in the central/west part of the
state on 159.375.
We can hear it on Smith Peak in Aguila, Oatman Mtn west of Gila Bend
and Cunningham Peak, just south of Quartsite.
It seems to have the clearest signal at Smith.
We do NOT hear it on Telegraph Pass outside Yuma.
It's intermittent, but seems to have either broadcast radio or analog
TV audio along with a buzz.

If anyone is able to hear the audio clear enough to determine what
station is involved, the State of Arizona will be in your debt.

Please report any information to me at:

whoward@...

Thanks guys/gals

WalterH

From: Mark me
Topic: 16927 Message: 16929

ok Helping try this trick...

Hello, if you upgrade the O/S from win 98 to Xp most of the drivers should work from the master CD rom O/S disk as there is a lot of drivers on the master Xp CD, if not, you can update the drivers
if you know what your doing...

first make sure your connected to the internet
update windows and get the latest service packs www.microsoftwindows.com\update

I normally leave my pc on over night so it gets them while i am sleeping.. :o)
anyhow

get into device mananger,
the short cut way: right mouse button (butt) on my computer
click on prop then select device mananger from the tab

the long ass way: C:\admin\Control Panel\All Control Panel Items\System

if you see anything with a red X or Yellow ! next to the device This indicates a driver/com issue
first off see if there a conflect, if not, in Xp, right mouse on the X or ! (issue) and select up date driver tab
then select auto serach or up date from web

follow the on screen instructions from this point and it should up date the driver
you can only update one driver at a time.

if not, you may have to go to the manufuchers web site of the device in question
that is connected to your pc and having an issue, then locate the make/model and
the right driver for the right O/S download the driver to my documents

I normall make another folder called Storage and then another folder called Drivers and yet another folder, and stick the drives in there so each folder has a name for each device EG

C:\Users\Admin\My Documents\Storage\Drivers\ "X"

where "X" would be the drvide driver for EG a printer or sound card or GFX or mouse or whatever...
C:\Users\Admin\My Documents\Storage\Drivers\Printer
C:\Users\Admin\My Documents\Storage\Drivers\Sound_Fx
C:\Users\Admin\My Documents\Storage\Drivers\Gfx
C:\Users\Admin\My Documents\Storage\Drivers\Mr_Mouse

you can call these folders anything you wish, but i like to make the relevent and what they are for
so putting each device driver into its own folder makes more sence for later use, well i

think so...

Now where did i put that darm drivers???

anyways...

then once the driver is downloaded to your folder, click on install or set up
follow the on screen guide...

Note: you may have to unplug the device connected to the pc before installing the device
so the drive can set it self up propley...
you also maybe asked to reboot the pc at some point or restart the pc
then see if the drvice is werking...

if you dont have Xp and stuck with Win 98 (SE, I hope); you may never get that device to
work
note i said May... not never...

hope this helps if not email me
K4eez At hotmail dot com

ps
request help...
i am just going to throw this out there...
you never know...

Anyone got an unused mother board that accepts 400mhz ram that has an Pci Express slot??
my desk top pc just took a dump on me... yup dead Mother board... gerrrr
M-board that i am looking for that accepts Amd or intel cpu as i have both
cpu/ram/gfx/hdd all ok... but dead M-Board.

Topic: 16930 Message: 16930

I have noticed that the digital system during the day is extremely choppy but at night is is very clear does anyone know why? For mesa fire took them off of digital completely and went back to the old system which is nice and clear. The Mesa pd is still very choppy during the day comms are a hit and miss. I have the top of the line scanner which is a pro-197 a discone antenna and a 800 meg antenna not sure what else to do about the choppiness if you have any ideals let me know.
I also added Fiesta Mall security for this time of the year beings we are going into the busy shopping season.I have DEA, FBI,Rural Metro, MCSO only at nights, and skywarn only during inclimate weather. I have also added my feed to the http://thescanningnation.socialparadox.com/.

It's that time of year, temperatures are going down and changed are happening in the atmosphere. It gets complicated with radio propagation calculations and what not. You're best bet is to move the antenna around till you find a spot it works for you both night and day. If your primarily interested in listening to Mesa you may want to try a directional antenna.

The techs in Phx were working on one of the systems the other day. I don't know which system it was on. I didn't pay much attention.

16936. This weekend

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-11-08 19:03:30 UTC
From: Alan
Topic: 16936 Message: 16936

I will be in Phoenix this weekend at Firebird raceway for motorcycle racing. I have downloaded the file from the group and seem to be happy with it. Of course, since I don't live there and know what the problems are, any traffic is all right.

If anyone is coming to the Santa Fe area, let me know I have RS PRO 106 files.

If you get to the east track, look for the 1972 Honda 450 #765 in the vintage class (just like me).

Alan Hill N5BGC
Santa Fe, NM

K1 is the only patched channel (patched to PFD Channel 1).

K6 through K11 are currently being utilized as TAC channels for non-hazard zone calls.

16955. CB antenna for scanner

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-12-10 17:23:06 UTC
From: jasonkoster
Topic: 16955 Message: 16955

I have a 10 inch, black, whip antenna with a BNC connector that is tuned to the CB band (26Mhz) and I no longer need it for my scanner. Just checking to see if someone in Phoenix would like to have it at no charge. I attempted to sell it but nobody responded so now it's available to anyone with an interest in it. I live near the airport in Phoenix and will offer it to the first response. I apologize if this post is not seen as appropriate, but if I give it to Goodwill, nobody will know what to do with it or what frequency it is tuned to. Just looking for someone who knows what to do with it. Thank you.

Make sure you don't have the site programmed as a P25 trunked system. It should be programmed as a Motorola system.

Mark,

I can back Jeff up here. I've seen some pretty nice digital scanners at a couple Pawn Shops here in Tucson in the past. Also, Ebay is crawling with them at decent prices.

From: trunkh8er
Topic: 16967 Message: 16967

I went to ZooLights this week. I entered the Phoenix Zoo freqs (151.745 and 151.925) into my Pro 106.

There was a lot of traffic, but it was all databursts. It has no trouble with digital trunked systems. What setting did I miss for digital non-trunked systems?

16969. Grecom PSR500 frequency coverage

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-12-12 21:58:48 UTC
From: John H. Guetherman
Topic: 16969 Message: 16969

I find it strange that my PSR500, in 'Public Safety Search' mode, includes 151.8200-151.9400 (business and MURS channels) and 462.5500-462.7250 (GMRS/FRS) but does not include AZ Game and Fish or State Land channels around 151.4000 +/-, or the EMSCOM band at 462.9500-463.1750. Is this a defect, or just an oversight or deliberate on GRECOM's part?

From: junk_mail.rm
Topic: 16973 Message: 16973

I am trying to set up my BCD396T for Phoenix K channels.
I set up the trunk system as Motorola-P25 and added Simulcast B frquencies (867.0875, 867.1125, 967.9375, and 867.9875 - these are listed as the control channels.)
I added talk groups, 1615-1606 (K6-K15)
I set I-call to 'on'

I am south of Phoenix in the City of Maricopa.

I am still not hearing anything on these. Am I missing something?

Thanks in advance.

Mass F-16 launch to fill skies

Posted 12/10/2010
by Staff Sgt. Robert Biermann and Jodi Jordan
56th Fighter Wing Public Affairs

12/10/2010 - LUKE AIR FORCE BASE, Ariz. -- The skies around Luke Air Force Base will be busier than normal Wednesday during Cactus Starfighter, a large force exercise for the 310th Fighter Squadron and 310th Aircraft Maintenance Unit. During Cactus Starfighter, the combined efforts of Luke units will launch more than 30 F-16s at one time.

The exercise will focus on mission planning and coordination in addition to aerial maneuvers. All student pilots in the F-16 Basic Course must participate in similar exercises at the end of their training, but this Cactus Starfighter is unique in the number of aircraft launching simultaneously and the level of coordination required, said Capt. Christopher Hubbard, 310th FS instructor pilot.

The plan is for 36 F-16s to launch from Luke's runway. Of these, 32 will be "good guys" and four will be "bad guys," or aggressors, Captain Hubbard said.

Additionally, a KC-135 tanker aircraft from Altus Air Force Base, Okla., will launch from Luke and provide aerial refueling. Also joining in the exercise are F-15 aggressors from Nellis Air Force Base, Nev., and Marine Corps F-5 aggressors from Marine Corps Air Station Yuma. Providing command and control as well as intelligence gathering are three aircraft from other bases: a joint surveillance target attack radar system aircraft from Warner Robins Air Force Base, Ga.; an airborne warning and control system aircraft from Tinker Air Force Base, Okla.; and an RC-135 rivet joint aircraft from Offutt Air Force Base, Neb.

"It's always a goal to have as many aircraft flying as possible, because historically, in real conflicts, you would have this size of a package," Captain Hubbard said. A package is the combination of air assets a commander sends to battle.

"Unfortunately, we aren't usually able to put this many aircraft in the air," he said. "The size of the exercise force is determined by a host of factors, including maintenance schedules and air space limitations."

A large force exercise like Cactus Starfighter gives the B Course students realistic training in the way they would have to fight in a real-world

operation.

The impetus for Cactus Starfighter came when Lieutenant Col. Timothy Trimmell, 756th Aircraft Maintenance Squadron commander, issued a challenge to the maintainers of the AMUs here.

"In September, Colonel Trimmell challenged the AMUs to 'launch the fleet,' i.e., see which AMU could be the first to launch all their aircraft at once," said Capt. Joshua Downing, 310th AMU officer-in-charge. "We're meeting that challenge."

Regularly scheduled maintenance would normally preclude such a large launch of aircraft, Captain Downing said. In a normal week, at least three or four of the jets assigned to the 310th AMU aren't flying because of maintenance schedules. Also, the sheer numbers of maintaners needed to launch 20-plus aircraft required special consideration, he said.

The coordination process to perform has included the 308th and 310th FSs, 56th Operations Support Squadron air traffic controllers, 56th Maintenance Operations Squadron end-of-runway crews, 56th Fighter Wing plans and scheduling, and other AMUs.

Also helping to put the exercise together are the Airmen of the 56th Operations Group Intelligence Flight. The flight is responsible for providing intelligence briefings to the fliers on all aspects of the different threats and weapons systems they will be simulating combat against during Cactus Starfighter. "Basically, we come up with all the plans to ensure the pilots can defeat the threat, do their job and come back home safely," said 1st Lt. Chad Haring, 56th OG Intelligence Flight systems chief.

More aircraft means more pilots to brief.

"Instead of briefing two or four people across a table, we will be briefing a room full," he said. "Our mission is the same, but the volume and quantity changes. We have to be very precise in making sure each individual gets the information."

The event is going to include many assets, according to Captain Downing.

"This exercise will use all the resources we have," he said. "The nearly 260 Airmen assigned to the AMU will assist with the launch and recovery of the jets."

At least four jets will take off at a time, with a five to 10-minute gap until the next series takes off. Once all jets are in flight, they'll be airborne for nearly an hour and a half.

"The 'launch the fleet' large force exercise will be an epic celebration of TopHats history to have all TopHats airborne at once," said Lt. Col. Sean Routier, 310th FS director of operations. "Since it formally joined Luke Dec. 15, 1969, it's been training pilots and weapon systems officers."

Bummer. I live on the other side of the buttes from the zoo and I thought it'd
be fun to hear what was going on when I wasn't there

Thanks

I don't know of any scanner that can decode that modulation.

Nope, I'm in the right search mode. Public safety. But it doesn't cover 1509950-151.4900 or EMSCOMM. It does cover MURS/Business 151.8200-151.9400 and GMRS 462.5500-462.7250 and 467.5500-467.7125 (it doesn't include 467.7250).

It doesn't cover 150.9550 but it does cover 151.4 and EMSCOM

33.4-46.5=0
151-170
453-467
767-797
851-869

16983. Home Patrol-1

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-12-14 16:11:15 UTC
From: Tom
Topic: 16983 Message: 16983

Hello All!

Well, I just bought my son a "Uniden Home Patrol-1" yesterday. I just wanted to share some of my first impressions of the unit. At the going price, I feel that everything you need should be in the box. I have purchased many $500.00 plus radios only to discover that I have to buy additional things like automobile power plugs, software, etc... I was pleasantly surprised that this is not the case with this unit.

First, I was going to purchase it on line, but then decided to go to our local HRO store here in Phoenix. I feel that local ham radio stores are a bit of a rarity, and a great convenience. Since I'm a bit of an old retired F**t, I still enjoy talking to the guy behind the counter. Internet transactions just don't have the same feel. I got a decent price and since I paid cash, I got a bit of a discount. These resources will go away if they are not supported. I feel they serve an important function in our hobby.

We brought the scanner home and put the batteries in. They have to charge for over 12 hours, but the radio works nicely from the supplied "wall Wart". We powered it up and simply entered our Zip code, and that was it! This is a huge point. My son is not a Tech type. This is the first scanner he has purchased and operated with no help from me.

The touch display is clear and intuitive. He never opened the user guide The radio just started working! Now I know there will always be us "Nuts and Bolts" guys that like to know all the inner workings as well as all the features of our stuff. Well with the home pro you can do that, but you don't HAVE to. The thing even comes with a GPS input port so it will always "know" where it is, and select the correct frequency database.

Steve jobs once said when introducing the first "Mac" "You shouldn't have to know how the phone company works in order to make a phone call". This is true when comparing the Home Patrol to other scanners manufactured up to today.

I've owned a lot of scanners. My first one was the Radio Shack "Pocket Scanner" from sometime in the early `70s, up to today's complex programmable units. The Home Patrol is truly a scanner for someone that just wants to listen to the activity available on these entertaining devices. Just turn it on, and enter your Zip.

I have my suspicions about the Home Pro in the area of battery life, ruggedness, real Sensitivity, etc. and since this is really an SDR (Software Defined Radio) I can't wait to open it up. However that has to wait since my son has promised to "break all the fingers on both my hands" if I touch it with a screwdriver, now, this fair, since I used the same expression on him after I ran over some of my tools with the lawn mower many years ago. But that doesn't preclude my operating it while he's at work. I want to see how long all that hardware will run on those 4 "AA" batteries.

For more info, try this link http://www.homepatrol.com/?http://www.homepatrol.com/=

Cheers all!

16984. Re: [ArizonaScanner.com] Home Patrol-1

Yahoo group: ArizonaScanner (2007 — 2012)

Topic: 16983 Message: 16984

Great Review and information about this new scanner. I'm just about ready to buy this unit but I do have a few questions about it before I put the money in the vendors pocket.

#1 Will it monitor all the new digital systems in the Phoenix area?

#2 Can I add a missing frequency to the unit while it is scanning that particular area.

#3 Is the antenna connection the standard BNC connector?

#4 Can I scan more then 1 Zip Code at the same time?

Your editorial about HRO in Phoenix was informative. But I do have a few questions about it also

#1 What is the cash discount since they advertise the radio on their website for $509.00 with free shipping?

#2 Do they consider a check as cash (especially carrying that kind of cash around town) ?

Thanks

Bill

I have a HomePatrol as well and can answer your questions.

The digital system in Phoenix are hardly new anymore, but it will monitor all non-encrypted channels.

If something is missing you can add it to Radio Reference, which is the source of the data. They pull from that database once per week so you can update the data once per week.

The antenna is an SMA connector. SMA connectors don't put as much stress on the structure when being removed or put on as BNC connectors.

You can specify your location several ways: GPS, zip code, town, or let the radio figure it out by what systems it can hear. All of the systems in Radio Reference have been geotagged or are in the process of being geotagged. What that means in that they are getting a latitude, longitude and range (the range being their limits of their jurisdiction not the effective range of the radios). If you use a GPS for your location, the radio sets its range to 0. This means that any radio system's range overlaps your GPS position it will be programmed. If you put in a zip code the radio sets its range to 10 miles. That means a 10-mile circle is drawn around the center of the zip code you put in. If any radio system's range circles also overlap that then they will be programmed. It works the same way if you put in a city name but in that scenario the radio sets the range to 20 miles. If you use the systems the radio can hear the range will be set to 30 miles. You can also change these ranges yourself.

I consider myself an advanced user but I really like the HomePatrol. It's not just for people who are unfamiliar with trunked systems or scanning in general.

For more information see http://www.homepatrol.com.

Thank You Jon for the quick response. You certainly answered my questions.

So I called HRO in Phoenix and reserved one for tomorrow pick up since I'll be traveling from Prescott to Buckeye.

Thanks Once Again

Bill

Thanks for the info. I've just gotten back into scanning after several decades and still a bit unclear which talkgroups come off of which systems and didn't want to spend a lot of time programming something in that wouldn't work.

Dave

From: Tom
Topic: 16983 Message: 16988

Bill,

First, Thanks Jon, for the additional information you kindly replied with...
I'll address what Jon didn't...
Bill, I'm not sure about the check vs cash thing...
But the scanner was $546.45 at HRO, Which included the tax. I saved about $5.00 because the over-night shipping from Grove was going to be $50.00 plus insurance. and Son was anxious to get the scanner because I promised it to him for his birthday in October.

Note on Battery charging: we plugged it in at about 2PM Local yesterday We came in at about 2AM local after watching the meteor shower. My son went to work at 12PM Local and the scanner said it still had 3 more hours to charge. (he listened to it last night.)
Conclusion is that it has a "Smart" charger (good), and it takes a long time to charge if you are using it (Not sure if thats good).
Once its fully charged, I'll let it run at medium volume and run it till the batteries go to "parade rest" and see how long it takes.

Cheers all!
Tom

Jon:
Thanks for the info. Do you know if you are able to use alkaline's or
lithium non rechargeables at all ? thanks

Wayne

16993. Re: [ArizonaScanner.com] ¶Home Patrol-1

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-12-15 04:07:29 UTC
From: Jon M. Hanson
Topic: 16983 Message: 16993

That's not a problem. The radio will ask you if you want to charge the batteries that are in there in case you have non-rechargeable batteries in it.

Sounds like Uniden has done their homework on this radio. Thanks for the
fast and useful information Jon I really appreciate this.

Wayne

From: Trip
Topic: 16995 Message: 16995

Hi All A while a-go I was asking for some help to program up Our scanner
a 300 ch dual trunk Pro 2053
and was looking for some DPS and other Frq's to just load in... no one
helped :oP

anyhow after doing so reserach I have mananged to get a hold of a data
base from my ham radio friend and
have now also uploaded this to our Group at
Http://groups.yahoo.com/group/k4eez
<http://groups.yahoo.com/group/k4eez> in Documents.

here is a small list

460.180 465.18 5.00 MHz Plus 0 FM TAC-E 460.150 465.15

Sorry you didn't receive any help. If I'd seen your request I would've given you the DPS frequencies I have.

Thank you for the list of freqs you found. :)

Hi All A while a-go I was asking for some help to program up Our scanner
a 300 ch dual trunk Pro 2053
and was looking for some DPS and other Frq's to just load in... no one
helped :oP

anyhow after doing so reserach I have mananged to get a hold of a data
base from my ham radio friend and
have now also uploaded this to our Group at
Http://groups.yahoo.com/group/k4eez
<http://groups.yahoo.com/group/k4eez> in Documents.

here is a small list

17006. New Data Base for E.Mesa AZ

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-12-15 19:51:55 UTC
From: Trip
Topic: 17006 Message: 17006

Hello, Group
Ok my bad there was a bit of confusion going on, I took the Frq list from an Excel Document

and paste them in to a text doc to get rid of the formatting for some strange reason the Excel

Doc is set up to show only 1 digits after the Decimal Point and not four. My YL this morning

showed me how to correct the issues under Cell Format from the pull down menus and allowing

to show more than 1 digit after the Decimal then Apply. The Numbers was all there before but

hidden and after posting the Frq list to the group in the wee hours of the AM and looking back

I cant help but feel bad about the whole thing, so I Apologize in advance for any misunderstanding

and also hope this tip helps you guys out too in the process.

I have upload the entire Data base to the following Folder:

http://groups.yahoo.com/group/ArizonaScanner/files/0/
<http://groups.yahoo.com/group/ArizonaScanner/files/0/>

Enjoy.

K4eeZ.

Hi Jon,

I want to join the others in thanking you (and all respondents) for the thoughtful answers (and questions)about this scanner.

The Uniden site offers online user manual downloads based upon a model number code. Do you (or any of you others, don't be shy) know the required alpha/numeric code for this scanner?

Thanks again,

Rob

Yeah, the article you linked, Kevin, said that since there were a lot more pilots there would a lot more briefing.

I never heard anything other than 'dead air' as I said in my 2nd post, but it was about noon...when you said the chatter stopped. Figures. hahahaha

17013. GRECOM PSR500 frequency coverage

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-12-19 09:40:08 UTC
From: John H. Guetherman
Topic: 17013 Message: 17013

On my PSR500, PubSafty VHF-Hi search coverage is:
151.8200-151.9400
153.7700-154.4450
154.5700-156.2100
158.7300-159.2100
166.2500
170.1500

UHF search coverage is:
453.0375-453.9625
458.0375-458.9625
460.0125-460.6375
462.5500-462.7250
465.0125-465.6375
467.5625-467.7125

So, as you can see, it does not cover the State Land and Game and Fish channels in the 151 Mhz region, and it does not cover UHF EMSCOMM. It does cover MURS/Business channels in the 151 MHz range, and GMRS/FRS channels in the UHF range.

I'd like to know what other PSR500/600 scanners cover in their PubSafty search ranges. Would other owners care to take a few minutes to check their scanners? I'm curious to know whether this is typical of these models, which could indicate a potential flaw in the software/firmware, or is it limited to maybe a few scanners, like mine?

John
Peoria

17014. Re: GRECOM PSR500 frequency coverage

Yahoo group: ArizonaScanner (2007 — 2012)

From: ftlaud_dj
Topic: 17013 Message: 17014

The scanner covers all the bands you're interested in, you can easily setup a custom frequency search range, however a suggestion, get a copy of Win500 from http://www.starrsoft.com/software/win500/default.asp it will make programming the unit extremely simple and fast. You can try it before you buy it for 30 days then after it's a small amount to pay for the ease of programming that unit. I have one and have been using it for about 2 years.

The issue that you're running into is that the pre-programmed searches aren't covering the portions of the band you're interested in.

You might try asking over at radioreference.com in the GRE section and see if you might get a better response from a wider variety of people and locations and DonS might chime in also.

17016. Uniden Bear Cat / Sports Cat 180

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-12-22 02:53:06 UTC
From: Trip
Topic: 17016 Message: 17016

Hello Gang

a while a go I bought brand new in the store a Bear Cat / Sports Cat 180 made by Uniden
its been a while sence I have used it, and the last time i did, I replaced the battery back
with 2500 Ah for longer run time...

anhow today my YL asked me if I could reprogram the scanner, wish it had one of the CIV data port
but it dont, is there a way to Reset the scanner so all the Programed memerys can be erased

E.G
by pushing and hold down sertin buttons to do a radio reset EG my Icom 706 MkIIG
if i hold band button up and band button down and hit the power button it will do a reset

??? ??? ???

thanks for any help

Most of the Uniden scanners will do a factory reset if you hold fown the
[2] [9] & [MANUAL] keys while turning the power on.

You can find this information at Radio Reference (http://www.radioreference.com/apps/db/?sid=848). Program the White Tanks control frequencies for the West Valley.

Thanks, John. I did program in the Control frequencies, however, I receive nothing from the West Valley. I am limited to an indoor antenna and have the Sierra Estrella Mountain range blocking the signal path from the WhiteTank Mountains.

John

Can you hear the data channel if you just manually tune the control frequencies? It's a constant noise so it's easy to hear. If you can hear it then you don't have a signal path problem.

You might try the Central Courts Building site. It's downtown and carries all major law enforcement talk groups. The Oatman site is probably best for you, but the TGs on it only appear when a unit in the area (Gila Bend) affiliates. Confirming you have it programmed as a Motorola Type II system and NOT P25.

What kind of scanner?
Sent via from my BlackBerry Torch. Please excuse terseness.

17023. Topaz Simulcast Reception issues East Valley(Gilber)

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2010-12-27 14:33:01 UTC
From: RandyW
Topic: 17023 Message: 17023

Just got a Pro-106 and all seem great except the TOPAZ simulcast reception for Gilbert / Mesa PD/FD.

I read that Simulcast causes multipath issues. If I lay the scanner in just the right position (varies by room) I can receive fine, other wise it varies from no reception to choppy audio.

Signal Strength is strong. I even purchased a RS800mhz antenna and no improvement.

All other NON simulcast P25 systems work great.

Anybody seen this and have a fix that does not require a Yagi?

Thanks

Randy

Since it's a simulcast system you might try turning on the attenuator for that system. I have an antenna in my attic and it helped tremendously with reception issues.

I've heard cases of people who're right around the corner from a police incident in Mesa and still only get choppy reception. I don't pick up Mesa PD At. All. not even a little bit. Even with the 800mhz antenna. Usually I have no problem picking up Mesa FD, although I just noticed that I haven't heard them at all today.

Anyway, I'd also like to know if anyone has figured out how to improve reception of Mesa PD.

Multipath distortion is one of the "concepts" that the Motorola engineers just don't get. Anyone who thinks they can transmit the same info from multiple towers on the same frequency doesn't have any practical experience.

Art;

I don't know what your 'commtech' experience is, but there are plenty
of simulcast systems across the globe that work wonderfully.
Including the ADOT trunker in/around Phoenix.

Just because a scanner doesn't work on one, doesn't mean there's
anything wrong with the concept or implementation.
It only matters that the subscriber units [mobiles and portables] do work.

It's bad enough when you get signal reflections along with the direct signal from a single transmitter!

From: Jim Wick
Topic: 17031 Message: 17031

Does anyone know what frequencies Speed Channel might use for operations at the Barrett-Jackson? Several years ago while attending I could listen to the on camera announcer's stage mikes and the producer's operations in one ear and the broadcast in another, picking up good tidbits and perspectives. Speed channel operates in the 450-473 MHz area and the primary channels I listened to were: 450:700 & 450.8375. Range seemed to be limited to about a mile. Anyway, the last couple of years I could not find them even with search. Any thoughts? Thanks. JW, Chandler

A quick Google for "speed channel frequencies" brought up this Speed Channel forum post from 2 1/2 years ago.

<http://www.speedtv.com/forums/viewthread/165695/#3646125>

460.8625 - SPEED WORLD CHALLENGE OPERATIONS

450.1875 - SPEED CHANNEL AUDIO #1

450.1625 - SPEED CHANNEL AUDIO #2

ADDITIONAL SPEED CHAN. FREQUENCIES 450.2375, 450.3375, 450.4375, 450.5375, 450.6250, 450.6875, 450.7375, 450.8875, 467.6000, plus other frequencies in the 450.0000 to 451.0000 range spaced 12.5 KHz (.0125 MHz) apart may be used.

17036. 460.1375, DCS 023 in Phoenix?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-01-30 11:52:20 UTC
From: John H. Guetherman
Topic: 17036 Message: 17036

I'm wondering who uses 460.1375 with a DCS of 023 that is audible in the Peoria area? It sounds possibly like law enforcement but the transmissions aren't very long to get a better idea of who it is. The SWFD10 lists channels such as 460.1875 for DPS Metro North patrol and 460.1625 as DPS Metro Southeast Tac, (both listed on page 34) but I'm not sure if these are valid future use channels, or not.

John

460.1375 DCS023 is Salt River Indian Community PD.

I am wondering about 460.1675 and 460.1875. I have monitored these since the SWFD 10th edition was released. I have never heard them active.

its AZDPS GETEM SQUAD 460.2750,460.5000. However Phx DPS CI is commonly paired up with Dps d11 towers, so you will more of that than anything else. as far as any real activity its pretty quiet.they do most of there work on other forms of secure communication,like cell phones etc.

GIITEM [Gang and Immigration Intelligence Team Enforcement Mission] is
a state level task force operated by DPS.
<http://www.azdps.gov/services/Gang_Enforcement/>
It includes officers from other law enforcement agencies, not just DPS.

Yes, they are a CI function, and sometimes operate on the local CI channel.
In the metro Phoenix area, they mostly operate on the RWC, on their
own encrypted talkgroups.

And, Yes, the CI channels are sometimes doubled up on a console with
either D11 or State.

I recall a while back that the Tempe Police Department (TPD) changed radio systems, going from the 800 Mhz. band to the 700 Mhz. band. Now that I have a scanner that covers this band, I would appreciate it if someone could provide me with the active frequencies the TPD uses. In addition, does anyone know where the department transmits from, i.e., South Mountain, A Mountain,etc.,or might they simply be "ground tower sites" in the Tempe area?

Thank you in advance for your assistance!

John

17050. Re: Looking to purchase scanner?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-02-15 02:13:01 UTC
From: RandyW
Topic: 17041 Message: 17050

From my Research, the Radio Shack Digital Pro-106 (Handheld) (Made by GRE PSR600) are well liked. The Desktop version is about 50 more from the shack.

Look for sales. I got mine for 249.00 before Xmas. However the lowest I've seen it since is 299.00

The GRE's are 400 - 500 range, but include a AC adapter and Data Cable.
Figure 36 for the cable and 20 for the power adapter from the shack.

Some freq's from Tempe, Maricopa , Chandler, Phoenix and maybe Gilbert (Maybe, I have yet to encounter any there) are encrypted but most Fire and Dispatch are open.

If you are interested in ICE/ Customs forget.. All encrypted, as I suspect most Federal Freq's are.

Currently DPS is un-encrypted, as it is not yet Trunking, however I heard, due to FCC requirments all FM must be Narrow soon that Arizona DPS will be going Statewide to Encrypted Digital Trunking by the end of the Year. (Sounds like California).

Checkout www.radioreference.com for the areas you are interested in. The talkgroups that carry encrypted traffic are marked as such.

If you choose to purchase a RS - GRE digital, be sure to have the programming cable, as these are not easy to manually program.

There are several Programming software packages avail that support these scanner, and all have a fully functional trial period.

I like WIN500, however try them all and make your own choice.

Check the scanner specific groups here and the Posts on radio reference.

Once you choose, find somebody in your area that has the same scanner and they can get you started by cloning what they have programmed.

If you get the GRE/Radio Shack, check out www.marksscanner.com for an easier to read manual.

Have fun

Randy

It's been awhile since I've heard them, especially since I only monitor on occasion from Chicago, but I know Phoenix used to do a tone (like for the minitor voice pager) test once a week and they used to set them all off for 1st or 2nd alarms. Do they still do the tone test in the morning? If the do, when do they do it? Does anyone have a recording of them all that they could send me? Thanks.

Andy

Randy;

I would love to know where these rumors come from.
Highway Patrol will NOT 'be going Statewide to Encrypted Digital
Trunking by the end of the Year'.
You got several hundred million to finance that?
The state sure doesn't!

There will be changes, but that isn't one of them.

ADOT, on the other hand, IS looking to do 700 MHz P25 trunking statewide.

WalterH

PS: Narrowband does NOT = digital.

Walter,

I know Narrow <> Digital, however it does require equipment upgrades.

I was at a HamFest in Jan @Thunderbird. One of the guys at the ARRL table whom is a spectrum planner? for Raytheon told me this.

This is why I phrased it as a RUMOR and not Fact, as I could not confirm it.

Hope you're correct.

Randy

Phoenix doesn't use tones for most of it's dispatching, only the airport some BC's, Buckeye, Tempe and Gila Bend are toned out. The rest are POCSAG type pagers and printers and an alert box in the station.

17058. Re: Looking to purchase scanner?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-02-17 00:08:16 UTC
From: Joe S
Topic: 17041 Message: 17058

Most of the PD's in the valley on the RWC or TRWC do have some encrypted talkgroups, but nothing is 100% encrypted and all the dispatch operations are in the clear. DPS may at some point in time go to a statewide system, encryption will not be used on normal talkgroups. Testing has been done and there is a site on South mtn that is carrying DPS traffic from D4, Metro West, East and Central. Phoenix Fire will be going narrowband in the very near future, they also will not be using the same CT tones and will be switching to DPL and using a different DPL for each channel.

17060. Phoenix Regional Dispatch Pager Tones

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-02-20 13:08:01 UTC
From: John H. Guetherman
Topic: 17060 Message: 17060

I believe that weekdays, at around 7am, they do a pager test from one of the transmitter sites. One day they may test from the South Mtn site, another day they may test from the North Mtn site, etc. I'm not sure if they do all the tones at every test, or only certain tones depending on the day. I'm not always awake to hear the test, so I don't know if there's some kind of a standard schedule or not. But give a listen to 154.190 around 7am weekdays if you are able to.

You might also try listening when Phoenix is about to have a major storm. Phoenix Regional Dispatch will go in storm mode and sound the tones before that. Course PHX doesn't have many severe storms but later this summer you might be able to catch a few.

From: John H. Guetherman
Topic: 17062 Message: 17062

Currently there is some radio testing being done on various G-deck channels of the RWC. I'm guessing they're setting up for NASCAR this weekend. They've mentioned a command post So G deck may be where law enforcement will be operating in and around P.I.R. in Avondale this weekend. FYI for anyone interested.

The ARA list only a few repeaters. If you want a list of all of them see AzRepeaters.net
The "Arizona Repeaterss Directory" has verified listings by county.

There's several dozen of us that regularly yack it
up on 146.52 simplex in the Valley. We can regularly
commo with stations from about
- Tonopah on the west
- Apache Jct on the east
- Carefree/Cave Creek/Anthem on the north
- Casa Grande on the south

With my 3x 5/8 wave omni at 33 ft, I've talked to
Parker, Tucson, Globe, Payson.

Most of us can talk with Tucson nightly.

Big, flat desert. 50w or so goes a long way.

17086. New radio FT 250R

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-03-13 07:02:01 UTC
From: Ed Cifelli
Topic: 16606 Message: 17086

Open the owners manual and find the section that has the frequency coverage for the receiver section. This will tell you whether or not it will pick up the police/fire/ems depending where you are located. Also pls note that I changed the subject.

Don't forget to the Gilbert hospital repeater 449.825 PL-100.0 The East Valley Repeater Group! There is also a 2m simplex link up there too?

  I have a pro 97 that I bought recently. It came with a Radio Shack steel telescopic antenna. I like the antenna but carrying it outside and in the car could be dangerous as I'll bump into something. I'd like to clip it on my belt. Is there anywhere in Phx I can get a used BNC rubber duck fairly cheap?

You should start a new message instead of replying to an unrelated thread.

You'll have to be a little more specific on where you are before your question
can be answered.

Gilbert is P25 digital so you won't be able to receive police and fire on that radio.

From: trunkh8er
Topic: 17062 Message: 17093

Your tax dollars hard ar work...

The U.S. Department of Homeland Security's (DHS) Science and Technology (S&T) Directorate today announced the kick-off of a 30-day multi-band radio pilot for emergency responders, to begin Friday during opening day of NASCAR events at the Phoenix International Raceway. Fifteen participating law enforcement and emergency management partners across the state will incorporate technology into their daily operations and provide feedback on its utility.

The multi-band radio enables police officers, firefighters, and other emergency response and management personnel to use a single mobile radio to communicate with multiple agencies and jurisdictions operating on different radio bands. The multi-band radio can replace up to five different radios and operate on a single radio band, at a cost comparable to just one of the existing high-end portable radios□providing responders with the cutting-edge communication capabilities necessary to successfully respond to emergencies.

The point of your comment is lost on me.

If one of the Unity radios can do VHF [ADOT, fire, DOC, SO's, etc.] ,
UHF [DPS and some Feds], 700/800 MHz, analog, conventional P25 AND P25
trunking, for the cost of an XTS5000, then wouldn't it make sense to
use the Harris instead of the Motorola?

And wouldn't it also make sense to actually try them in the field
BEFORE you deploy them across the country?

Walter,

You're dealing with the Feds. "make sense" usually doesn't apply. I think this is a "field trial".

Ed;

My reply was directed at trunkh8er's sarcastic lead.
I think this is actually a step in the right direction.

I wish they'd done more 'field trials' of the P25 vocoder before
deciding to implement it in noisy environments.

My take is, DHS will be willing to hand out grant money to purchase
the Unity [by Harris] and/or Liberty [by Thales] to FINALLY get some
real interoperability in the field. But only after some extensive
testing by various entities. They don't want to get stuck between the
same rock and hard place they did when they bought all those
ACU1000's, the vast majority of which are sitting in storage, never to
be seen again. Wonderful piece of technology, but WAY to difficult to
install/program/operate for the casual user.

Why not get some RF-9914F Bury-Flex from Radioware? Its 40 cents a foot cheaper, has near identical spec and takes normal PL259's. I was gonna buy the LMR myself until I found this stuff. I've been very happy with it.

Compare the specs:

Subject: [ArizonaScanner.com] Re: Mesa, Gilbert fire feed from RR

Why not get some RF-9914F Bury-Flex from Radioware? Its 40 cents a foot cheaper, has near identical spec and takes normal PL259's. I was gonna buy the LMR myself until I found this stuff. I've been very happy with it.

Compare the specs:

http://www.radio-ware.com/products/rf9f10.htm

http://www.m2inc.com/main%20html/lmr400_a.pdf

Try this .. good price and great cable .. it's what I have on all of my scanners ..
http://www.jefatech.com/product/LL400-BTF/Low-Loss-400-Coax---By-The-Foot.html

Only $0.59 per foot

From: John H. Guetherman
Topic: 17108 Message: 17108

I'm curious if there's any users of TriSquare's eXRS radios on here? It's a fairly new Part 15 radio service that uses Frequency Hopping Spread Spectrum technology in the 902-928 MHz ISM (and 33cm Ham) band. With the FHSS, the radios are unscannable. Although a little more expensive, it's an alternative to FRS radios.

If anyone has used them, have you done any range tests with them?

I myself have a pair of the TSX300's.

Go for the 996XT for mobile. And if you're coming from an XT, stay with the XT. They handle muti-site systems differently and better than the x96T units.

What type of connectors are they quoting you for that price ?

You can purchase lmr-400 for 99 cents a foot from Ham Radio Outlet, HRO, in Phoenix and they also have connectors depending on what type you need.

You can also get fully assembled cables from them.

Mike

That sounds about right.

Retail for a BNC is $11.50.
Retail on a PL259 [UHF] is $3-4
$1.05/ft for LMR400 = 10.05

Plus shop rates for installation using the correct [expensive] tool.

17125. New Glendale Public Safety Radio Appropriation

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-04-01 17:10:00 UTC
From: chrisf8657
Topic: 17125 Message: 17125

In today's Arizona Republic, there was an article in the Glendale Republic that shows this years budget - (this is from memory) One was for 100K+ in a "Digital Radio system".

This concerns me - it probably means encryption.
If this is the case, I am no longer buying any new scanners until they have digital decryption (and if it takes a software program hooked up to a PC over time to find the encryption key - whatever time it takes).

We have gotten to the point, IMHO, that scanning listening is no longer viable except Fire & Ambulance - and I'm sure in years, they will be encrypted too.

Our hobby is already being killed, and about to be dead, AFAIAC. Glendale is one of the last open P25 systems we can listen to - I have *NO* issue if they encrypt SWAT and Undercover operations - everything else needs to be left open. Already, with sensitive information, officers say to 21 them (call their cellphone)....

Chris

They're already P25 so they don't need a new radio system to go encrypted, they can do that now. The money's probably for additional radios and/or additional tower sites on their current system. $100,000 doesn't sound like enough for a completely new radio system.

There will never be a way to listen to the encrypted communications outside of having a radio authorized for the system with the appropriate key.

Don't despair too much at this point. I think when Phoenix got their new digital system they were completely encrypted. There was some push-back from hobbyists and journalists and they unencrypted a lot of the channels.

He doesn't know what he's talking about. There hasn't been any "new law" that I've heard about.

The only place I've heard of people having trouble taking scanners is the Phoenix Zoo. I think they recently switched to a Motorola TRBO system and that can't be monitored by a scanner anyway. I'm not sure why the zoo would care and I've been there several times with a scanner and have never been questioned about it.

Must have been a mall security officer? There is no such law in Arizona.
It is perfectly legal to listen to any scanner in your home, your car or on
your hip. "Radio Shack. You've got questions, . . they don't have
answers."

Chris, you're clearly being a "Chicken Little" here.

All you know is "Digital Radio System," and unfortunately, your mind then converts that into some lame fantasy about everything being encrypted, and you boycotting digital scanners until someone comes out with a product you can use to decrypt the protected comms. All is very far-fetched, and clearly it's not healthy for you to be so pessimistic, especially when you have no facts to base it on. To really shatter your fantasy, look up the ECPA of 1986 -- it's illegal to decode encrypted communications you're not a legitimate party to -- that means you're not going to find a DES or AES decoder kit for scanners on the market 5 years from now,

People like you were also clucking "THE END IS NEAR, THE END IS NEAR!" 25 years ago when trunked radio technology was being phased in.

Your opinion about what should & should not be encrypted really holds no value (nor does mine), but saying that cellphones provide a legitimate, secure means of comms for road patrol officers in lieu of encrypting their dispatch channel is just plain dumb & weakly supports a scanner-geek mentality but not at all a public safety efficiency operating practice.

Tim

In today's Arizona Republic, there was an article in the Glendale Republic that shows this years budget - (this is from memory) One was for 100K+ in a "Digital Radio system".

This concerns me - it probably means encryption.

If this is the case, I am no longer buying any new scanners until they have digital decryption (and if it takes a software program hooked up to a PC over time to find the encryption key - whatever time it takes).

We have gotten to the point, IMHO, that scanning listening is no longer viable except Fire & Ambulance - and I'm sure in years, they will be encrypted too.

Our hobby is already being killed, and about to be dead, AFAIAC. Glendale is one of the last open P25 systems we can listen to - I have *NO* issue if they encrypt SWAT and Undercover operations - everything else needs to be left open. Already, with sensitive information, officers say to 21 them (call their cellphone)....

Invest a few dollars in the magazine "Monitoring Times". They routinely evaluate scanners both entry level and professional.

I wouldn't use the term encrypted. Your current crop of scanners simply wouldn't be able to decode them. An agency could encrypt their channels, but you'd never know since you wouldn't be hearing them. Will future scanners be able to decode? I sure hope so. But as someone earlier said, "Don't hold your breath." I don't think I'll be buying any scanners soon on the chance that they will be 'bricked' within a few years. These systems are already in existence. I'm not a radio engineer and I don't work for Motorola, ... "but I did once stay at a Holiday Inn."

I don't understand what would be different about Phase 2 than Phase 1. Companies like Uniden and GRE are licensors of P25 (or I guess whoever makes their vocoder chips is the licensor). Why would that be any different when things move to Phase 2?

I don't understand either? But there are scanner enthusiasts who currently cannot monitor their home agencies. Probably comes down to simple economics? Why would GRE or Uniden want to spend money that currently only affects a certain portion of their fan base. Hence why I'll wait before spending another dime on this hobby.

You don't understand, because you haven't looked into what the differences between Phase I & Phase II are.

P-25 is a lot more complicated than just being a standard analog<-->digital codec.

P-25 Phase I uses Frequency Division Multiple Access.

P-25 Phase II uses Time Division Multiple Access -- a very different waveform type than FDMA.

GRE's PSR-800 & the base/mobile version being released this Fall *MAY* be able to do Phase II with a major firmware update. GRE isn't saying one-way or the other because they're looking into it & don't want to make any promises yet. If there's a lot of $$$$ involved, GRE may want to wait to see how the Phase II market develops before investing their resources.

Tim, first off, I probably did read a little too much into the "Digital Radio System" thing, second off, you read a little too much into my post yourself.

I am not being a "Chicken Little" or saying the "end is near", what I am saying is that so many public safety systems are going encrypted that the hobby is losing it's interest to me, because there will be nothing worth listening to, nor the ability to know what is going on when something happens around you, in the future if encrypted systems keep popping up - especially when there are systems Scanners can't even pick up because of their proprietary nature.

I didn't say, nor inferred, that cellphones are a better choice than encrypting their dispatch channel - I simply stated that is what they are doing NOW.

And BTW, I am not a "Scanner Geek", FYI, I haven't even switched my scanner on for over a month.

Chris, you're clearly being a "Chicken Little" here.

All you know is "Digital Radio System," and unfortunately, your mind then converts that into some lame fantasy about everything being encrypted, and you boycotting digital scanners until someone comes out with a product you can use to decrypt the protected comms. Unfortunately, in expensive and entry-level aren't going to enable you to listen to Phoenix PD. They are digital and you need a digital scanner to listen to them, plus quite a few other law enforcement agencies. I have a Pro-106 from Radio Shack. A good website to check out is scannermasters.com as they have a sort of survey that you can take that'll help you decide which scanner is best for you

I believe the PSR800 can work on a Phase 2 system, but since there isn't a set standard yet it may only work on the few that are working on the east coast at the moment.

From: dave
Topic: 17125 Message: 17146

Yes, GRE is claiming successful decode in the Washington D.C. area.
And yes, final specs are not yet in place for APCO-P25 Phase 2, so
although it is encouraging, it'll be 2 or 3 or more years before we
see any of this activity in the Phoenix metro area. I think I'll still wait
before making another scanner purchase. The 800 sounds like a great
unit and I would gladly accept it as a birthday or Xmas gift, . (hint, hint,
to the Mrs. looking over my shoulder). Ouch, . . she also advises not
to hold my breath.

I believe the PSR800 can work on a Phase 2 system, but since there isn't a
set standard yet it may only work on the few that are working on the east
coast at the moment.

Argh! it's sad & frustrating how much ignorance & misinformation is on this list.

The core Phase II standard was set & published late last year. Will there be some minor additions? Probably, but what has finally been set allows the industry to start building the Phase II systems now.

http://www.tiaonline.org/news_events/press_room/press_releases/2010/PR-1117_TIA_Reaches_Standards_Milestone__Project_25_Phase_.cfm

GRE is claiming they were able to decode an unofficial Phase II (TDMA-X) talk group on a Phase I trunked system. Big difference. I spoke to the GRE Sales Manager & some engineers about this specific matter a couple weeks ago at IWCE.

17151. The scanner market - where's it going?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-04-03 19:00:14 UTC
From: m50steel
Topic: 17151 Message: 17151

I can't argue tecnicals matters on this subject but in my mind the biggest threat to the scanner market is "LIVE FEEDS".

1) Why buy when you can listen on the internet? You know there's an app for that! Just listen on your i-phone instead of forking out big dough on a hand held scanner. I'm sure scanner manufacturers are calculating potential unit sales with this activity going on. Fewer units sold means higher cost for us. Or worse they may just get out of the market.

2) World wide accessibility. No longer does the radical faction need to send out an advance team to scope out the local law enforcement activity. You can gleen a lot of intelligence listening to a scanner from the comfort of your home 13000 miles away or maybe somewhere south of here. They're not encrypting channels because of the common criminal trust me.

I like live feeds. I can listen to my brother at work in New England. But I can't help think we are shooting ourselves in the foot with this kind of activity.

Hi there John,

To answer you, here is my points:

1. Because every possible system is not broadcast. For the ones that are, they are on a "Scan" setting, which will pull any active talkgroup - for any area of the city - which you may not be interested in. A scanner allows you to choose certain channels/talkgroups only YOU want to listen to. For example, with them set like that, a major incident you are interested listening to on one channel will only come up when the others are not transmitting - the first one that comes up on the "scan" setting that is just as busy will miss the conversation on the other channel - so you may miss out.

2. Well, if that's what your interested in fine. Scanners are more for local area listening - your comparing Apples to Oranges here. No scanner can pick up things 13000, much less 1300, miles away, much less more than about 100 miles, AFAIK, without a VERY big and powerful antenna.

As for "radical faction".Um, OK.

You already seem to have your mind made up on scanners, but regardless, I hope my details help. I'm sure other members will chime in.

I think the live feeds are interesting for someplace where you aren't and want to monitor. I listened to the feed for the last Space Shuttle launch in Florida and it was really interesting hearing all of the activity related to the launch (they literally had to almost abort the launch at the last second because of a problem on the range). For local stuff I would always choose my own scanner because I have it set up to listen to what I'm interested in. For the streaming broadcasts you are at the mercy of what that scanner owner thinks is worthwhile. I do wish the streams had the ability to say what the scanner was stopped on. I don't know if it would be worthwhile to have a webcam pointed at the scanner display or some other way of passing the channel information back.

I don't think the proliferation of streaming scanners over the Internet has any affect on sales. I'd be willing to bet that most people listening to a live stream have a scanner of their own. If scanner manufacturers were worried about this then they wouldn't provide features enabling the streaming of the audio (Uniden passes the data back of what's on the screen back to the computer and some even pass the raw trunking data for external analysis).

I don't understand what would be different about Phase 2 than Phase 1. Companies like Uniden and GRE are licensors of P25 (or I guess whoever makes their vocoder chips is the licensor). Why would that be any different when things move to Phase 2?

Check out the NEW Southwest Frequency Directory 10th Edition -
www.ArizonaScanner.com - The resource local experts wrote and professionals rely on!Yahoo! Groups Links

Not that it pertains to any valley changes butt a prime example of that would be albuquerque,nm. they have there system set up on a edac-provoice system, that no scanner,Or should i say no domestic scanner can decode.supposedly this open sky system that some agencies are going to like san diego and las vegas,although they still have,nt done so. is the same situation. supposedly it can,t be monitored. it could easily happen here.for that matter everywhere if the goverment decided to do it.

>

If you find a basic non-digital, non-trunking tabletop or handheld scanner at Radio Shack, you can monitor Department of Public Safety, Maricopa County Sheriff Posse Search and Rescue, private, commercial and some military aircraft, Game and Fish, Capitol Mall Security, shopping malls, railroad, city buses and other agencies that aren't yet digital. If you carry the handheld to a hilltop, or have a decent outdoor antenna for a base unit, you can even hear surrounding county agencies.

And, if you type in the VHF/UHF business frequencies with your basic scanner, you can hear a lot of activity from shopping malls and public events.

If your basic scanner advertises "800 MHz", but isn't "trunked" nor "digital", you can still monitor Paradise Valley, Goodyear, and Tolleson Police Departments.

Just look for something in the less than $100 range to get started, and if it intrigues you, consider a more complex scanner.

Thank you for your interest,
Robert

It has been a while since I moved out of the valley, but as a plan B, you might want to look at some of the pawn shops to see what they have. If you go with an RS scanner, the procedure is almost the same for all of the for entering the frequency. Put some AA batteries in your pocket and check the shops. When you see one you like, ask if you can see if it works. Put the batteries in it and put the weather freq from South Mountain. (Don't member what it was). If it works, you might just have a scanner for yourself. I know I had put one on layaway for my nephew and about and hour later found the same scanner for half price.

*** Tucson Ham Radio Picnic ***

Saturday, April 16th, 2011

Christopher Columbus Park

Ramada #4

12 Noon - 4pm (or later)

www.tucsonhampicnic.com

It's almost here. The Spring edition of the Tucson Ham Radio Picnic is about to take place. Please join us on Saturday April 16th at Christopher Columbus Park on Silverbell Road at Noon in Northwest Tucson for this great event. Visit the website for ALL the details. This is a POTLUCK and everyone is asked to bring something to share. A signup list is available on the website. Choose something we need or bring your own idea. Either way, let us know on the website so we can list it. Once you sign up for the Potluck, we will count your RSVP and buy Hot Dogs based on how many people sign up. If you don't give us a count when you sign up for the Potluck, we will email you back asking for a total number of people you will be bringing to the picnic.

Our Ramada at Christopher Columbus Park is excellent for the family. There is a playground right next to our Ramada. There's a lake for you fishers. Plenty of room for the kids and adults to run around.

We are also looking for demo stations. Feel free to set up and operate a station and help promote the hobby to the public. If you are bringing a demo setup, please let us know so it can be added to the website.

Talk-In will be on 146.520 Simplex.

This is a family event. Bring the whole family out to this wonderful event. The kids will have a blast. Special Attention to the kids is ALWAYS a priority.

Please help spread the word about the Picnic and forward this email to all your Ham Friends and spread the word over the air. See ya at the picnic.

I know there are scanner meetings for this group out their just that they are to far from me, so I was wondering if any folks would like to get together on a sat or Sunday at fiesta mall for pizza or something? We can bring our scanners and talk about scanner related items! Send me and email back on what you think. my email t_billman@... .

OK, I'll bite.
What's a 'reverse' auto-patch?

An auto-patch is where a radio can be connected to the PSTN.
Whether it's in-bound or out-bound makes no difference.

A reverse autopatch allows someone to call in to the repeater on the phone system and be broadcast over RF. I'm not sure how you handle PTT on the phone, maybe by pushing on the of the DTMF keys can you switch back and forth from talk to listen. I don't think reverse autopatches are very common.

I've been in two-way for over 30 years, and I'd never heard one
referred to as 'reverse'.
In-bound usage is mostly commercial, not amateur.
I've worked on several.

And phone side PTT is not a problem, as this is [as almost all other
auto-patches are] full duplex on a repeater.
As long as the call is connected, the repeater is transmitting.

I've heards the terminolgy in both ham and law enforcement circles. I'm surprised you haven't, Walter but then again you're younger (I think).

And its not unusual for mall security folks to have it when their admin staff is not there to answer the phone and the security guys are out in the mall, like nights and weekends.

Jon: you know the rule: there has to be a control operator and that's the guy with the radio and PTT. It has to be setup so his PTT mutes phone input and he has to be able to terminate the phone connection with DTMF or some similar method.

Most malls use this feature Superstition Springs, Paradise Valley, in addition to Fiesta mall use the reverse auto patch feature to receive and make phone calls the user (mainly security) press "*" to answer or to dial out and "#" to bring it down just like ham repeaters.

As Dan mentioned, this type of system is used by a lot of small, non-central dispatched, police agencies, especially in the South. You dial the cop shop and the officer in the field gets the call on his/her HT.

It's in use with PV Mall security on 462.2. It gets used mainly after the mall closes and someone working late gets locked out of the mall. I don't think many of them would know how to work PTT though.

17178. Best scanner model

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-04-11 13:11:56 UTC
From: Babysis.Babycakes
Topic: 17178 Message: 17178

I'm new to this group & would like some recommendations on which scanner would be best to get AJPD & PCSO feeds.

I know it has to be digital & trunking, but like I said I'm new to all this & would appreciate any suggestions.

Thank you.

Dan;

I'm not THAT much younger [I'm celebrating my 37th wedding anniversary
this year].

And it wasn't the system or it's use.
I've installed a few.

It was the use of the word 'reverse.

Apache Junction PD is on the Mesa Digital Trunked System. I would tend to recommend the Uniden 396T, 396XT, 996T, 996XT or the Uniden HomePatrol-1 or the GRE PSR-500 or PSR 600 (Or the Radio Shack clones of the GRE's).

The Pinal County SO is on conventional VHF so nearly any scanner will work for them.

Overall, I would tend to say your best bet would be the Uniden HomePatrol-1. It is a great unit and should work well for your needs. You can find it locally at Ham Radio Outlet in Phoenix and Fry's Electronics also has them.

Maps of all precints (Phoenix, Tempe, Glendale, etc.) are available in the Southwest Frequency Directory.

http://www.arizonascanner.com/

I'm sure the author would not be happy if I upload the Glendale map.

If you email the Police Department they will typically provide it..did for me years ago.

17190. Tucson area going digital?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-04-19 16:22:43 UTC
From: kwjw32
Topic: 17190 Message: 17190

Hello,

I'm currently using a Radio Shack Pro-97 scanner, which is triple trunking analog, to listen to mostly Tucson PD and FD.

I noticed Radio Shack has the Pro-106 on sale through the end of the month and was wondering if it's worth upgrading since it has digital capabilities. One motivating factor would be if Tucson PD was moving to digital or Narrow FM any time soon. Does anyone know when they plan on converting the Tucson Metro area to digital?

Thanks.
Kip

17193. Casa Grande going Encrypted?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-04-19 23:04:50 UTC
From: sh9730
Topic: 17193 Message: 17193

I only read a small part of a recent local newspaper article and didnt get much detail, but Casa Grande has recently approved 100K or so to add another radio freq. It also mentioned that they planned to encrypt some traffic so as to preserve privacy rights.

Doesnt say they are going digital that I saw...only the encryption.

Anyone have details? Are they going to encrypt main traffic, or just inquiry traffic (I assume the added freq is for an inquiry channel as they have needed one of those for a long time in CG - right now all name checks etc tie up the main dispatch channel).

Thanks in advance.

17194. Re: [ArizonaScanner.com] Casa Grande going Encrypted?

John;

The actual agenda item is online at:
<http://cgiis.ci.casa-grande.az.us/sirepub/cache/0/2zkoasqryda3pt45xsfykkm5/56579041920110
42444443.PDF>

It DOES mention 'digital encryption' to be available on one of the frequencies.

And I would think that the encrypted frequency would be for
tactical/surveillance ops.

Using it for records checks would make it unavailable for the above
mentioned uses.

Your best bet is to program all AAR frequencies into your scanner and see which ones are active. I live out in Buckeye, with my outdoor antenna, On a good day I sometimes hear radio chatter as far away as the UP Nogales Sub. For a yard frequency you might try 161.100 mhz. Active freqs in my Area are 160.320 (road Channel), 160.230 and 160.935. I have not heard anything on the RR police channel in a few years. There have been some dispatcher desk changes and lately I've heard radio chatter on some channels that I never heard used before.

I've had real good luck with antennas from DPD Productions. If you mostly listen to one specific band, get an antenna made for that band. I mainly listen to the Railroad band but the antenna does a good job when I listen to anything out of band. A multiband antenna like a discone is okay but if you spend a little more money and get an antenna made for the band you mostly want to listen to, you should get better quality reception for that band. One thing to really consider is: Don't try to save money when buying cable. Quality reception is only as good as the weakest link. There are many different types and prices of cable available, I used a cable company back east that cut the cable to the length I needed and even installed the connectors on it at a resonable price. Take a look at the DPD Productions website and see if they have what you need. They are in SoCal and you can email them about any questions you have. I have an HOA and I'm hiding the antenna in a tree with great results. If interested I can try and find the companies name I bought the cable from. They have a great customer service dept. When I told them what I was trying to do, they asked about how much cable I was going to use and even what band I listen to and then they suggessted what kind of cable would work best for me and it was not the most expensive cable thay had. I'm using buryflex cable.

The first few AAR channels are only used in Canada.
Scan from 160.215 to 161.565 MHz.
Some of the 161 freqs are inputs to PBX's with outputs in the 160 area
like 160.890 for example.

Robert R.

I have one outside my window on a 10' mast using RG6 as coax. I comes in the window with the other leads and has a F to BNC adapter on it for the scanner. Pick up a PS a good 30 miles away in Whiteriver on the Apache Res.

You might consider one of the 2 discone antennas that RS has. I find they work pretty good.

A Few of there radio's have DTMF keypads, usually the supervisors. When you press the PTT and either * or # it will activate or deactivate the patch. I have been told there radio system is also tied in with the fire system and and a few remote door buttons for after hours access. So they will get audible alerts about fire system status and if someone is at one of the truck court doors.

I have a "old" pro 2055 scanner i also have the arc300 software and cable to program it. dose any body have the freq. info, that will "still" work on this old scanner?.I am a old school analog monitor, and not sure about trunk systems or what this scanner will or will not rec. I am looking for all cities that are in maricopa, pinal, pima, santa cruz counties,for fire and pd that this scanner will still be able to pickup. I have all tucson freq allready. and I know a lot of cities have switched to freq.'s that i cant pickup. thanks for any help, if I am not asking for to much.

go to radio reference .com they should have everything you need. most of the agencies except pima county and a few tucson channels,you should be able to program it to your needs.

Gila Sub PBX
160.950 RX Mt Lemmon
161.160 TX 75 Watt mobiles
DTMF activated similar to ham radio auto patch with a really short fuse (timeout timer)so you will hear the users who are on hold key the mic a bunch.

Your best bet is to program all AAR frequencies into your scanner and see which ones are active. I live out in Buckeye, with my outdoor antenna, On a good day I sometimes hear radio chatter as far away as the UP Nogales Sub. For a yard frequency you might try 161.100 mhz. Active freqs in my Area are 160.320 (road Channel), 160.230 and 160.935. I have not heard anything on the RR police channel in a few years. There have been some dispatcher desk changes and lately I've heard radio chatter on some channels that I never heard used before.

17225. Tones VHF-Marine ch. 28 162.000

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-05-12 07:19:06 UTC
From: John Henry
Topic: 17225 Message: 17225

While searching through the VHF-Marine band I ran across a very noisy signal on the shore side of ch. 28, 162.000. I'm hearing a series of tones stepping up then down then up again, etc.. through the octaves. I'm wondering if anyone else has heard this? It's about 12:15am right now. It's not constant, it seems to come and go.

John

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-05-16 17:49:43 UTC
From: Ranger
Topic: 17227 Message: 17227

I will have my new coax this week I paid $35.00 + $8.00 for shipping for the LMR 240 coax . This should help bring some of the distance radio problems I am haveing with the Forest Service. They picked up 2 fires yesterday. During the day from 7:30 am till MT Ord goes down for the day the scanner will be streaming the Tonto and Rural Metro beings they help Tonto on some fires out in AJ. I have to do a search because I found out that I do not have all the tac and air to ground frequencis programed. Dispatch gives them out so fast over the air that I miss what they are saying. So if anyone hears any frequencies going out over the air please email me them so I can add them. Thanks.

compared to what ? What coax were you using before you wasted your money on useless LMR-240.

Compared to RG-8 or RG-58 you won't notice any sinificant improvement at 168 MHz, to see anything noticeable you would have to be changing from any of the RG types to something like 1/2 hardline.

From: thomas billman
Topic: 17227 Message: 17229

there is a big difference. I used both the 400 and the 240 before until someone helped them selves with it. When i had both cables i was able to pick Rural Metro up as far as Tuscan, The forest service came in very clear, I did have to use the ATT on the 800 because without it I could not pick the 800 up at all it was over loading the front end. Now at the time i had a pro2096 scanner . I now have a pro-197 so will see what happens.

Well.....No wonder you had problems.

That's 75 ohm cable, meaning you had considerable mismatch both at the antenna and the scanner.

And it has 1 1/2 times the loss of the LMR400 at 800 MHz.

Did you have 75 ohm or 50 ohm connectors on the RG6?

17233. Chandler PD

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-05-18 16:13:40 UTC
From: John
Topic: 3893 Message: 17233

This morning I turned on my scanner, only to hear almost no traffic. The only thing I heard was a Patrol unit going 10-8, followed by a comment that he was on the "legacy" system. Where have they gone??? RR info has not changed from what I have programmed (which worked fine yesterday).

I think they're on the RWC - although I'm out of town and can't verify.

They are now on the RWC Simulcast C. Check the 2400 range talkgroups,
they should be in that area.

1.5 to 1 SWR, hardly a "considerable mismatch" Should work fine and I have never seen 50 ohm connectors sized to fit RG-6.

Also it could be considered a mismatch if he were transmitting. But he is not.

John et al,

Look for Chandler PD on the RWC TRS. I've just added some TG's for you.

http://www.radioreference.com/apps/db/?sid=2508

Please note, it is expected that they will be active on the TG's between 2469 and 2499 inclusively.

Most will be enrypted.

Please submit updates to the RWC TRS database on RadioReference.com and I'll update it for everyone.

Thanks,

John

That depends on what channels/frequencies you are trying to listen to.

Buckeye is currently on the Regional Wireless Cooperative P-25 Trunked System.

http://www.radioreference.com/apps/db/?sid=2508

I would put in the Frequencies for the White Tanks site as they are the most likely to have the traffic for that area.

I have posted a May 2011 Update to the Southwest Frequency Directory on the Scannerstuff Publication Updates website (http://www.scannerstuff.com/updates.htm). The update includes the new talkgroups for Chandler PD and Scottsdale PD, as follows:

Chandler Police Department
Now on RWC Trunked System - Use Simulcast C Frequencies on Page 92
TG: 2498 [Dig-P25] A02 Patrol A
TG: 2495 [Dig-P25] A05 Traffic
TG: 2489 [Dig-P25] A11 Event 1
TG: 2488 [Dig-P25] A12 Event 2
TG: 2485 [Dig-P25] B02 Patrol B
TG: 2483 [Dig-P25] C02 Patrol C
TG: 2469 [Dig-P25] J16 Jail

Scottsdale Police Department
Now on RWC Trunked System - Use Simulcast H Frequencies above
TG: 3401 [Dig-P25] A01 PD1 South Dispatch
TG: 3402 [Dig-P25] A02 PD2 North Dispatch
TG: 3403 [Dig-P25] A03 PD3
TG: 3417 [Dig-P25] A04 PD4
TG: 3404 [Dig-P25] A05 Events 1
TG: 3405 [Dig-P25] A06 Events 3
TG: 3406 [Dig-P25] A07 Traffic 1

Most talkgroups other than those listed above are encrypted and cannot be monitored.

Best Regards,
Dan Rollman

Hi John,

Opened up Buckeye, PD (RWC, TG's 4201 and 4202) in my HP-1 (indoors, RH77CA antenna). Those tran's that I received, from both TG's, from the "white Tanks" site, were solid and sounded great. Not very busy though, only about a hit every 20-30 minutes, or so.

Better than I expected, as I am near I-17 and Bell Rd., so I was probably lucky to grab those few hits.

Tonto NF has a 50 acre fire going with crews and engines on ordered. My scanner is stereaming the fire and very clear coms with the new coax that I added. Please if you listed to the stream today and hear any air to ground frequencies given out please email me. I am working today wont be home till 3. Tac channels will be hard to listen to with narrow band. You almost have to be ontop of the fire to hear the tac channels. I think they are using mt ord repeater.

It appears as though all the SPD talkgroups are on simulcast H with a control channel of 771.84375.

TG1795 (Phx FD L-1) is also appearing on simulcast H with alarm room dipatches.

Glad to hear about simulcast B. The H repeaters don't currently make it downtown. They're licensed for six sites, I wonder which ones are actually up & running?

And if the county system was working fine, why is the city spending millions on the RWC?

From: trunkh8er
Topic: 3893 Message: 17251

The Scottsdale system also appears on simulcast B. Does Chandler appear on any of the other systems?

17252. Mall Monitoring: Happy Valley Towne Center

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-05-31 21:51:43 UTC
From: kb7aqd
Topic: 17252 Message: 17252

I programmed almost 100 common business radio frequencies into my IC-U82 ICOM 70cm HT. I listened until I heard business users on a channel, then locked that one out. I continued scanning until I obtained this list of frequency hits that were voice, not data nor paging:

461.2375 461.1375 464.4875 462.8825 464.5500 466.3125 466.3375
467.8500 467.8750 467.9000 451.8000

And, with a Yaseu VR120d scanner, I also logged Walmart on 154.570 MHz, as well as highway construction on 158.400 MHz simplex.

Do you know who is using which frequency?

Many of the Common Stores use the Same PL and/or DPL nationwide.

Knowing the PL or DPL will help ID who you heard.

Here is a list to begin with. You will notice many stores use the 467 series frequencies, but all with different Tones.

http://scan-ne.net/wiki/index.php?title=Common_Standard_Department_Store_Channels

Post back what you get next time with Tones...

Because it wasn't working fine.
Scottsdale was being restricted to the Thompson Peak site only.
And, now being on the RWC they have access to a lot more RF resources,
including 'G' deck.

The only way to realy tell is someone needs to drop by the fire command center and pick a fire plan up anyone can get ahold of this. Most of the frequencies will be used off of the NIFC plan. I will around and see whay I can find.

There is 3 ways of find out what the radio com plan is for this fire:

1) you have to live near the county and you do a search between 163.000 to 174.000
2) someone from the group that is near the fire that will post them
3) if your near the command post get a copy of the radio com plan.

Most of the frequencies are simplex unless they put a local repeater up. This type of fire they are using the NIFC frequencies but which ones?

USFS usually uses TAC freqencies on the line. Try 168.05, 168.2 or 168.8

LEO freqencies being used include Apache County SO at 154.995 and Navajo County SO at 155.70.

Interagency communications and command center are using the AIRES system, Rx 155.475

Not sure what you mean they aren't listed on AZWildlandFire.

Here is a cut and past from there:

126.025....Air Attack Brovo, North side of fire. Very active frequency.
128.025....Air Attack, Helo operations
118.725....CoCo Helo ops
167.9875...Air to Ground
168.650....Flight Following
168,875....Division Echo,ground based Comms
128.025....Will ID later
118.725.... Air Attack, South Black River
Two frequencies that break the squelch but I cannot ID them. Help!!
166.750
118.950

17264. Strong RFI 146.525 this morning, Tue June 14

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-06-14 16:07:57 UTC
From: Craig 'Lumpy' Lemke
Topic: 17264 Message: 17264

Starting at about 0130 local time, Phoenix,
several of us have heard some very strong
constant signals on 146.525. It's holding open
the squelch on most everyone's receivers in
central and N Phoenix.

I'm at 56 Street and Thunderbird.
I'm hearing it at bearing 225.

Stations in Sun City West are hearing it at
bearing 135.

Anyone else with a beam and a VFO please
try and get a bearing?

Thanks -

UPDATE:
We located the stuck transmitter. It was a simple mistake by a ham in S Phoenix. Took us just a few minutes. Two of us narrowed down the general area with yagis, then two of us drove to the area and drove around with HTs with antennas removed. Drove right to the house.

Heard the doorbell coming across as we rang the bell..:-)

Situation resolved.

I'm amazed that the guy's radio didn't burn up. It started at 0130 this morning, we located it at about 1000 hrs this morning (just about 30 min after we started the hunt.

Nice catch!

And speaking of the HAM community, those interested and not yet aware, there is a new MotoTRBO repeater on Usery Pass. This is a 2 time slot TDMA all digital system and TS1 is linked on the DMR-MARC (http://dmr-marc.net/) network which currently has over 600 users globally and linked repeaters from Germany to Australia and all parts in between.

If you're interested in partaking and have a valid license, this is the future!

No they have migrated to a proprietary protocol "OpenSky" solution which is not monitor-able.

Now that said there are some very determined individuals that wrote some code that can run on a linux box that can decode the protocol, however it will not trunk track so it's limited to 1 active channel at a time rather than a locking on talkgroups and following conversations. Scanner manufacturers have placed a very low priority on adding this protocol to their scanners since there are a very small amount of these systems on the air and of that few even less are actually live with users due to problems.

That and the vendor flat out refused to provide the specs.

Transportation if using private frequencies would often be assigned freqs in the 451-452 range so scan 451.0 to 452.9999 now the catch is with most cab companies they don't dispatch and repeat like a police department would, so you may only get 1 side of the conversation on that channel, you'll also have to scan the 5mhz plus of that range as dispatch may be on 451 and the cabs may be on 456. This was done in the past to keep units from nabbing each others calls.

Another place to check are the 900mhz LTR systems, I know that I've heard some using some of those systems and worst case is check VHF but since that band is so polluted and unorganized, good luck finding them there, you'll have to be very patient.

Oh and don't forget they may just be using cellphones and data terminals with no voice.

Happy hunting

OpenSky has been referred to as OpenScam. It was abandoned by one state that tried it. It's been cited as a factor in the death of an officer.

Las Vegas Metro was movbing on to it last year. I don't know what kind of problems they have experienced.

I wish those guys at SRP & CAP well.

Las Vegas Metro PD still broadcasts normal patrol traffic on their VHF frequencies in the clear, but they do have the digital "ting" echo to them when they transmit. Oddly enough the radios still go digital and have bad areas as if they were already on an 800mhz trunked system.

This past week, Milwaukee's "Opensky" digital radio system went off-line for 30 minutes. Opensky is a high-tech, cutting-edge, 14 million dollar wireless communications system purchased by the city of Milwaukee in 2003.

Since its inception, Opensky has been riddled with problems including faulty equipment, radio dead spots, and most recently a complete blackout for 30 minutes. Citizens for Responsible Government, a conservative advocacy group, released reports showing at least 240 incidents where Opensky had failed. And there have been hundreds of internal complains filed by Milwaukee police officers. They system is an exorbitant failure.

I spoke with a Las Vegas Metro PD officer on my last trip there about 2 months ago and he said they were already using the new Open Sky system. They were simulcasting on their old system also. He said The new 900mhz Open Sky system worked great in "Metro" Las Vegas, but has numerous dead spots in the outlying areas. Since LVMPD covers the whole county, he said the metro units were happy with the coverage, especially how well it penetrated into the hotels and casinos. The people that worked the outlying areas were not happy as they had dead spots with their car radios and the portables were worthless in many areas.

I'm just curious how much more they will have to spend to fill in the gaps in the outlying areas. Also, there is no interoperability with Open Sky. They have to have dispatch patch channels to talk to anyone else.

Stephen;

Pima SO is a MultiNet trunker [a variant of LTR].

I haven't heard of any scanner that has that capability natively.
Someone correct me if I'm wrong about this.

As to DPS District 4.
Probably not without a yagi pointed in the general direction of Yuma.
There is a base station on South Mountain, but the antenna pattern is
ESE of there.
And that station doesn't get used much.
Most of the traffic comes out on Telegraph Pass east of Yuma and
Oatman Mountain outside of Gila Bend.

Your best bet is to find someone with an internet live feed that
covers those areas.

Is the Commonwealth of Pennsylvania the state that abandoned their OpenSky system? I'm originally from just outside of Philly, and I know the PA State Police and all the other state agencies were supposed to migrate to that new system.

Hey guys,

I've seen the thread on the Discount Taxi service using GPS computers now - infact, I know the former TLC (whoever bought them) uses them too.

Is there any companies out there that still voice dispatches, or should I get rid of all my Taxi service frequencies?

Same with Security - I'm hearing a lot of Data on Security services as well.

Thanks!

I will second the recommendation for the 396xt. That should do a great job for your needs.

I would also take a serious look at ProScan for your programming and control uses. ProScan duplicates the screen and keyboard functions on the computer screen, works very well for programing the scanner, and it can stream the scanner over the internet if needed.

Makes it nice since you can even stream the scanner to any machine in your home if desired, nice if you have an external antenna and a two computers like a desktop and a wireless laptop. I use it to feed several scanner feeds to radioreference.com here in Chandler.

You can also try it fully functional for 30 days for free. Check it out at www.proscan.org

From: ja moran
Topic: 17286 Message: 17295

I have two scanners in my truck, an AOR-8000 and a Uniden BC396 XT My F-150 has an antenna rack mounted behind the cab that has 4 antennas: 27 Mhz (CB) two 150/450 and a 450/850 Mhz antenna
people often ask me why all the antennas... different antennas work better on different frequencies.

I loaded most of the Phoenix and Tucson frequencies as well as stuff for Cochise county plus the firefighting and aircraft frequencies. During the Monument fire the Cochise county frequencies were very busy as was the fire fighting frequencies used by the USFS. I also heard the border patrol, cochise county and the Highway patrol all coordianting stuff on the same frequency. Often in cochise county you will se more border patrol that sheriff or highway patrol.

17297. RWC questions and information

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-06-29 07:30:56 UTC
From: John Henry
Topic: 17297 Message: 17297

I've got some questions about the RWC.

1) K-deck 16 is displayed as "Guard" in the radios. What is the TG number, or is it a simplex frequency, and if so, what is the frequency?

2) L-deck 16 is "Event 16". What is the TG number?

3) G-deck 16 is a dynamic regrouping talkgroup. What is the TG number?

4) SPTAC1 through SPTAC4 are simplex frequencies. What are the frequencies?

5) There are at least 3 700MHz simplex frequencies known as 700 MHz National 1, 700MHz National 2, and 700MHz National 3. What are the frequencies?

6) Are the Phoenix FD VHF Patch TG's ever used? If so, what Deck are they on, or are they on a Deck?

Info: Peoria PD A-Deck 12, B-Deck 12, and C-Deck 12 are the 700MHz National frequencies. A-Deck 13 is 8AIRS-AZ 866.0125 I-CALL repeater. A-Deck 14 is the old Peoria city services 855.2125 conventional repeater. A-Deck 15 is 855.2125 simplex. B-Deck 14 is the old Peoria city services 855.4625 repeater. B-Deck 15 is 855.4625 simplex. C-Deck 14 is the old Peoria city services 855.7125 repeater. C-Deck 15 is 855.7125 simplex.

Peoria PD D-Deck has a few encrypted talkgroups.

E-Deck is city services, which as of this past April now has 16 talkgroups, not just the 13 listed in radioreference.com, although I don't yet know the 3 new TG's or the new alignment for all of them.

F-Deck is Glendale PD talkgroups for channels 1-16.

G-Deck and H-Deck are the same as Phoenix PD, H-Deck being mostly encrypted.

I-Deck 1 is 8AIRS-AZ simplex. I-Deck 2 is the 8AIRS-AZ repeater. I-Decks 3 through 7 are 8TACs 1 through 5 simplex. I-Decks 8 through 12 are 8TAC's 1 through 5 repeaters. I-Decks 13 through 16 are the SPTAC's 1 through 4 simplex frequencies.

Peoria PD does not have a J-Deck in their radios.

Peoria PD K and L-Decks are the same as Phoenix FD K and L-Decks.

Yes, it is boring usually. I don't listen to them at all, except when your at an event somewhere and want to know whats happening, you listen sometimes.

Taxis are definitely not interesting, and I should remove them, but have them in a group Taxi and Security.

Thanks!

That has to be the most boring thing to listen to....

From: Chris F.
Topic: 17297 Message: 17300

John,

You are asking questions about a radio we have no way of accessing, but knowing since you are a city employee obviously, we don't have access to the radio.

I could help you with some but you seem to have a radio, we *MIGHT* be able to use close-call on Unidens to get TGID's or frequencies if you key-up.

Are you a Police Officer or a City employee? Please send email to me at chrisf8657@... - I would like a ride-along with you - Im in Glendale on the border of Peoria J

K-Deck 16 should be PHX Fire - K16 - a Engine to Dispatch channel - TG # 1606 IS K15, so following the channel numbering, *MAYBE* 1605. Try it. We don't have it in the directories right now.

L-Deck 16 is reverse numbering. Try 1615. We don't have this either.

G-Deck 16 - Unknown. No info - last is G15.

SPTAC's - No info either.

700Mhz - could be the National 700Mhz frequencies - they are

Don't know about number 6. There are national interoperability talkgroups - they are:

866.0125 ICALL/USA-1

866.5125 ITAC1/USA-2

867.0125 ITAC2/USA-3

867.5125 ITAC3/USA-4

868.0125 ITAC4/USA-5

866.0500 ITAC5/USA-6

866.0500 ATAC-1

Best I can offer and I'm sure anyone else can.

We would have to have a PC to Motorola program to see the exact frequencies + talkgroup ID's to know.

Larsen makes some good antannas They have a PHoenix distributor Talley

150, 450 750, 900 are all multiples of each other
of course the higher the frequency the shorter the wavelength and shorter the antenna needs to be.
I am using antennas with NMO mounts One is base loaded(coil in base) and two are center loaded

the stuff with noise is the data or control channels and the digital or trunked systems will have at least one control channel or frequency..

I've noticed that Glendale Az, and the town of Marana, north of Tucson are using the same frequencies but different talk group numbers. Due to the 100 mile distance separation and mountain in between it's unlikely that the systems interfere with each other.

There's more Trunking and digital stuff in Maricopa County than in other places. In Cochise county almost everything I've found is conventional VHF or UHF.

the uniden is a nice radio I also like the AOR-8000, it receives everything with no gaps from the AM radio (500Khz up to about 1.3 G (1,300 mhz) though reception of the lower frequencies is enhanced by using an antenna designed for those frequencies. For regular VHF, UHF, or 800 or 900 mhz either the external antenna on the truck or a vhf/uhf flexibme or "rubber duck" works fine.... a lot depends on the transmit power of wat you are listening to, if they are using a repeater and where the repeater is in relation to where you are

From: Joe S
Topic: 17297 Message: 17304

L16 is TG1630, G16 and K16 do not have a talkgroup or frequency assigned to them. The VHF patches do have talkgroups assigned to them and are allowed on sites, but are not active basically because there is no more room in the equipment to set them up. Think of it like all the PCI slots in a PC are being used already. G and H will be the same throughout the valley, H is all encrypted. K2-K5 are city independent channels so each different FD participant in the RWC will have a different K2-K5. J deck is the aviation deck for Phoenix, I don't think anyone else has them. About the TAC channels I'm not sure off the top of my head what the frequencies are, but they are just normal USATAC frequencies and AIRS is AIRS.

17305. Clone Radio

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-06-30 01:47:32 UTC
From: fetishbob56
Topic: 17305 Message: 17305

I live in Sun City and I just bought a Radio Shack Pro 197 and I was wondering if anybody nearby would be willing to clone my radio.

I am mainly interested in frequencies for Maricopa County Sherriff, Peoria, Glendale, Surprise, Sun City Fire, Sun City Posse and DPS.

I would be very willing to come to your house to get the radio cloned.

Thank you

Bob

17306. Re: RWC questions and information

Topic: 17297 Message: 17306

Thanks for the info. I'm not a city employee, I got the information from a friend and we wanted to get some answers to what we didn't know.

I guess the radio display for G-16 says dynamic regrouping, or whatever the abbreviation is for that. The display for K-16 says "Guard" and is apparantly a simplex frequency.

Glendale FD's K-2 and K-3 TG's (1667 and 1666 respectively), are listed in radioreference.com. Does anyone have the other departments' K-2 through K-5 TG's?

I thought a handfull of the H-deck TG's were clear? H-1 and H-12 through H-15?

John
Peoria

> L16 is TG1630, G16 and K16 do not have a talkgroup or frequency assigned to them. The VHF patches do have talkgroups assigned to them and are allowed on sites, but are not active basically because there is no more room in the equipment to set them up. Think of it like all the PCI slots in a PC are being used already. G and H will be the same throughout the valley, H is all encrypted. K2-K5 are city independent channels so each different FD participant in the RWC will have a different K2-K5. J deck is the aviation deck for Phoenix, I don't think anyone else has them. About the TAC channels I'm not sure off the top of my head what the frequencies are, but they are just normal USATAC frequencies and AIRS is AIRS

As far as I know K16 outside of Phoenix radio's doesn't have anything in it. In Phoenix K16 is fire investigators talkgroup, but it's encrypted. All of H deck is encrypted, not sure why RR says differently, I think some of what they have listed as H is actually M. K4 and K5 for all cities is encrypted.

John;

The frequency you heard all those agencies on was most likely the AIRS
[Arizona Interoperable Radio System].
<http://www.azgita.gov/psic/library/airs/Arizona_AIRS_SOP_10192010.pdf>

I know that the site on Mule Mtn outside Sierra Vista was in heavy use
during the intense part of that fire.

There's an M-deck?

I realize it's encrypted, but what is the TG for K-16? And what are K-4 and K-5 used for? It'd be nice if the K-2 through K-5 TG's were known for all of the department's just for a complete record.

Random thoughts here...

I wish there was an easier way to search a block of TG's other than by programming each TG in as a seperate object, at least in the GRE PSR500 I have.

For example, what is in the block 4000-4027?
4028-4040 are the known Peoria City Service's TG's.
What's in the block 4041-4103?
4104-4141 are the known Peoria Police TG's.
What's in the block 4142-4200?
4201 and 4202 are the 2 known Buckeye Police TG's.
What's in the block 4203-4300?
4301-4307 are the 6 known Surprise Police TG's.
What's in the block 4308-4329?
4330, 4331 and 4332 are the 3 known El Mirage Police TG's.
What's above 4333?

The same thing for 7 seperate blocks of TG's in the 1600 and 1700's where the Phoenix FD TG's are located. A lot of the unknown K2 through K5 TG's for the other departments would probably be found there.

There's hundreds, maybe a few thousand, of unknown TG's there, and the only way to try to find out which ones are active is to program each and every one in individually. There should be a way to search a block of TG's to make the process easier. Maybe that's something for the scanner manufacturers to think about.

Like I said, just some random thoughts. (By the way, with not having a computer, I have to program my computer by hand, making the process all that much harder than someone who could do it with a computer and programming software.)

BuTEL has software for the PSR-500.
It's what I use for all my Uniden scanners.

It'll make your life a ton easier, and, you can read out what you've already put in.

http://www.butel.nl/

Click Software: GRE on the left, then PSR-500. They have a free demo. From what I see, the purchase price is $39.95 or $69.95, depending on which version you choose. Both come with Lifetime updates. That page will show the differences between the two (Std and Pro)

Subject: [ArizonaScanner.com] Clone Radio

I live in Sun City and I just bought a Radio Shack Pro 197 and I was wondering if anybody nearby would be willing to clone my radio.

I am mainly interested in frequencies for Maricopa County Sherriff, Peoria, Glendale, Surprise, Sun City Fire, Sun City Posse and DPS.

I would be very willing to come to your house to get the radio cloned.

Thank you

Bob

PRO 163 Is analog. Its not outdated, just only good in places where thy haven't switched to digital yet. As far as MCSO is concerned, forget it

Or from a Pro 106, the 163 is analog and also does not use object oriented UI.

17332. Scanners with remote head capability?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-07-09 13:12:49 UTC
From: John Henry
Topic: 17332 Message: 17332

I'm curious if there are any base/mobile scanners that have remote head capability? I don't recall any, but I recently ran across a youtube video of a storm chasers truck where he mentions having remote control capability of his partner's scanner, and I don't believe he was talking about using a laptop to control it.

Thanks.

John

(I'm still dreaming of some day having a Chevy Suburban outfitted with multiple radios, including Amatuer, CB, MURS, GMRS, and a scanner or 2, and other electronics.)

17333. RE: [ArizonaScanner.com] Scanners with remote head capability?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-07-09 16:47:10 UTC
From: Dan Danz
Topic: 17332 Message: 17333

The Uniden 396T, 396XT, 996T and 996XT and some others (BCT15/15X, BC346XT, and BR330T) have BC-RH96 remote head capability. I use one to control a 996T in the trunk of my car.

Saw a post earlier this month that ScannerMaster had them for $169 .. http://www.scannermaster.com/Uniden_Bearcat_BC_RH96_Remote_Head_p/10-691108.htm

The only knockoff I have is that the head does not control the DC power to the radio - you have to provide switching for that; in the car that's not a big deal because the radio is fed from the aux ignition-switched power - but if you ever wanted to power the radio down (because of low battery, for example), you'd either have to have a separate switch in the line and have the radio accessible in the trunk.

I won't have a problem; the friend who helped me mount 3 radios and the RH in my car had a brilliant idea: the 996T that is controlled by the RH is mounted to the back of the lockable swingdown passthru hatch from the rear seat to the trunk, and that makes the radio actually "drop down" on top of the back seat center armrest in my Acura TL. Makes it easy to get to for software upgrades, loading, etc.

Yes. The current and recent Uniden series of scanners, including the BCT15, BCT15X, BCD996T and BCD996XT all are capable of use with the Uniden RH-96 Remote Head.

In addition the RH-96 works with the Uniden handheld scanners, including the BC330T, BCD396T, BC346XT and BCD396XT.

The RH-96 is currently only available thru ScannerMaster (www.scannermaster.com).

The RH-96 allows control of all scanner functions. The only thing it won't do is actually power off the scanner, but if you connect the scanner to the ignition switch this won't be a problem.

I have 3 RH-96's in my SUV, the radios are in a the cargo area. I also ran remote speakers to the passenger area. In addition I have a dual bander and 2 Moto 2-way radios in the same set-up. See http://www.n9jig.com/Pilot/ for pics etc.

Hello,

The last I remember having one was the BCD796D. Kinda old now, but it still does APCO-25.

IIRC, someone or someplace is starting to make ones for the newer scanners. I'm sure someone will chime in, if not, I'll research.

Guess I'm out of the times! Just looked.

http://www.scannermaster.com/Uniden_Bearcat_BC_RH96_Remote_Head_p/10-691108.htm

The Uniden BC-RH96 Remote Head lets you fully control your BCD996XT and the older BCD996T, the BCT15X and the older BCT15 base/mobile scanners as well as the BCD396XT, the older BCD396T, the BC346XT and the BR330T portable scanners.

Didn't even know they had this until I searched - should have before I replied - LOL!

On the label on the back is a RS stock number. What is it on the 163 that you
have??

Well then it's not a 163, it's not that difficult to find out it's called Bing,
Google or Yahoo or whatever search engine you like to use

From: Dan Danz
Topic: 17345 Message: 17346

MCSO is the older Motorola II system with a 3600-baud control channel.

Phoenix Police (Regional wireless) is an APCO P25 system with a 9600-baud control channel.

jr

if the radio you have says digital on it. Can you tell us exactly where it says it. Notice the picture from the url you gave us doesnt show the word digital. This was the reason I asked you for the catalog number from the nameplate on the back,

edc

Subject: RE: [ArizonaScanner.com] Trunk setting for BC 796D

MCSO is the older Motorola II system with a 3600-baud control channel.

Phoenix Police (Regional wireless) is an APCO P25 system with a 9600-baud control channel.

Okay ... This has nothing to do with the com port. You need to RTFM !!!

http://www.uniden.com/content/ebiz/uniden/resources/ownersmanual/BC796Dom.pdf, page 41 has the definitions.
.
When you select system type:
MCSO is the second kind: Motorola II.
Phoenix PD is on the RWC system and it is the first type: APCO Project 25.

Programming instructions start on page 45 for either.

17359. Article about the Capitol Police merging with DPS

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-07-21 15:23:33 UTC
From: Jon M. Hanson
Topic: 17359 Message: 17359

This article talks about the Capitol Police merging with DPS. At the very end it does mention the Capitol Police eventually using DPS frequencies but in the meantime they're sticking with 150.995 MHz.

http://www.azcentral.com/community/phoenix/articles/2011/07/21/20110721capitol-police-dps-merger.html

17360. Capitol Police question

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-07-22 13:14:15 UTC
From: John H. Guetherman
Topic: 17360 Message: 17360

The last paragraph in the azcentral.com article mentions that the Capitol PD officers are using portable radios to talk to DPS dispatchers who have better access to records information than their own dispatchers do. (That is a whole 'nother topic right there, but not for this post...) My question is, which DPS channel are they using to do that, or does DPS have a console on 150.995 now?

John
Peoria

17361. Several 453MHz channels: MotoTrbo or NXDN?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-08-01 06:31:32 UTC
From: John H. Guetherman
Topic: 17361 Message: 17361

I'm hearing a few buzzsaw type transmissions in the 453MHz band from my home in Peoria. They are on:

453.100 Unknown. No Maricopa County results in radioreference.com frequency search.
453.125 I believe this was Boswell Hospital security back when there was analog FM voice on this channel, but there's no Maricopa County results in radioreference.com frequency search.
453.375 (PL 165.5Hz) Banner Estrella Hospital Plant in radioreference.com frequency search. (Active as I type this, very long transmission. Long-winded voice transmission, or actual data transmission?)
453.3875 Banner Estrella Hospital Plant in radioreference.com frequency search.

I'm just wondering if anyone can fill in who is on the 2 unknown channels, and/or can confirm MotoTrbo or NXDN?

453.750 (PL 165.5Hz) just came active. Not a strong signal, only 2-3 bars on my PSR-500. Another extended transmission as well. I've not heard this in the past, and have not checked radioreference.com yet.

John
Peoria

Banner facilities for the most part were migrating to TRBO to take advantage of site connect, better audio and 2-TS TDMA. There are some audio samples of TRBO on dvara.org both raw and decoded, you might use that to differentiate. Also 445.8375 is the TRBO Ham repeater in Mesa it's pretty busy in the morning and afternoons if you want to catch a listen for comparison.

If you think that's true, Jon, then you'd better come up with a good explanation of who's answering up on the DOJ interconnect channels that are talkgroups on the RWC and that are used daily for inter agency traffic.

From: Joe S
Topic: 17360 Message: 17370

They most certainly do have RWC access, but general operations are not conducted on the RWC. Maybe some traffic on M4 or COMN1 and 2, but the majority of traffic is on their VHF system.

17371. Re: [ArizonaScanner.com] Re: Capitol Police question

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-08-06 07:05:28 UTC
From: Ed (K9EDK)
Topic: 17360 Message: 17371

There are links for broadcasting ATL info and for mutual aide from practically every agency in the area to the RWC and Mesa's Topaz, but there are no state agencies utilizing either system for routine communications. I would suspect there will be no changes to the Capitol PD system, or, if there is, they will utilize a DPS frequency.

You know it was kind of funny i used to think capitol police was a division of az dps, one time i was inside the capitol and that particular day they were working a crime scene,got to chit chatting with a capd sgt;and i asked him about that,and he clarified that real quick,that they are there own state agency.there have been several occasions where ive heard capitol pd units communicating directly with phx pd central city and southside dispatchers before on there mutual talkgroup.

17377. Mutual Aid

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-08-06 04:49:48 UTC
From: ja moran
Topic: 17360 Message: 17377

Yes in Central Arizona, many agencies participate in one of the digital shared trunked systems. Outside of Maricopa County, ther are other frequencies taht are used for interagency communication. During the Monument fire 460.375 was quite active as was 460.325 (HP/DPS D-9) same frequency is also used in Phoenix. The Cochise Sheriff UHF and VHF frequencies were active too
On the interagency channel, you had the Border patrol, Highway patrol Cochise Sheriff, and possibly some Forest Service activity too...

I have 20 acres near Elfrida and the scanner was quite active during the Monument fire. It wasn't quite so active for the Horseshoe fire as most of that was in uninhabited areas.

I imagine for the Wallow fire there was an interagency channel active that had both Arizona and New Mexico Agencies on the same frequency

I did occasionally hear some airliners or commercial aviation traffic on the Alberquerque center frequency 134.45 or 133.0 talking about the fire too. I am near the Tombstone MOA (Military Operation Area) and frequently see aircraft from Davis Monthan practicing overhead at various altitudes. San Simon is where a VOR beacon is that is on the IFR charts The Cochise beacon (CIE) is between Douglas (DUG) and San Simon (SSO) and is located next to a large dairy east of Kansas Settlement road.
JOHN
flying yourself is more fun and less painful than flying on an airliner

The West Valley Emergency Center opened in Buckeye on August 2nd. The public was invited to tour the facility a couple days before it opened. Buckeye FD, Buckeye Valley Fire, Air Evac 5 and a critical care ambulance was there for display purposes and to meet and greet the public. There was a radio system with the name CarePoint on it with a built in screen to receive an EKG from the field. It was the radio they wpould use to talk to the medics in the field. I was told they could talk to the medics on 8 different channels. What are those 8 frequencies? Are they analog and are they trunked? When I was walking around the facility, a loud two tone sounded from the area the radio was at.

17382. RWC new TGID and questions

New TGID 4023 I believe is the City of Peoria Water Production Department. Unit ID's are frequently "WP" followed by numbers. Addresses/locations heard are in the City of Peoria.

Does anyone know who uses TGID's 1759, 1818, 2191, or 2192? They're not listed on radioreference.com

John
Peoria

4023 as been identified in the past as channel "B5 Peoria Utilities 1", but I guess it got missed in submitting to the website. I will update this and some of the other known Peoria Services talkgroups.

1759 Unknown Use Encrypted
1818 Encrypted - I believe that I have heard this referred to as El Mirage Fire Chanel K04, but this is unconfirmed.
2191 Unknown Use Encrypted
2192 Unknown Use Encrypted

We don't list a lot of the Encrypted channels on Radio Reference as it is not very helpful information for a scanner listener. It is nice to know when a talkgroup becomes active, but it is difficult to identify the use of encrypted talkgroups. All of the encrypted talkgroups you are inquiring about have not been positively identified yet.

Dave,

Could they be the EMCOM (I think that's what it was called) UHF Frequencies. Many, Many years ago we were using them in Navajo County when I worked there.

On Peoria PD radios, city services are on E-deck. I don't know the channelization. I don't know how the city services radio are programmed. There should be 16 TG's. I only know of 14 at this time.

I'm still looking for all of the known K-2 through K-5 and K-16 talkgroups for each FD on the RWC. Encrypted or not. (K-16 on Peoria PD radios is supposedly a simplex frequency, and is labeled as "Guard".)

Most likely it's EMSCOM.

463.000 is MED 1
463.025 is MED 2
463.050 is MED 3
463.075 is MED 4
463.100 is MED 5
463.125 is MED 6
463.150 is MED 7
463.175 is MED 8

Also:
462.950 is MED 9
462.975 is MED 10

I don't know off-hand if they're still 2 frequency simplex, meaning you have to listen to the mobile/portable radios on 468.000 up through 468.175, or if they're repeatered now. There are also several other MED channels available here in AZ. MED 11 through MED 15 are in the 453 MHz band.

The days when you took the time to figure out what you were hearing on your scanner?

I remember the days when the first scanners came out that searched. You would find a frequency and then program it in and listen for days until you figured it out or got a good idea who it was. Now, everyone wants to just get on the internet and ask what's this or what's that. In those days, the only reference was the Police Call book that was published once a year and most information was already a year old at publication.

Part of scanning is finding something unknown and then figuring it out. I remember years ago when I stumbled across some traffic on 450 that after listening for a while turned out to be Phoenix PD's new UHF Detective channels. They were great to listen to and weren't published for several years.

The same can still be done on the APCO-25 systems, it just takes some time.

Try it and just figure it out.

(A suggestion from a guy who started listening to scanners with crystals about 40 years ago.)

I can appreciate what you are saying. Besides the fact my first police radio was a tunable and that when I was in my middle 30's I talked my wife into giving my one of he new Midland 4 ch xtal scanners. But all of yesterday and today I had had the scanner on Apache County S.O. freq. We are still analog up here in the White Mountains. So I am copying traffic that has deputies, a wrecker, ambulance and a lot of manpower including horses going into an area. I finally heard a deputy say where they were and them I see in todays paper (online) that there was a 60 yr old hiker lost up near Mt Baldy. But just listening and trying to figure out what is going on is most of the fun. Which is why I listed to DPS up on 40 during the winter to see what got closed.

Which went away sometime around when the time that people
using email lists decided to top post, in reverse order
of the convention of how every language on planet earth
reads, and include several hundred lines of non-essential
quoted material.

Welcome to the "it's all about me and I want it RIGHT NOW" generation.

First Pub Service receiver - AM broadcast band, listening to
LAPD in the 60s. Later a tunable multi band radio with the 30-50
and 150-170 bands on a VFO which also covered marine band,
FM broadcast, couple of shortwave and AM aircraft.

Ok, 453.100 is still licensed to the City of Phoenix under KOA789, the old PD callsign. Is Phoenix PD still actually using this channel, utilizing Mototrbo as a method of encryption? The next closest licensee is Gila County, however I don't believe I'd be hearing them here in Peoria, especially on just a handheld scanner and a rubber duck antenna.

453.125 (I believe I meant to type 453.175 in my post above in the first place) and 453.175 have 48 licenses to the State of Arizona, and according to the SWFD10 are allocated to MED13 and MED14 respectively. Is the State of Arizona using Mototrbo on EMSCOM now? (453.175 was used by Boswell Hospital security in the past, but are not currently licensed for this frequency. Is it possible that they are operating illegally without a license?)

I had forgotten about 453.750, and have not yet looked it up on the FCC's ULS license search. So I don't know who may be using it.

That isn't so easy anymore, when it comes to a frequency or talkgroup that may only be used once in a blue moon, or which uses a transmission mode, such as Mototrbo, or uses encryption, which cannot be decoded on any current scanner.

Take my previous post. 453.100 is still licensed to Phoenix PD, and is using Mototrbo. Are the police still using it, or is someone else using it unlicensed?

453.175 is also Mototrbo, and is licensed for EMSCOM. Is EMSCOM now using Mototrbo, or is Boswell Hospital Security still using it without a license?

Yes, some other Mototrbo users have been positively identified, such as Banner Estrella Hospitals on 453.3125 and 453.3875. But they're actually properly licensed. You can't aways just listen or look these up and get a definitive answer. So you come here and ask, and *maybe* someone has the answer.

Much of it would be the IDENTIFICATION of the Users and not the USE for now. There are add-on devices that with a computer will DECODE the TRBO and other digital (Not Encrypted) systems

How many folks figured out a DVP/DES user in the old days and shared it , so that when they forgot the enceyption we knew who they were.

Its the hunt, the search, the find and then the IDENTIFY

17404. Re: What ever happened to....

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-08-19 02:02:26 UTC
From: m50steel
Topic: 17393 Message: 17404

I've been listening to scanners for over thirty years and it's never been the hunt that interests me. I like the action especially complex action like working fires, wildland fires, technical rescues, snowstorms, etc. I like listening to all the resources, fire, police, EMS, air support, ADOT, & SRP coming together on the incident. It's not unusual for me to have four scanners both digital and analog running the same incident so I can have each one dedicated to a resource. It's interesting how some incidents are run better than others and how much mis-communication happens even with the best of equipment. Just like amateur radio there can be many interests and it may have nothing to do with age.

Besides the fact my first police radio was a tunable and that when I was in my middle 30's I talked my wife into giving my one of he new Midland 4 ch xtal scanners. But all of yesterday and today I had had the scanner on Apache County S.O. freq. We are still analog up here in the White Mountains. So I am copying traffic that has deputies, a wrecker, ambulance and a lot of manpower including horses going into an area. I finally heard a deputy say where they were and them I see in todays paper (online) that there was a 60 yr old hiker lost up near Mt Baldy. But just listening and trying to figure out what is going on is most of the fun. Which is why I listed to DPS up on 40 during the winter to see what got closed.

I can definatly relate to what you are saying.the simplicity of scanning is long ago gone.and everything about it is so sophisticated now,alot of it either is un -obtainable or too complicated.

17406. MURS - Multi Use Radio Service

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-08-23 05:52:16 UTC
From: John Henry
Topic: 17406 Message: 17406

Does anybody know what happened to the guys I used to hear on MURS channel 1, 151.820, a couple years ago? They were loud and clear across the North and Northwest Valley.

Anybody use MURS for anything? I've got a Dakota Alert HT, myself, but haven't had a reason to use it, other than monitoring.

Morning
John and the group,

While I cant answer to you first question (don't live in the Great State of Maricopa), but as to your second question, MURS is fairly popular here in my area with places like schools, hospitals, gas station complexes, apartment complexes ect. Just about every where a "campus" seems to exist your likely to hear activity on MURS.

That one is alive and well, just listen to any of the VHF ARA repeaters on any given day and you'll hear plenty of truckers that used to be on 11 meters now on 2 meters. At least now they are licensed and adhere to some rules and best practices HIHI.

17410. K-deck 1: TG 1794 or 1795?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-08-23 18:00:01 UTC
From: John Henry
Topic: 17410 Message: 17410

On the RWC, is TG 1794 K-deck 1, or is TG 1795 K-deck 1?

Apparantly, Phoenix FD is having issues with the patch between VHF ch. 1 on 154.190 and what they're repeatedly calling K-deck 1 on TG 1795.

I thought K-deck 1 was TG 1794, and L-deck 1 was TG 1795? Although I've also thought it strange that dispatch was done on L-deck 1 and the Tactical channels were on K-deck.

John

1795 is K1. The first position on every FD deck is 1795.

The VHF patches are not used unless needed, and that's pretty much never.
Those patches were established during the transition period from VHF radios
to RWC radios. The only channel patched is channel 1 (tg 1795/154.19 MHz).

17414. MURS

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-08-23 22:54:36 UTC
From: kb7aqd
Topic: 827 Message: 17414

Listen for WalMart on 154.570 and 154.600.

Wendy's at Metro Center uses 154.570 for the drive-thru window.

Banyantree Apartments near Cactus and I-17 uses 154.570.

And, some school uses 154.600 near Cactus and I-17.

Castles N Coasters at Metro Center has BPR40 two-way VHF radios, and sometimes use the 154.570/154.600 MURS, and also 151.625.

Other than Channel 1 the VHF patches no longer exist in the system.

17416. RE: [ArizonaScanner.com] K-deck 1: TG 1794 or 1795?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-08-24 02:09:18 UTC
From: Dan Danz
Topic: 17410 Message: 17416

Ø the only channel patched is channel 1 (tg 1795/154.19 MHz).

Yeah, and it's the only channel that sounds like !@#%!#$. They must've set a microphone in front of a speaker to get audio that sounds that bad. The VHF version sounds so much better than the digital, which is rare.

Dan Danz (WA5SKM)

Fountain Hills AZ

Subject: Re: [ArizonaScanner.com] K-deck 1: TG 1794 or 1795?

The VHF patches are not used unless needed, and that's pretty much never. Those patches were established during the transition period from VHF radios to RWC radios. The only channel patched is channel 1 (tg 1795/154.19 MHz).

Ed

That one is alive and well, just listen to any of the VHF ARA repeaters on any given day and you'll hear plenty of truckers that used to be on 11 meters now on 2 meters. At least now they are licensed and adhere to some rules and best practices HIHI.

The RWC sounds better in most cases than the VHF Channels? What planet are you from or what crappy radio system have you been listening to? Phoenix's VHF has ALWAYS sounded better.

Want that confirmed? Ask Ed since he talked on them both.

Well unless you are a licensed amateur radio operator you're not going to get on 2 meters. If you just want a place to talk, goto the FCC website and apply for a GMRS license, will cost you 75 bucks but that will give you access to many repeaters including several here in the valley with good coverage. Best of luck.

It would depend upon who you're wanting to talk to.

Yes, CB is still used, not learly to the level it was 25 or 30 years ago by any means, but there is still usefulness in the technology.

(has little to do with scanning - other than most older scanners never went that low in frequency coverage to pick up 27MHz)

Ok, TG 1795 is K-deck 1 and L-deck 1 and every other-deck 1. What, if anything, is TG 1794 assigned to?

I'm also curious as to what geographic boundries the K-deck Tactical channels are assigned to. It sounds like K-9 is the main NW Valley (Peoria through Surprise and Sun City West) tactical, K-6 covers areas of NW and W Phoenix, as well as Glendale, and K-10 and K-11 are both used for 3+1 medicals and mountain rescues in the West Valley.

I think some of the VHF tactical channels have had their boundries adjusted since I last knew them, with the addition of channels 2 and 3.

>

The General Mobile Radio Service is one of the Personal Radio Services, along with the Citizens Band Radio Service (CB Radio), the Multi-Use Radio Service (MURS) and the Family Radio Service (FRS), among others.

Unlike CB, MURS and FRS, the GMRS requires a license, which is a simple matter of filling out a form and submitting the $85 license fee. No test is required. The license is good for 10 years, and covers the licensee and his/her family.

There are 8 channel pairs at:
462.550-467.550
462.575-467.575
462.600-467.600
462.625-467.625
462.650-467.650
462.675-467.675
462.700-467.700
462.725-467.725

Repeater outputs and simplex operation occur on the 462 MHz frequencies, and repeater inputs are on the 467 MHz frequencies. You are allowed up to 50 watts transmitter output power.

The GMRS also has 7 other 'interstital' channels that it shares with the FRS, but is allowed up to 5 watts ERP and detachable antennas, whereas the FRS is only allowed 0.5 watts ERP and cannot have a detachable antenna:

462.5625 aka FRS 1
462.5875 aka FRS 2
462.6125 aka FRS 3
462.6375 aka FRS 4
462.6625 aka FRS 5
462.6875 aka FRS 6
462.7125 aka FRS 7

GMRS-only radios may not operate on FRS channels 8-14. Hybrid FRS/GMRS "bubble pack" radios may operate on all the frequencies. A GMRS license is required to use a hybrid GMRS/FRS radio on any of the GMRS channels, which are typically from channels 15 and up on those radios.

Go to prsg.org for more detailed information on the General Mobile Radio Service and the other Personal Radio Services.

> >

Now, if your only goal is to talk to truckers, you need a CB radio. Every trucker will have a CB in their truck. Not every trucker will have a Ham radio or a GMRS radio or any other 2-way radio installed. So if truckers are who you want to talk to, get a CB radio.

Hi John,

The answer is 20.33 miles with a bearing of 33° E of due S from the intersection to the approximate E-W middle of the antenna cluster. This from Google Map, using the distance between points feature.

Is that really the "bearing" you're reading from google maps?
Who gives bearings in that format? eg in relation to some
compass heading other than north.

Wouldn't "bearing 147" would be
the appropriate way to describe that heading?

SInce I plotted the distance from a point atop So. Mtn. to the intersection of 91st & Peoria Ave's, not the other direction, the actual reported bearing was 327.03°. Since I had no indication that John is a cartographer, and therefore wasn't expecting a formal report, I thought I'd put what I sent him as an answer to his question in non-cartographic terms, for reference & for his benefit. He seemed to have no problem understanding what I wrote. I resent the reply directly to him with a screen clip of the plot in Google Earth showing the point to point line, since I had forgotten that Yahoo groups doesn't accept images.

For John's benefit, since I believe that Google Earth projects distance calculations to a flat plane, so not along the hypotenuse, the distance "as the crow flies", taking elevation difference into account, may be closer to 21 miles.

No, Craig, I don't think "wouldn't ... would be" would be an appropriate way to describe anything, especially at 0400 hours when trying to do a quick favor for someone.

Hi Dennis/Craig and members I have and use on a daily basis a Uniden HomePatrol. Question1 .is there a good proven replacement antenna available that is better than the one that comes with it.

Question2 and a little off topic There are so many smart guys in this local group does anyone know anyone in the Phoenix area that has the ability and smarts to repair shortwave radios? If you do, I have a bunch that need attention. I really can use the help.

Thanks in advance

Would anyone know how I can figure out, or does anyone know, the distance from South Mtn to 91st and Peoria Aves? I want to know how far I am from the tower sites.

What about the other mountain-top sites in and around the Valley?

John
Peoria

Hi Gary,

I have too many scanners already to allow myself to become interested in the HP, but the Radio Shack 800MHz BNC antenna always gets good reports. Antenna choice depends on your primary spectrum on interest. You may find that one of the ham radio gain ducks, especially wide band receive ones, might suit your needs. The guys at HRO can help you with such antennas, and may be able to recommend a local repair tech. Randy, KK_TV, I think, used to do such repairs, but I don't think he does now. I'll forward your repair query to someone off list that may know of a repair tech.

Cheers,

Dennis

I have atechnical question,that only maybe one of you true internal radio geeks might know;I have a Pro-2096 that i carry with me at work;over the last several months on a consistent basis when im traveling on i-10 out west toward california;it tpically starts doing it when i get down near the vicksburg valley mp45 and continous off and on all the way to indio,ca.My scanner sort of locks up and says unknown error.it does it real bad way out west in the desert running along the fringes of 29palms milatary reservation.I have to turn it off and back on or unplug it,back in and in resets momentarily and then locks up again. on a weekly basis i travel back and forth through this area,up and down the I-5 corridor in california,Oregon and washington.Nevada,utah. and a few other areas.none of which i experience this glitch.and i wonder if there is some sort of communications block or blunder out in the desert,or some unknown weather condition, or what. anyone have any ideas or suggestions. Just curious

Even if true and reproducible, no scanner manufacturer would implement such a crack because it would be illegal.

ADP is very low level crypto something on the order of 40bit, DES was cracked in hours during the last Crack-A-Thon where the EFF asked people to come in and take a shot a de-crypting a file and it was done much faster than even they predicted with just a small Beowulf cluster of PCs. I can't find the original article but it was something under 20 hours and that was on 56bit crypto back in 1999! Think about that ... Pentium II's and III's!

That is why today most public safety departments and the FEDs mandate 256bit AES crypto, will it be cracked, maybe but only if you have several hundreds of years based on today's computer power.

Now as for adding into a scanner, not likely not ever, as the other op stated, that would be illegal.

BTW, quick reality check, cracking a file and cracking over the air packets off a radio system are 2 totally different animals, one is a constant that you can keep pounding on, the other is occasional or random.

Topic: 17441 Message: 17442

My guess it would have something to do with the "Yuma Proving Grounds" or perhaps the "Chocolate Mtn Gunnery Range" powerful test radar or other RF test gear? When the DOD turns on it's 400 MHz radar ham radio operators report unusual RF activity on their 70cm band what's described as a "Whooshing" sound that pulsates.

Phoenix Sky Harbor has lots of good monitoringopportunities

you have the VHF (and some UHF) air traffic frequencies, airline company operations frequencies(between 128-132.0 mhz and 460.6-461 or 464.0-465.0, and the airport operations frequencies which were on an Ericsson 800mhz trunked system that is now part of the system Phoenix and other cities use. I believe there is a repeater for the system either on the roof of Terminal 3 or Terminal 4

America West Airlines, US Airways, and Mesa Airlines, (America West Express) use a 800MHZ trunked system and I believe Southwest a trunked system that is about 935mhz

you also have the airport bus frequencies and the supershuttle channels

You might want to do some research before taking the scanner off the ship. Some countries do not allow scanners. Even some cruise liners don't allow them and will confiscate them.

Someone just posted the website I was going to post so I won't post it again.

I could not find Simulcast J in the Radioreference Data Base. Could you post the Control Freqs???

Thanks

17460. For those on this group who live in Eloy / Toltec I found something!

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-10-01 20:31:58 UTC
From: N7DJR
Topic: 17460 Message: 17460

I copied Fire Explorers on an unknown unlisted VHF frequency 158.925-(151.4) Training exercises and stuff and you can totally tell it's an Eloy fire radio they are using by that crazy MDC the use!

158.925 Comes back to WXR391- Pinal County Sheriffs Office "COURT HOUSE SHERIFFS DEPT " in Florance so IDK why Eloy would be on it but they are?

Date: 2011-10-01 21:48:24 UTC
From: Dan Danz
Topic: 17454 Message: 17462

It could be that those "missing" channels are programmed in the field units for simplex "direct" on the repeater output frequency of one of the other channels. This was quite common before trunking systems came along.

possibly the local tower frequency

for Phoenix (www.airnav.com and enter PHX) it's 120.9 or 118.7

If it's closer to any of the other airports, GYR, DVT, SDL, FFZ, IWA, CHD then it could be the tower frequency for that airport

I will take a stab at this one, Try doing a grid search on the FCC search page try .5 miles radius then when you get a few hits that you know are within this place run them and get the location data for a more exact search also try researching the DBA name of the business that owns or manages this place you can get lucky sometime with this too. There is a shopping mall in Mesa that is listed in the FCC records under a DBA name not the Mall name too me forever to find them not knowing this strange company name were the owners or property managers of the mall.

If you need links to the search pages I can help
Dave

back in the old Motorola analog trunking days they would do an over the air dynamic regrouping where they would change all the talk groups around. I am not sure if that is what is going on here maybe they have began to encrypt more of the system too that is also possible? If you search the system talk groups and don't hear the traffic you once heard anymore then chances are they may have moved to a more private area of the system.

17488. Re: Westgate City Center Glendale

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-10-27 18:28:54 UTC
From: kb7aqd
Topic: 17484 Message: 17488

Check the standard VHF/UHF business frequencies in the 151-155 and 461-470 MHz range listed in the back of the SWFD. I have them in all my scanners and ham transceivers with extended coverage. In the UHF range, search between 461.0125 to 464.9875 in 12.5 kHz steps, and also 466.0125 to 469.9875. Check also the 451-455 MHz range in 12.5 kHz steps. In the VHF band, the frequencies don't quite line up with a 15 kHz search, so I just put them in memory channels.

Here are some best bets....

151.625 151.955 154.515 154.540 154.570 154.600 158.400 MHz VHF

464.500 464.550 467.7625 467.8125 467.850 467.875 467.900 467.925 MHz

Even though I counted 27 VHF and 54 UHF business frequencies factory preprogrammed into many business HT's, these above mentioned frequencies have the most users in almost any mall I visit.

Check the FRS/GMRS 462/467 MHz frequencies as well.

Radio Shack might still have some UHF stub antennas to reduce your reception range so that you aren't picking up businesses miles away. I bought a bunch recently at $1.99, compared to the MALDOL version that's over $30!

If you use your scanner in a mall, wear earbuds, use a stub antenna, and keep the scanner on your belt in a pouch so that you don't attract unwanted attention. Once, at Arizona Mills in Tempe, I heard that Haagen-Daas was serving free ice cream for its anniversary, via the mall security frequency...and I was first in line.

Please let us know what you are hearing!

The Westgate City Center is owned by The Ellman Companies. According to the FCC Database, their radio call sign is WQHU997 and they have three frequencies assigned to them:

464.7125 - Base/Mobile
462.2875 - Mobile
462.3875 - Mobile

Thanks to all for the recent help. I have a few new requests that are not listed anywhere that I can find in any publications.

Goldfield Ghost Town in Apache Junction would be fun to monitor and Rawhide in Chandler. During the gun fight shows at Rawhide they use wireless mics for the audio feed. Any ideas what the wireless mic freqs could be. Years ago I used to monitor the saloon show at Knotts Berry farm in So. california and that was fun. Now with all the new equipment used in some of these shows its more difficult to monitor. Thx again...

Wireless microphones are pretty low power so you'd would definitely have to be on the property they're being used on in order to hear them. I originally thought wireless microphones were constrained to a pretty narrow set of frequencies but that doesn't seem to be the case. It looks like wherever they can find some "white space" they can use it. This website has some good information: http://www.freqofnature.com/index.php?m=Common&p=Wireless%20Microphones. It lists the UHF television channels as being available (407 MHz to 806 MHz) but since public safety is now allocated the 700 MHz range they would have to stay away from that.

An easy way to find out what frequency someone is using is a scanner that has that capability. Both Uniden's and Radio Shack's/GRE's have models that have a mode (Uniden calls it Close Call) that will identify a frequency someone is using if you're close enough and they're transmitting. If you're finding yourself wondering what frequency someone is using a lot then it might be a good investment.

Wireless mic freqs are very widely available check the websites for freqs for the main brands, Telex, Sony, Shure, Audio Technica and Samson - the vendors usually list their freqs on their sites, if not Google can be your friend here. BTW some have moved from analog and gone digital, in those cases you maybe out of luck.

If you have a good scanner with a proximity mode, you can usually snag freqs in a few minutes, my PSR500 does a great job with this mode.

Best of luck and happy hunting!

From: mountainrydr
Topic: 17493 Message: 17493

Any tips on monitoring this?

Largest Statewide Exercise to Test Arizona's Ability to Respond to Simulated Catastrophic Events

(Posted Oct. 25, 2011, at 4:54 p.m.) The 2011 Arizona Statewide Vigilant Guard exercise is being called the largest emergency response exercise to simulated catastrophic events in Arizona's history. Rightfully so.

Approximately 250 agencies and 8,000 participants (e.g., planners, players, controllers, evaluators, etc.) are involved in 2011 Statewide Vigilant Guard, an operations-based exercise designed to enhance the disaster preparedness of Arizona's emergency management agencies, local authorities, National Guard forces (from Arizona, California, Colorado, Utah, Nevada, and Minnesota), and U.S. Northern Command. The exercise will run Thursday through Sunday, Nov. 3 to 6, 2011, and involve simulated on-scene responses in several locations throughout Maricopa County.

From: ja moran
Topic: 17493 Message: 17494

there are several interagency frequencies one being 460.375 which was quite active over the weekend for a bicycle race.
this frequency was also active during the Monument fire (Sierra Vista area) and the Horseshoe fire (Eastern Cochise county)

I heard the border patrol, highway patrol, county sheriff, and also the SVPD on the same frequency

the border patrol also will come up on the highway patrol frequency (460.325) which is for District 9 Cochise and Graham counties in SE AZ
the 460.325 is also used in the Phoenix area (Dist 5 and Dist 13) but uses a different set of repeaters. The Phoenix D5 and D13 radio traffic is different from the D9 traffic in southeastern Arizona

460.025, 460.20, 460.325, 460.425, 460.40, 460.475, 460.50 you can monitor these on I-10 and kep up to date on what is going on

JOHN

On 3977.7 LSB, one of the hams mentioned these a few nights ago:
3977.7/3990.0 LSB and 5371.5 USB

In the past, I have heard activity on intersystem frequencies:
154.280 155.475 460.375 866.0125 MHz

Red Cross: 47.420 MHz

Airband: 122.700-123.575 MHz in 25 kHz steps for UNICOM, and also 136-137 MHz AM

From: John
Topic: 17493 Message: 17499

Coming back from Tucson today heard the DEMA network active with Coyote flights doing simulated airevacs to Phoenix area hospitals.

Raven TNO, Raven Safety, Raven TAP, and Coyote flights. Mention of passengers including K-9s, "immediate" medical patients, transporting personnel to Papago, etc. Sounded like a mass casualty drill. Around 1100 broke off due to an "actual" medical incident; intent was to restart at 1200...

Saw a few Blackhawks maneuvering off I-10 near Chandler, and a few flying near downtown.

Maybe related....

It looks like the State is running their mobile trunked system for this exercise. I head this system active with testing a few weeks ago, but I did not have a chance to run Pro96Com on it. Here is what I have found today:

System ID: 3F1
Site ID: 301 (Single site, no neighbors)
WACN: BEE00
System Frequencies:
769.14375 Control
769.64375 Alt Control
770.14375 Alt Control
770.64375 Alt Control
774.10625 Voice
774.60625 Voice

Last time the system was active (about 3 weeks ago), I logged this talkgroup:
2573 Unknown Testing, unencrypted

I have not logged any talkgroup activity today, but I will keep Pro96Com Running to see what I catch.
As I understand, this system is a mobile trunked system that is licensed to the state on 700mhz mutual aid frequencies. I not sure where it is located for this exercise. I am receiving the control channel at about 2 bars of signal from about 32nd Street and Baseline in Phoenix.

17503. AZ DPS PL Codes

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-11-09 21:30:09 UTC
From: bedforddawg1272
Topic: 17503 Message: 17503

Is DPS on PL codes or DCS? I was just wondering if the signal is clearer if using DCS?
Any ideas? All I have is the PL 100.0 and 151.4 is there a conversion?
Thanks Guys!

17504. Re: [ArizonaScanner.com] AZ DPS PL Codes

From: n7qyk@cox.net
Topic: 17503 Message: 17504

DPL is a digital signal and PL is a sub-audible tone and are not interchangeable. Use the PL Tones you have and you should be fine. There really isn't that much difference in performance between PL & DPL in a scanner so it would have little effect on a signal sounding cleaner with one over the other.

From: N7DJR
Topic: 17505 Message: 17505

Along the Phoenix Sub you can hear them on 160.785

As it approaches the "Y" at Picacho they will switch to the Gila Sub 160.320

The UP Police Agents following the train (6 Ford Explorers) some marked some not can be heard on 161.550 coordinating their coverage as the train makes stops

They were talking to each other on board the train using the two road frequencies Phx Sub & Gila Sub 160.785 & 160.320

Fire Radio Operations

Regional Wireless Cooperative Member Daisy Mountain Fire District received a request to provide Fire service to the Town of Carefree. Radio coverage testing on the VHF and 800 MHz systems inside the Town of Carefree will be conducted next week. Due to the town's terrain, radio operations in Carefree would be similar to Daisy Mountain's current response areas where VHF channels are used when experiencing mountain interference on 800 MHz.

GMRS, FRS and VHF/UHF Business channels are routine.
Also VHF Air Band... all depends on what they decide to use.

Unless it's a Big Show [Launch] with many Take-Off/Landings you will usually only hear
them as they land or take-off

I don't know what you're referring to. Goodyear FD has been a part of the RWC for years. Some of the channels utilized primarily for FD can also be used by PD agencies on the RWC. Last week, with PIR running, there was a lot of cross communications.

Ed

I asked a pilot and he pulled a cell phone out of his pocket and said when I am ready for the chase van I call them. However I did see a VHF looking antenna on the van but didn't see a mobile radio or an HT on anyone and they were supper busy trying to deflate the balloon and get out of there so I didn't push the issue with him but he said no radios. Try running some owners by the FCC database using obvious names first then do a little digging to find the "DBA" name and you might find a few that way.

We have some local Hot Air Balloon activity out here in the desert with the local airport dominated by sky diving activity "Sky Dive Arizona" they have their hot air balloon they fly around here I have yet to hear anything from that balloon either.

Cut & Paste from FON

123.300 Aviation instruction, Glider, Hot Air Balloon
123.500 Aviation instruction, Glider, Hot Air Balloon
122.750 Air-to-air communications & private airports
122.850 Air-to-air communications & private airports
123.025 Air-to-air communications (general aviation helicopters).

Dave,

There are soo more possibilities in actuality. The person who's fly's from the jump school there in Eloy I believe most commonly uses business/airport aviation Comms due to his interaction with jumpers and aircraft, and the facility it self. Most of the pilots I associate with on a regular basis have used the tone'd FRS channels, business, CB, some do also use HAM on occasion if crew has a license as well.

17520. MCSO Officer involve shooting

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-12-18 14:31:53 UTC
From: Ranger
Topic: 17520 Message: 17520

A MCSO officer was involve with a shooting of a suspect last night in the area of I17 and Dunlap. The suspect was killed and the officer had non threating injurys. My scanner was taken off of Radio Reference because I had mention to someone who was looking for DEA frequencies that said they never hear anything with the DEA, I told them that every now and them I listen to the DEA when the scanner is not streamimg. Well the gods who run RR who have no background in Fire, Police or EMS decided to take my feed off the air so I don't stream DEA because I had streamed them in the past. I am working on getting shoutcast up just haveing some issues with shoutcast.

No, RadioReference.com is NOT acting a Big Brother. Read Tom's posts here http://forums.radioreference.com/arizona-radio-discussion-forum/225922-dea-silent-400mhz.html and decide for yourself. Tom clearly stated that he was streaming DEA channels as part of his feed on RadioReference.com. That is in direct violation of their service agreement for feed providers and the owners of the site pulled his feed from THEIR server because of that violation.

Was that playing Big Brother? I think not. I think it was RadioReference.com enforcing the standards set in their service agreement. I think that the site owner may have overreacted a bit and that they could have warned him about the violation before pulling the plug. But I also do not know of any email communications that they may have had off the site wither.

I have found that RadioReference.com's owners are reasonable people, as I have several feeds there myself. I appreciate the service that they provide and I plan to continue feeding there. And I will continue to follow THEIR rules, and adjust MY feeds accordingly if and when they change.

Topic: 17520 Message: 17525

RR does take things to far and here is why!
To the DEA feeds that was reference to a reply to someone's question. My feed was not even on for 24 hours because the pc that I use to stream was in work with me. There was no live scanner feed. The information that Lindsey sent to me was this and I am copying and pasteing the info! http://forums.radioreference.com/arizona-radio-discussion-forum/225922-dea-silent-400mhz.html RR does not follow their own policies! They updated their rules when there was a question on tac channels. Their policy that I signed 2 yrs ago says their will be no tac channels streamed across the air, when one of the subscribers complained about what a tac channel was RR changed their policy's. I was a member since 2007 they could have said something before pulling the plug. Just so you know keep in mind for those who stream EMS to Hospital HIPPA Laws you can not stream this which RR does not follow!!
Also RR violated their policy because here is was what they wrote for us as feed providers:

Feed providers agree to ONLY broadcast routine dispatch and special events channels and talkgroups for law enforcement agencies.
I agree to NOT broadcast dedicated tactical, car-to-car, SWAT, narcotics, detectives or any other channels or talk groups that are not routine dispatch or special events related.

The DEA channel's I stream are NOT tac channels, are not car to car channels, they are routine dispatch channels. http://www.radioreference.com/apps/db/?aid=824
I was streaming Phoex channel 1 and channel 6, These are Operation channels not tac channels which you can see! These are routine channels. If the RR team had a background in Fire, Police, or EMS they would know what an operation channel is but none of RR team has any background in this field. Per their policy I agree to NOT broadcast dedicated tactical channels, I can count over 50 feeds that use the word Tac in the name of their feed!! When I was in Colorado My internet was shut down because the FCC sent a letter to the cable company with a complaint from a police department asking me to not stream their department. Lindsay said o they can not do that, But they did and if I kept streaming this police department I would have been fined. But RR does not tell you this. Yes RR can not get in trouble for streaming information that You are sending to their server, but you can!! So be safe out their. Once I find out how to set up shout cast I will be back online. It has been very busy in the last few weeks.

Subject: Re: [ArizonaScanner.com] Re: MCSO Officer involve shooting

No, RadioReference.com is NOT acting a Big Brother. Read Tom's posts here http://forums.radioreference.com/arizona-radio-discussion-forum/225922-dea-silent-400mhz.html and decide for yourself. Tom clearly stated that he was streaming DEA channels as part of his feed on RadioReference.com. That is in direct violation of their service agreement for feed providers and the owners of the site pulled his feed from THEIR server because of that violation.

Was that playing Big Brother? I think not. I think it was RadioReference.com enforcing the standards set in their service agreement. I think that the site owner may have overreacted a bit and that they could have warned him about the violation before pulling the plug. But I also do not know of any email communications that they may have had off the site wither.

I have found that RadioReference.com's owners are reasonable people, as I have several feeds there myself. I appreciate the service that they provide and I plan to continue feeding there. And I will continue to follow THEIR rules, and adjust MY feeds accordingly if and when they change.

My scanner was taken off of Radio Reference because I had mention to someone who was looking for DEA frequencies that said they never hear anything with the DEA, I told them that every now and them I listen to the DEA when the scanner is not streamimg. Well the gods who run RR who have no background in Fire, Police or EMS decided to take my feed off the air so I don't stream DEA because I had streamed them in the past. I am working on getting shoutcast up just haveing some issues with shoutcast.

You WERE in violation of their terms of service by admitting that YOU fed DEA channels to your feed. Lindsay has always sent out emails to feed providers when the Terms of Service have been changed. You are free to setup your own server if that is what you wish, but remember that setting up a `server' could violate your terms of service with your internet probider. It can be splitting hairs but understand that feeding one stream to a source that in turns serves it out to others takes WAY less bandwidth than SERVING numerous users from your own server, and that is what can violate your service providers terms.

Also note that you WERE in total violation of the RadioReference.com feed providers Terms of Service:

Federal / Military Feeds
Feed providers agree to not broadcast dedicated Federal Government communications, except where the communications related to fire fighting, EMS operations, space shuttle launch or ISS communications, and park ranger operations, subject to the terms of service in the other related categories.

The DEA (Drug Enforcement Administration) IS a federal law enforcement agency and feeding it on the Radio Reference servers does violate their terms of service. You or I may not agree with them, but that is still their server and they can do what they want with it.

Let it die !

You didn't just get caught, you openly admitted your were proving a feed for a Federal Law Enforcement Agency.

PS - HIPAA [Correct spelling] doesn't affect the Police/Fire/EMS Disp or the Amb-Hosp channels, otherwise they would have all gone encrypted long ago.

From: Jack Sprat 41
Topic: 17530 Message: 17530

Lately when listening to Phx PD some channels are starting to sound bad. Most of the time it comes in OK at first, then it starts to sound like the dispatcher is under water kind of. I do also notice the signal strength goes down when the alpha tags switch. Maybe it's a coincidence but maybe not. Anyone else experience this type of problem? I bought a pro 96 a couple years back and it had the same problem but on all the channels. Any help greatly appreciated.

17538. PCSO Helicopter ID

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-01-01 22:47:38 UTC
From: sh9730
Topic: 17538 Message: 17538

My other post was never approved/posted, so I couldnt just edit it...moderator feel free to combine if you like.

SO, today I heard the helicopter on PCSO channel 5 today responding to a search and rescue incident. The correct radio ID is "RAVEN 1". Not sure how they came up with RAVEN, but at least now its not confusing with RANGER as my previous post.

And this call today confirms they are operational at some level now.

Thanks!

Just so this post makes a little more sense, I had posted how I had heard the PCSO helo doing radio checks on CGPD freqs and THOUGHT I heard their ID as "RANGER" which was confusing to me since I didnt think they had a Bell Jet Ranger helicopter, and that it would be confusing with DPS.

I can tell for sure today they are in an MD500 helo (easy sound to detect on radio), which is what I thought they had purchased.

Also, the original post had said my understanding is this tool will be seeing very limitied use initially (mostly S & R missions like today and drug interdiction in the Vekol Valley area), and not too much "general patrol", although Im sure if they happened to be in the area of a call that comes out, they could respond.

But they only plan on flying approx 15 hours a week or so from what I ve read....so they would really need to find themselves in the right place at the right time to be a big patrol asset for now.

Thanks for allowing the update. Not sure what happened to my original post?

Could Raven-1 have been the Robinson R44 that is often used by the MCSO Posse? The DPS Helicopter is a Bell "Ranger", so the helicopter you heard could be a Robinson R44 "Raven". Robinson makes a Law Enforcement version of the R44 Raven helicopter. I know PCSO wanted a MD500 turbine ship, but have they even taken delivery of it yet?

Well, I suppose anything is possible....but I ve heard a lot of MD500s on the air over the years and this sure sounds like one...plus the fact that there has been a lot of radio traffic on PINAL county frequencies (CGPD and PCSO) from this helicopter over the last few days....and when they were radio checking with CGPD I could hear a 500 in my area (I live in CG) although I never did get visual of it....

I do agree I havent seen any press releases that PCSO has rec'd the delivery of their unit yet, but given the board of supervisors were not HUGE fans of the acquisition at all (due to budget constraints)...they may have just decided to be low key about it?

Hopefully someone here will know for sure.....they are still flying right now on those missing kids call in Maricopa.....this one sounds like it will have a sad ending...

17542. Pinal County Sheriff Helicopter Identifier...

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2011-12-31 05:32:13 UTC
From: sh9730
Topic: 17542 Message: 17542

So, today I heard the new Pinal County SO helicopter doing radio checks on CGPD freq...

Anyway, I wasnt expecting it on the CGPD freq and Im not sure I heard the ID correctly - I thought I heard "PCSO RANGER", but Im not sure that is correct for two reasons:

#1 - I thought PCSO was buying a MD500 helicopter, not a BELL Jet Ranger?

#2 - Even if they did end up with a Jet Ranger, wont it still be confusing to have both DPS and PCSO helicopters ID as Ranger?

Actually I ve always thought it kindof confusing for all the DPS helicopters to all be identified as "Phoenix Ranger" or "Tucson Ranger"....why not RANGER 1 and RANGER 3 etc...like most agencies. Guess that is my California background showing...

Im actually really glad that PCSO is getting this helicopter in the air, but unfortunately due to budget constraints its only expected to by flying 15 hours a week and not for much general patrol function. Its primary mission will (as I understand it) will be used out in the Vekol valley along I 8 for the drug and human smuggling problem as well as for search and rescue. Although Im sure if something happens in the general LE realm and they happen to be up in the air they can respond.

But does anyone else know for sure what their radio ID will be?

You think "Ranger 1" and "Ranger 3" would be LESS
confusing than "Phoenix Ranger" and "Tucson Ranger"?

Well, clearly its not a BIG deal - just a personal preference thing more than anything else...just what Im used to...actually I d be fine with "air 1" etc. like LAPD and LASO does....but given the high amount of interagency use helicopters do nowadays I get that it actually makes the radio ID LONGER when they have to go on Mesa PD air and say MCSO Air 1, etc.....

Like I say, that part of my post is just a little personal quirk...its no biggie....I was really going to be confused if the PCSO helicopter was ALSO, going to be RANGER also...which (so far at least) appears NOT to be the case..

Im actually not that big of a fan of "plain talk" either, even though I completely understand the reasons why there is a push towards it....but that is an entire different post! LOL

Well dps went to tucson ranger and phoenix ranger as opposed to the numbered ones just to eliminate the confusion about which air unit was responding. If you're at a scene in Wickenberg, hearing that Kingman Ranger is responding sets proper expectations, and you don't have to remember, for example, where Ranger 42 was stationed (Fire Station 42 in Phoenix).

And then there's the excellent scheme that Phx PD uses. Air-nn where nn is the hour they go 10-7 on their own frequencies and Firebird-n on other channels, including aviation freqs. Mesa does similar...Air-n on their channels, Mesa Air-n on others and Falcon-n on aviation.

The use of agency prefix on other agency channels is MANDATORY for the first few transmissions, and applies to vehicles and portables as well. Just listen to the DUI task forces, or a multi-agency pursuit. It would be very confusing for dispatchers if they didn't do it.

Some times you scanner folks need reminding that callsigns and radio policies aren't established for your eavesdropping enjoyment. :-)

Dan,

Thanks for the info. Totally agree that it is important for another agency unit to ID with agency (be it air or ground) on another air...interestingly Orange County CA has a pretty good system for this, as each agency has a two digit prefix, i.e. the 18xxx units are OC Sheriff, and the 23xxx units are a different PD....that way when they work off of a single channel (they have a great mutual aid communications system in OC) any dispatcher immediately knows which agency is talking...then the base station is that number - i.e. "station 18".

But, Im basing my comments on my personal experience of more than 20 years in LE, both in communications and the field, not just "listening pleasure". Again, so much of this is just what you are used to....since moving over here I still am not used to the "8 codes" and "9 codes" (i.e. 962 etc..) instead of the 10 and 11 codes.

In the end, everyone seems to get where they need to go...no matter the little differences!

Still havent actually seemed to have gotten a firm answer on my original post though about PCSO helicopter ID.....I guess time will tell...

A 962 isn't a 9-code like the 10-codes you're thinking of (I think California even has 11-codes too). Those are just incident codes. In this case a 962 is a car accident. The Southwest Frequency Directory has them for most agencies and a lot of them are common between agencies. If you listen to the context of the dispatch it isn't too hard to figure out what the incident code means.

Jon,

Sorry if I wasnt clear - I UNDERSTAND the 8 and 9 codes vs. the 10 and 11 codes (i.e. 962 = 1182 - non injury accident), and yes I ve been here long enough to have figured them out...what I was saying is given all the years I listened to the others at work...Im not USED to hearing them! LOL

Believe me, even in CA there are many many variations from agency to agency, hence the push to "plain talk" a few years ago...that sort of went by the wayside though..which as I said before is ok with me...

As funny as it sounds, I laugh when I hear a few incident codes here in AZ like 211 and 459...those are codes based upon the CALIFORNIA penal code (211 PC is robbery and 459 PC is burglary), and I know those dont corespond to the same ARS codes here....but I think those are APCO codes that somehow have stuck here and elsewhere....

Again, please dont think Im adamantly saying one is better than the other!! Just talkin...

17550. Aural Brevity Codes

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-01-03 16:46:42 UTC
From: Ed Ryan
Topic: 17550 Message: 17550

The 900-series of codes used in CA (and somewhat in AZ) were first developed by the CA Sheriffs' and Police Chiefs' associations in the 1940's. There are several versions. Then came the 10- and 11-codes. The" national standard" was the APCO set of Aural Brevity Codes. NIIMS/ICS has mandated, for the sake of interoperability, that plain language supplant the various plans of radio codes.

OK, hopefully my original question is now all confirmed...

Just heard "RAVEN 1" on CGPD air again and two things confirm to me this IS the PCSO helicopter. First, they were at the CGPD airport picking up an ID tech to do some photos (most likely related to the PCSO shooting incident in town here over New Years), which seems like a PCSO function...

AND

While this was happening a PCSO unit came up on the CGPD air asking if the "county helo RAVEN 1" was on the air. RAVEN 1 answered and they had some discussion about a call pending (drug and weapons found) as soon as they could clear.

SO, Im pretty sure this is in fact a PCSO helicopter now in service, and the ID is RAVEN 1. Still not 100% sure its an MD500, but Im pretty sure.

Thanks for all the input....hope this helps others monitoring.

Sorry - one more - I just SAW the helicopter as it returned to CG Airport....it is in fact an MD500 (or VERY similar) and it LOOKS like its blue in color, though I cant confirm that for sure...

SO, now Im officially done with this! LOL

If you can get an actual tail number we can look it up and get a model number that way. Maybe also if they use the 'N' Number on the tower frequency at the airport too.

Just FYI last night around 1-2 am PCSO called for L3 (Lieutenant?) to get Raven up and help out around Stanfield to help search for 2-3 subjects that ran from a stolen county pickup after the pickup broke down after hitting a big pothole during a chase. They got it up about 30 minutes later and it was up until Border Patrol brought in Omaha from Tucson with FLIR to take over the search. 845 (badge #?) was to bring night vision goggles per the discussion from one of the Charlie 30 units who would identify himself via a 18?? when talking to L3 and as a Charlie 30 unit in talking to 900 (PCSO dispatch). They got it up about 30 minutes later and it was up until Border Patrol brought in Omaha from Tucson with FLIR to take over the search BP was called into assist because they had a K-9 and officers in the area. They did catch a 101 who had fallen in a small canal and was soaked but helped out of the canal by her accomplices. The dog tracked for awhile and then lost the other 1-2 and Omaha had barely gotten to the scene when they canceled the search. I live in Pinal county so monitor them all the time, They are just calling it Raven not Raven 1.

I heard that perimeter as well and I would swear that I heard the helicopter ID as "Raven 1" on the Car to Car channel that PinalSO was using.

Topic: 17542 Message: 17556

Roy and Bill,

Thanks! At least now there has been some independent confirmation other than me that it DOES exist and is called RAVEN. I too have now heard this unit several times and have always heard it as RAVEN 1, although it wouldnt surprise me at all if on PCSO channel 1 it gets shortened..(I dont monitor PCSO 1 very often - too much traffic that doesnt relate to me!).

As for getting a tail number - it was too far away for me to do so...and I dont monitor aircraft freqs either.

Not sure whether this gets too far out of field of this forum, but getting a callout, lift off, and onscene in Stanfield in 30 mins or so is really fast! Wonder where this thing is based? Pilot/observer may have just been hanging out at the hangar in this instance so it was quick...otherwise they would have to come in from home...who knows where they live in relationship to whichever airport...

Personally, I think its awesome to have this tool available directly now. Yes, they are expensive, but to those that think its a luxury, I disagree. To me air support is really VITAL in many situations...this again comes from many years of having pretty constand air support available to me, both in communications and out in the field.

But again, my original and followup posts were not meant to start political discussion. Was just trying to confirm the existence and ID number, which we have now done.

Thanks again.

I have aso heard RAVEN ## flights on the DEMA radio net, along with the usual COYOTE and FOX flights. I wonder if they are related?

Coyote and Fox flights give position repots all over the state, while Raven traffic was usually in the southern part of the state...so it might fit

Subject: [ArizonaScanner.com] Aural Brevity Codes

The 900-series of codes used in CA (and somewhat in AZ) were first developed by the CA Sheriffs' and Police Chiefs' associations in the 1940's. There are several versions. Then came the 10- and 11-codes. The" national standard" was the APCO set of Aural Brevity Codes. NIIMS/ICS has mandated, for the sake of interoperability, that plain language supplant the various plans of radio codes.

17559. Strange Sighting....(At least for me)

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-01-04 02:10:35 UTC
From: Rich Gaun
Topic: 17559 Message: 17559

Tonight I saw something new @ N 107th & W Olive (at least I think so), an all white Ford Bronco type vehicle with the standard Blur/Red Light Bar and working on the side "Federal Protection Service" on the door and "Homeland Security" on the front fenders. I didn't get a look at the license plate. Is this a new federal agency under Homeland Security???? Any ideas and what radio system are they on???

Thanks for any ideas!

Rich Gaun
Sun City

FPS has existed since the early 1970s. They are primarily the federal government's building security guard. They used to be under the U.S. General Services Administration but were moved to DHS when DHS was created last decade.

John,
        Could you please elaborate on what the DEMA Radio Net is and the corresponding frequency(s)?

        Thank you!

        John N7LQR
        Maricopa, AZ

I have aso heard RAVEN ## flights on the DEMA radio net, along with the usual COYOTE and FOX flights. I wonder if they are related?

Coyote and Fox flights give position repots all over the state, while Raven traffic was usually in the southern part of the state...so it might fit

From: fireboss352
Topic: 17528 Message: 17562

The assignments were updated again after the holiday break. Rural Metro was corrected, as well as Queek Creek and Evergreen were added.

Thanks for the info everyone! I have never saw a patrol unit of theirs. Of course spending the last 25 years in rural VT I guess they would not be around much....LOL

They guard federal courthouses and other fed govt. buildings, listen in P25 mode between 384 to 420 MHz, and more specifically closer to 406 to 410MHz is where you could hear them, they are usually running clear P25, non secure, so listening is easy and amusing at times.

17565. Narrowband conversion

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-01-12 19:04:52 UTC
From: trunkh8er
Topic: 17565 Message: 17565

We are one year away from all public safety agences in the VHF Hi and UHF bands having to convert to 12.5 MHz voice spacing from 25 MHz. (A move to 6.25 MHz is still to come, but the FCC says it will take its time.)

Are there are any agencies in Arizona that have not yet made the conversion to 12.5? Does it look as though some may try to get a waiver on the deadline?

17566. [ArizonaScanner.com] Re: Pinal County Sheriff Helicopter Identifier...

Just as a final follow up on this one - it is now 100% confirmed that this is a PCSO helicopter, it's radio ID is RAVEN 1, and it is an MD 500 version, white over blue and has Pinal Count Sheriff markings. I have a picture of it now....If I knew how to post here I would.

Thanks again all. Matter of fact they are up assisting with a foot bail in Casa Grande right now.

the confusion about which air unit was responding. If you're at a scene in Wickenberg, hearing that Kingman Ranger is responding sets proper expectations, and you don't have to remember, for example, where Ranger 42 was stationed (Fire Station 42 in Phoenix).

17568. [ArizonaScanner.com] Re: Pinal County Sheriff Helicopter Identifier...

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-01-13 05:49:45 UTC
From: ICP963
Topic: 17542 Message: 17568

With the tail number of N34CT displayed Raven 1 looks to be a 1990 model McDonnell Douglas MD 500E (369E). Previously it was registered out of a company in Sonora Texas with a restricted Airworthiness Certificate for aerial Surveying.

I wonder how much money PCSO spent, or will be spending, to equip it for law enforcement. Robinson's R-44 Raven piston helicopter comes in a law enforcement variant that is fully equipped with FLIR for about what PCSO paid for a 22 year old turbine helicopter that needs to be outfitted for the role.

17569. AirEvac frequencies?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-01-19 17:20:24 UTC
From: srgtch2004
Topic: 17569 Message: 17569

I have loaded frequencies from several sources (RR, Southwest directory, online, etc.) for AirEvac and Native Air. I get a lot of traffic for Native Air, but really none for AirEvac. Wondering if anyone might have up-to-date frequencies for AirEvac or if they know of active channels or what frequencies they use most?

17570. Re: [ArizonaScanner.com] AirEvac frequencies?

Yahoo group: ArizonaScanner (2007 — 2012)

From: ja moran
Topic: 17569 Message: 17570

Air Evac was using a 155 mhz frequency for their operations and would coordinate with the managing agency on their frequency
often 154.28 the interagency fire channel or the local pd or sheriff frequency

In southern Arizona you often hear the helicopters on the medcom (463mhz) frequencies

of course in southern Arizona you also have Border Patrol Aircraft. who do some search and rescue as well a DPS Ranger

Northern Cochise Hospital in Willcox often has a helicopter at their pad by the hospital. The repeater coverage there is generally pretty good for DPS as well as EMSCOM and the Sheriff and police. you can hear them over a wide area.

Subject: [ArizonaScanner.com] AirEvac frequencies?

I have loaded frequencies from several sources (RR, Southwest directory, online, etc.) for AirEvac and Native Air. I get a lot of traffic for Native Air, but really none for AirEvac. Wondering if anyone might have up-to-date frequencies for AirEvac or if they know of active channels or what frequencies they use most?

They used to be on 155.325 in central and northern AZ and I don't get to southern AZ much anymore so they may have moved off of this frequency.

In Casa Grande they are on 157.5375 and almost always on 154.280 to coordinate with ground control LZ's

http://www.radioreference.com/apps/db/?aid=2439
Toward the bottom of the page, you will see PHI, Inc ☐ New Updates. These are the freqs/tones that are currently in use.

In Phoenix, Air Evac is active on:
Ch. 1 155.325 156 DPL
Ch. 2 153.530 156 DPL

I have heard several transmissions on these frequencies this morning. I'm not sure how active these freqs are in the rest of the state.

Thanks, Dave for the Air Evac frequency used in Casa Grande. I am wondering, however, what frequencies Native Air uses here in Pinal County. Any frequencies you know of would be most appreciated! Thank you.

Also don't forget the Air to Air helicopter frequency 123.025 I hear medical, news media, DPS ranger, customs border patrol, PCSO raven, private helicopters all day long. As far as Native Air I don't see them out here very much Air Evac sits at the local hospital and airport here so they pretty much dominate this region out here in the desert.

So rumor has it (on radioreference.com) that the City of Glendale is switching to the RWC on February 6th. It is also said that they will be encrypting everything but PD channel 1, PD channel 4, and some city service TG's.

Oh god no.this is why I am not buying any more scanners - everything interesting is now encrypted. I can understand SWAT ops and stuff, but geez...
Your small time crooks don't have the money to buy $500+ scanners, much less the knowledge to program them.

Cartels, very advanced criminals, etc. YES AND/OR MAYBE.

Doesn't matter. It just ruins the hobby even more.

Flame away..

From: ja moran
Topic: 17577 Message: 17582

the RWC actually makes listening easier. You have one set of frequencies and many different talk groups before each agency or entity had their own frequency
you had a few that used shared trunked systems.... Once you get everything loaded it's not bad....

The city of Glendale and Marana have been using the same frequencies but different radio systems Marana of course is in the north end of Pima county and Glendale in the nw area of Maricopa county.   Usually you can hear one or the other, but if you are up high like on south Mountain there is a chance you can hear traffic from both   I think around Casa Grande you can hear both marana and Glendale...

17583. Buckeye Valley Fire

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-01-25 01:37:09 UTC
From: Kevin
Topic: 17583 Message: 17583

I heard a dispatch on 152.190 for Engine 328 which is close to me way out West. They were told to switch to ch9 for a brushfire at 351st & Dobbins.

SW Frequency Directory 10th Edition says they are part of Phoenix FD Radio System except chs 11-16.
What page would this be?

Are they on the old ch 9 and the Phoenix FD Radio System?
I've lost the frequecise for the old VHF channels 1-10.

Appreciate any clarification.
Thanks Kevin

1. 154.190 (Dispatch)
2. 154.250
3. 154.070
4. 154.280 (mutual aid)
5. 153.830
6. 154.310
7. 154.145
8. 153.770
9. 155.670
10. 151.370

If it's a fire, it's on VHF channel 9. So far, cities on the RWC are not using 800 MHz for fires.

so far, cities on the RWC are not using 800 MHz for fires.

well sometimes they do... If you hear a dispatch and they give the frequency as is K-7 vs channel 7 the K-7 is one of the RWC talk groups
I have both in my scanner.

what I like about Cochise county is there are only about 3 fire frequencies for most of the area. The highway patrol uses 460.325 for Cochise and part of Graham county and you have the Cochise sheriff on a VHF and a UHF frequency... Sierra Vista is really the largest town or city in cochise county
even though the county seat is in Bisbee you often hear the border patrol on the sheriff or highway patrol frequencies

For Phoenix, et al, fire responses will be handled on one of the VHF channels. Medical calls, including motor vehicle accidents, mountain rescues, etc will be handled on an RWC K-deck talkgroup. HazMat is also handled on VHF, IIRC.

RWC easier? Really?

Guess you really don't want to listed when something really bad happens.

From: ja moran
Topic: 17577 Message: 17590

with RWC the signals can be stronger because they use several repeaters around the area

also you only have to load the RWC frequency pool instead of a frequency for each entity you want to monitor
for RWC and other systems, you can always add in the talk group info, however without that you can hear more than if you had to monitor discrete frequencies for each entity

down in Cochise county, I need to have the frequencies for the Sheriff, Highway Patrol, Fire and BLS or USFS vs just one pool of frequencies where you can hear everyone....

From: ~Bill
Topic: 17559 Message: 17591

I seem to recall folks posting this as confirmed in the past.

inpout should be +9 Mhz

Apparently each Zone within the Region has it's own NAC Tones.

$910 - was somewhere in AZ

$920 - was in Phoenix

$940 - was in the Las Vegas Area

Hope this helps.

409.4000 may be the FPS frequency, but needs confirmation. I recently heard
someone transport another person to 104 W. Washington, giving starting and
ending mileage.

What frequencies are normally in use for such a visit? I'm looking at the nationwide frequencies on Radio Reference and don't see a listing for either of those.

I heard some activity on the GRIC (Gila River Indian Community) frequencies as well as the highway patrol. Just west of Intel is the GRIC reservation
my office is north and from the 3rd floor we can look out and watch the construction.
just west of us is also the reservation.

some of the federal frequencies in the 162-169mhz area were also active but I believe the stuff there was encrypted. Prior to the use of encryption it was more fun to listen now it's hit and miss
sometimes thre is one side of a conversation that is not encrypted. you then can put together the puzzle and figure out what's' being said....

Now I understand. You being in Cochise County and being lucky enough to still deal with good old analog systems has no idea what a pain in the butt APCO 25 is.

You have to put in all the simulcasts if you travel around the valley because it's not like conventional repeaters. Then there are the talk groups to contend with too. If you are in Mesa, you won't hear Phoenix traffic at all. No way, no how. If you are in Tempe and want to listen to Glendale, not gonna happen unless someone from Glendale is in Tempe with their radio on because they are on a different simulcast.

Maybe it's just me but I would love to have the good old analog back. Thank goodness Phoenix Fire is staying on VHF so at least you can still hear their dispatches from anywhere in the valley.

I hope for your sake you never have to deal with APCO 25.

Cochise and Graham county are easy to monitor as is some of the stuff from New Mexico too

sometimes you can hear 460.375 an interagency frequency being used or the BP on the sheriff or HP frequencies

about a month ago, I heard a chase that started near Benson and continued into New Mexico

the CBP stuff can be encrypted but you can also hear them on other agencies frequencies

the Horseshoe and Monument fires this past summer were fine examples of how everyone can be on the same frequency and coordinate response activities

CBP 168.825 169.55 169.9375 168.975 170.35 170.4375 171.0375

171.1875 171.325 171.7625 173.7375 170.625 162.3125 163.7775 163.65

HP D-9 460.325

CSH 155.52 155.04 154.05 453.75 fire (many county fire agencies) 154.145 154.13 154.31 154.38

Benson 153.37 151.115 fire 155.1

Bisbee 154.115 155.37 fd 154.115 154.415

Douglas 154.74 155.625 fire 154.31 154.13

Sierra Vista 154.75 154.815 155.64 fire 154.25

FHU 172.325

Willcox 155.985 155.415 fire 154.355

Thanks, Joe. That leaves me with more questions.

I thought K-deck was all PHX FD?

Apache Junction PSAP was on TG 2879?

Phoenix PD C-1 was on TG 2806?

D-deck NET's 400-900 was on TG's 2948-2943?

Phoenix PD B-10 was on TG 2974 as FD Link?

It's not a bad idea to have individual city PSAP's as well. When that hostage situation a while ago in Chandler was occurring they were re transmitting the audio over their PSAP channel so other agencies could monitor.

OK guys,

Didn't want to believe it, but I guess they are now on RWC..

What are the frequencies and TG's please?

Thanks a bunch

Subject: [ArizonaScanner.com] Re: City of Glendale switching to the RWC

TG 4731, channel A-10 was heard with clear voice last night. Possibly a
Arena/Stadium/Westgate area useage.

So that's another TG to add to the unencrypted list.

They're on Simulcast G of the RWC.
The clear voice TG's are:
4740 for South Patrol A-1
4738 for North Patrol A-4
4731 for A-10
4728 for Inside Arena/Stadium A-13
4727 for Outside Arena/Stadium A-14

Two things...

1) What is TG 44144 on the county trunked system used for? At times it sounds like detectives. Other times it doesn't

2) Search 8, 159.090 appears to have gone to a DCS code in place of the 127.3 PL tone. Can anyone confirm?

17618. GRIC on RWC

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-02-15 08:53:19 UTC
From: ja moran
Topic: 17577 Message: 17618

Seems the Gila River Indian Community or GRIC may be on the RWC. sometimes I hear things in clear analog, usually when it's a fire department situation, other times it appears their frequency or talk group is encrypted. the GRIC covers a vast area of central Arizona going from the southern border of Phoenix and Chandler down to Casa Grande and from the Estrella Mountains on the west to almost Florence on the east.

they were on a 453 Mhz frequency. judging from the antennas on their patrol vehicles I think they are now on the 800mhz frequencies however I also see some vehicles with a 4 antenna array which is for lojack.

Since the reservation has had the casino revenue they have made improvements in their communities and also their police and fire services.
I believe the fire department is one of many that is dispatched from the Phoenix Fire Department center.

Gila River is not part of the RWC, but does share a mutual aid agreement with the surrounding communities, including those that are on the RWC and the TOPAZ systems, which would explain the 800 MHz antennas. They do their own dispatching for fire. Since I don't monitor PD all that often, I can't tell you much about their PD

From: n7qyk@cox.net
Topic: 17577 Message: 17620

Here is the listing for Gila River from http://www.radioreference.com

Gila River Indian Community
Frequency License Type Tone Alpha Tag Description Mode Tag
867.62500 WPVV494 BM 293 NAC Gila PD Ops Gila PD - Operations - Encrypted P25 Law Tac
866.91250 WPVV494 BM 293 NAC Gila PD TAC Gila PD - TAC - Encrypted P25 Law Tac
453.66250 WPTN538 RM 293 NAC Gila DOC Gila Department of Corrections P25 Law Tac
866.93750 WPVV494 RM 293 NAC Gila FD 2 Gila FD - Tactical P25 Fire-Tac
867.27500 WPVV494 RM 293 NAC Gila FD 1 Gila FD - Dispatch P25 Fire Dispatch

As Ed mentioned, you will hear them on both the RWC & TOPAZ 800MHz digital systems as well as the VHF fire channels areawide. The 800MHz channels will all be P25 digital voice with some channels encrypted while the VHF/UHF channels are likely analog voice.

I also heard encrypted P25 transmissions on 407.1375 with a NAC of 482. I don't know if it's related.

The frequency of 408.4375 with a DCS of 114 was heard with many mentions of an ER. VA Hospital?

And 412.675 with a PL of 192.8. Open carrier only.

The G&F system has completely changed the way it operates.

Unless you happen to be within range of the particular mountaintop that the officer is communicating through, you won't hear a thing.

It's not like the old way where every station was on a party line, and the White Tanks station was connected 24/7.

The RWC, also known as the Regional Wireless Cooperative is a massive P25 digital trunked radio system that is used by the City of Phoenix as well as numerous other cities in the area. The system is a simulcast system with MANY towers throughout the valley and stretching into Pinal and Yavapai Counties.

RadioReference.com has a detailed listing of the system at:

Subject: Re: [ArizonaScanner.com] GRIC on RWC

Here is the listing for Gila River from http://www.radioreference.com

Gila River Indian Community
Frequency License Type Tone Alpha Tag Description Mode Tag
867.62500 WPVV494 BM 293 NAC Gila PD Ops Gila PD - Operations - Encrypted P25 Law Tac
866.91250 WPVV494 BM 293 NAC Gila PD TAC Gila PD - TAC - Encrypted P25 Law Tac
453.66250 WPTN538 RM 293 NAC Gila DOC Gila Department of Corrections P25 Law Tac
866.93750 WPVV494 RM 293 NAC Gila FD 2 Gila FD - Tactical P25 Fire-Tac
867.27500 WPVV494 RM 293 NAC Gila FD 1 Gila FD - Dispatch P25 Fire Dispatch

As Ed mentioned, you will hear them on both the RWC & TOPAZ 800MHz digital systems as well as the VHF fire channels areawide. The 800MHz channels will all be P25 digital voice with some channels encrypted while the VHF/UHF channels are likely analog voice.

It's an acronym for Regional Wireless Cooperative, which is a P25 trunked system used by many Phoenix metro agencies.

RWC is the Regional Wireless Cooperative. It's a shared P25 trunked system that's used by many agencies in the Phoenix metro area.

The RWC, also known as the Regional Wireless Cooperative is a massive
P25 digital trunked radio system that is used by the City of Phoenix as
well as numerous other cities in the area. The system is a simulcast
system with MANY towers throughout the valley and stretching into Pinal
and Yavapai Counties.

RadioReference.com has a detailed listing of the system at:

http://www.radioreference.com/apps/db/?sid=2508

17644. New Scanner?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-02-20 10:57:43 UTC
From: Ken
Topic: 13833 Message: 17644

Greetings!

Long-time lurker, rare poster around here; time to ask the question.

In an era long, long ago, monitoring using relic receivers such as such as a BC100 or a BC205 <?? I'm away from home at the moment...I think that was the model of my newest receiver> was an enjoyable way to pass the time on occasion.

With the vast changes in technology over the last couple of decades, and with the assistance of those who set up scanners & stream them over the web, my wife and I have reconnected - just a bit - with the monitoring hobby we had in the early 80's thru the early 90's

With that preface stated, if you were to recommend someone a receiver to get back into the hobby, which one would it be?

As we're here in the Pima County area, the in-the-clear of TPD is always a fun listen. Back in the time period of that BC205, Pima County Sheriff was a pain, when they went to their new trunked system. My understanding is that there is a move to do what I read here with the Maricopa County interconnected agency systems in Pima Co at some point in the future. Obviously, the ability to receive what's capable would be nice.

We listened to PD, FD, and whatever else made for entertainment. Asd technology changes, it's a hope that the hardware keeps up with the listening opportunities.

I've rambled enough at this early hour. Hope I've been able to give you an idea of the history for your response. Thanks!

From: ja moran
Topic: 13833 Message: 17650

I have a uniden scanner and like it I may get another. Next to the uniden unit is an AOR scanner which still works really well for the analog stuff
in rural Arizona where 800 and trunked is not that common. I had two AOR units. The uniden unit can download it's information to a laptop or PC via a serial cable. You can also program the unit from the computer.

On my truck behind the cab is a platform I built that has 4 antennas (27M CB, 2/440 04 150,mhz and 450-460 mhz a 450/800 uhf and another vhf/uhf. all ar NMO mounts... I ran the cables down and entered the cab behind the passenger seat near where the jack is stored. The radios are either powered by hard wired connections or transformers that I run from an inverter. The 400W inverter will also charge or power my laptop.

the AOR unit is nice in that it also gets shortware which means I can listen to Radio Australia on one and scan on the other radio.

just added an Alinco tri band (144-440-1200 mhz) radio to my list of "toys"

---
technology is nice when it works! ---prefer TEXT e-mail to phone tag :) .....

I monitor the YRCS. DPS in the Phx area simulcast on it and I have heard DPS CID on the system but not as a simulcast of any of the 4 UHF channels (I monitor DPS UHF on a different radio). AOT has also changed to the system as I have copied them working several serious crashes closing the interstate.

PVPD's conventional 800 repeater system brings you back to what's enjoyable about scanning. They don't use a 10-code, they call the dispatcher by his/her first name, they work the call on the air. Their Mummy Mtn site provides good coverage for the town but doesn't get much west of Central Ave.

Gila River was one of the first communities in the valley to go 800 mhz, this was in around 2001. Next phase will be trunked. They may become a member of the RWC but unless otherwise directed they will maintain their own communications systems hopefully trunking it soon.

Topic: 17577 Message: 17661

Actually Tempe and Glendale were the first agencies to go to 800 MHz in AZ using the first GE trunking systems back in the mid to late 1980's.

Anyone remember the ping of the control channel as it moved from voice channel to voice channels waiting for a call, all channels were available for voice traffic also, no control channels at that time.

Later they had as I remember GE MARC systems that at the end of each voice channel dropout would send out a series of audio tones meant to fool scanners from going to the next channel.

The end tone on a voice channel dropout would send out tones that sounded the jingle "GE we bring good things to life", there were actually old DOS programs coded up to ignore the end tones and continue trunking scan.

In the first days of the mid to late 1980's early trunking systems, a bunch of us in Tempe, Chandler Phoenix and Glendale were using UHF tv tuners as down converters, converting the 800 MHz analog trunking to all models of analog scanners that were scanning in the ~40 to 48 MHz range, TV tuners used an approximate 45 MHz IF.

With the above software interfaced thru various logic gates and using old bearcat and radio shack analog scanners we were able to follow things to a certain degree, in those days you couldn't lock onto a talkgroup since there were no data channel decoder on the market until a few years later when near the early 1990's decoders appeared.

As a result you typically heard the next channel in the logical order of your scan list which frequently was the garbage collectors instead of a PD unit.

Ican remember when gila river pd made the decision to go digital encrypted,Phoenix tried to block it, and actually took them to court and gila river won the case,and went encrypted anyway.the only other law enforcement agencies in the entire region, that practice that are mesquite,nevada,douglas az, and then there is albuquerque,new mexico which is on some form of voice edac system that cant be monitored at all.

Ken,

I solved that changing scanner problem real fast, I just moved to Prescott 23 years ago and didn't have to worry about trunking or digital for a long time but now Prescott pd is planning on P25 within the next 10 months, fortunately my main home is in Oregon and so far nothing is P25 up here, only analog trunking.

When I am at the Prescott home it's still nice to be able to listen to analog FM on the scanner, at least for another 10 months.

LOL I hear you ,my parents retired in dewey,az and i get YCSO from my psr-600 with a common telescope attena from mesa. i was not aware that prescott was planning to switch. not suprised though. wouldnt suprise me if they create a verde valley network simaliar to rwc in phx.i kept hearing for several years that oregon had switched to some system that cant be monitored. and i go through oregon once every couple of months and i have no problems up there. i hear everyone around me just fine.

AJ Mounted Rangers are the same frequencies as the staff of "Lost Dutchman Days" (in Apache Junction) is using,

Perhaps someone can pick it up on a scanner this weekend, please?

17667. "Lost Dutchman Days" (in Apache Junction)

Prescott decided to purchase VHF P25 equipment due to narrow banding, even though they knew they didn't need P25, the purchased the P25 radios mainly because of the need for Central Yavapai Fire district, Prescott fire and Police and YCSO to talk to Prescott Ntl forest was the deciding factor in purchasing new P25 radios.

There isn't really anything in Oregon that can't be monitored in analog or P25 clear except for some federal IWIN that's encrypted throughout the state up in the 163 to 174 range.

There was one PD agency SW of Portland that was running MPT-1376 but they have migrated to a county wide 800 MHz analog system.

The Ore state police and dept of transportation are working on a minimal VHF P25 system that harris has installed, there are some districts in southern oregon that are testing the VHF system now but even these are non encrypted.

I have to say that the choice for OSP to stay with VHF but simply turn P25 on was the most logical decision that I have heard of any state agency deciding lately, this and CHP sticking to Low band which is still the best for that state.

Mike

Roger that.

For benefit of those with a bit of sight impairment, who view text in very
large fonts; for those that receive the group in digest mode;
and as general concise and good communications practice, I too
would plead with others to PLEASE trim your posts.

Unfortunately, I've asked before and gotten some pretty
cop out excuses for why trimming is "hard to do".

To me, it's kind of like repeating every word of a dispatch
starting at the beginning of the call, every time new info
is added to the traffic.

This is exactly why people get turned off on forums and groups.

The Search function could find tons of frequencies he doesn't need.

At least show the guy RadioReference's Database, the book we all know about, or Google, or even help the guy!

Chris

It's easy to find out. That's what the search function on your scanner is for.

Sheesh!

You might want to try here as well
http://groups.yahoo.com/group/ArizonaFedCom/

As for a Federal Band Plan ? Nope that went out the window with Narrowbanding and the ReBanding of the 400-420 Band [note - don't stop as 406, use 400]

As for the RR NAC Wiki - use it carefully as it is only a Suggested Guideline , due to many agencies using the same NAC

Try here for your Federal fill

How do you think we found those frequencies in the days before Radio Reference and groups like this? Police Call was the only source and that information was as least 6 months and sometimes 2 years out of date so you had to find it yourself. In fact I still find things myself and don't ask on here.

That is why the Apco25 scanners even have a talk group search function.

Guess part of the real hobby of scanning is almost gone....finding it yourself.

If your offended that some still like to find it on their own and not have it handed to them, sorry for you.

> How do you think we found those frequencies in the days before Radio Reference and groups like this?

How did people get around in the days before cars? Do you think horses are still a good idea? Back in the days of crystal scanners, I guess you bought ALL the crystals available at Radio Shack to see which ones were the frequencies you wanted? Or maybe you ASKED someone for some info....

> Police Call was the only source and that information was as least 6 months and sometimes 2 years out
> of date so you had to find it yourself. In fact I still find things myself and don't ask on here.

Good for you. Not everyone has hours upon hours to devote to a hobby. Some just want a way to pass some time and THOUGHT that they could do that listening to a scanner. BTW, agencies weren't changing frequencies, bands and talkgroups (a word that didn't even exist when I started out) every few months back then. The only thing you had to worry about is if they were using another department/agencies channels for clandestine ops.

> Guess part of the real hobby of scanning is almost gone....finding it yourself.

Attitudes like yours will help cause (along with the price of the hardware) the extinction of the remainder of the hobby eventually leaving you to listen to the garbled, encrypted transmissions of the public water department in peace.

> If your offended that some still like to find it on their own and not have it handed to them, sorry for you.

I doubt what offended him was the fact that you liked to spend hours or days looking for stuff on your own.

I used to spend HOURS listening, searching and figuring things out. Unfortunately, I don't have that kind of time anymore. To listen to you, I may as well chuck the scanner in the trash now because I can't "find it for yourself". I have a scanner that is WAY under utilized because I don't fully understand the way it needs to be set up. I don't have the time (nor the inclination) to sit and study the manual over and over again. I've read it and just am not getting it. But I refuse to ask on here because when I have in the past, this is the attitude I am dealt. It's not worth it. Someday I will get the time again and will finally figure it out.

To Chris F.:

> This is exactly why people get turned off on forums and groups.

It is also a good part of the reason that the hobby won't be getting large enough to make a difference when agencies encrypt TG's or put some other type of restriction on the listening to their transmissions. Scanners, like it or not, are frowned upon in more and more places because people have the notion, right or wrong, that scanner listeners are nerds, criminals, terrorists or some other lowlife. PART of that attitude comes from people that tried to get into the hobby and were stonewalled from getting any help understanding the complexities that are present in setting up a modern scanner. Maybe they had one years ago when all they had to do was buy $50 worth of crystals and they'd be set. Those days are long gone.

> The Search function could find tons of frequencies he doesn't need.

It also wouldn't be of much use if he lived in the west valley and the channels weren't on a repeater.

> Sheesh!

Yeah.

17679. frequency counter

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-03-01 04:23:26 UTC
From: ja moran
Topic: 17622 Message: 17679

for a while I had a frequency counter in my truck and would have that on as I was driving around town...If I came upon police or fire scenes or a police car I would look at the counter and see if it lit up with any frequency info.

this is a good way to find frequencies... My new Uniden scanner has a "close call" feature where it functions like a frequency counter. I also occasionally use the bandscope function.which is like a spectrum analyzer. I love it when I go through the drive through the scanner will find the headset frequencies. I have to turn the scanner volume down so it does not drive me crazy.

besides the scanners I also have shortwave radios. My AOR scanner will pick up shortwave and AM or medium wave also. Sometimes while I eat my lunch, I will listen to stuff on shortwave on the scanner. The shortwave like the Air traffic or ATC frequencies are AM modulated and is more susceptable to engine and electrical noise interferance than FM modulated stuff. Most of what you hear on the scanner usually is Narrow FM the exception being TV and FM broadcast signals which are wide FM or vhf or uhf ATC which is AM.

I store many of my scanner and shortwave frequencies in a database. the database lets me plug in the frequency and get back who it might be or enter a user and get back their frequencies....It's an old DOS DBASE program I use but I can easily port this to Oracle or Informix

why is ATC AM, ? I htink it's so the pilot or controller knows if more than one unit is transmitting at once ??? anyone have a better answer

JOHN

John,

Agree on everything you say.

Thanks for the defense.

But still, for all you others, other people aren't as Internet savvy and know where to go. Help them.
It gets members, and we can all learn from each other when we get more educated - some can find things others can't.

Isn't that what human (or this group's) knowledge is about? Put everything in a library, or a group.

Chris

How did people get around in the days before cars? Do you think horses are still a good idea? Back in the days of crystal scanners, I guess you bought ALL the crystals available at Radio Shack to see which ones were the frequencies you wanted? Or maybe you ASKED someone for some info....

> Police Call was the only source and that information was as least 6 months and sometimes 2 years out
> of date so you had to find it yourself. In fact I still find things myself and don't ask on here.

Good for you. Not everyone has hours upon hours to devote to a hobby. Some just want a way to pass some time and THOUGHT that they could do that listening to a scanner. BTW, agencies weren't changing frequencies, bands and talkgroups (a word that didn't even exist when I started out) every few months back then. The only thing you had to worry about is if they were using another department/agencies channels for clandestine ops.

> Guess part of the real hobby of scanning is almost gone....finding it yourself.

Attitudes like yours will help cause (along with the price of the hardware) the extinction of the remainder of the hobby eventually leaving you to listen to the garbled, encrypted transmissions of the public water department in peace.

> If your offended that some still like to find it on their own and not have it handed to them, sorry for you.

I doubt what offended him was the fact that you liked to spend hours or days looking for stuff on your own.

I used to spend HOURS listening, searching and figuring things out. Unfortunately, I don't have that kind of time anymore. To listen to you, I may as well chuck the scanner in the trash now because I can't "find it for yourself". I have a scanner that is WAY under utilized because I don't fully understand the way it needs to be set up. I don't have the time (nor the inclination) to sit and study the manual over and over again. I've read it and just am not getting it. But I refuse to ask on here because when I have in the past, this is the attitude I am dealt. It's not worth it. Someday I will get the time again and will finally figure it out.

To Chris F.:

> This is exactly why people get turned off on forums and groups.

It is also a good part of the reason that the hobby won't be getting large enough to make a difference when agencies encrypt TG's or put some other type of restriction on the listening to their transmissions. Scanners, like it or not, are frowned upon in more and more places because people have the notion, right or wrong, that scanner listeners are nerds, criminals, terrorists or some other lowlife. PART of that attitude comes from people that tried to get into the hobby and were stonewalled from getting any help understanding the complexities that are present in setting up a modern scanner. Maybe they had one years ago when all they had to do was buy $50 worth of crystals and they'd be set. Those days are long gone.

> The Search function could find tons of frequencies he doesn't need.

It also wouldn't be of much use if he lived in the west valley and the channels weren't on a repeater.

> Sheesh!

Yeah.

John L.

17681. Lost Dutchman frequency finding suggestions....

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-03-01 18:24:28 UTC
From: kb7aqd
Topic: 17681 Message: 17681

Thanks to the list of Motorola handheld radio frequencies at the back of the SWFD, it helped me program the 27 VHF and 56 UHF GT series radio frequencies into my scanners.

Of those, many users prefer these specific frequencies of the 27 plus 54 frequencies:

151.625 151.955 154.515 154.540 154.570 154.600 158.400 MHz VHF

467.7625 467.8125 467.850 467.875 467.900 467.925 MHz UHF

Try also the FRS/GMRS 462 MHz frequencies for many retail and business activities.

Hope these help!

73
Robert

Thank you for your kind responses to a newbie! You made me feel SOoooo welcomed here! NOT!!

I have a 32 channel, 2 way "walkie talkie" type Kenwood radio, which happens to scan ONLY the frequencies PROGRAMMED INTO IT, not a regular scanner like most of you. I was using it to delve into a new hobby!

If my questions upset you so drastically, perhaps you should have "ignored" or "blocked" me! You are the kind of person who destroys the reputation for chat groups!

I OBVIOUSLY had NO FREAKIN' CLUE where to look, or I would NOT have ASKED!

Please refrain from answering anything I ask about in the future, IF I stay in this group!

I shall inquire about blocking you and your profile with the moderator.

for a while I had a frequency counter in my truck and would have that on as I was driving around town...If I came upon police or fire scenes or a police car I would look at the counter and see if it lit up with any frequency info.

this is a good way to find frequencies... My new Uniden scanner has a "close call" feature where it functions like a frequency counter. I also occasionally use the bandscope function.which is like a spectrum analyzer. I love it when I go through the drive through the scanner will find the headset frequencies. I have to turn the scanner volume down so it does not drive me crazy.

besides the scanners I also have shortwave radios.   My AOR scanner will pick up shortwave and AM or medium wave also.   Sometimes while I eat my lunch, I will listen to stuff on

shortwave on the scanner. The shortwave like the Air traffic or ATC frequencies are AM modulated and is more susceptable to engine and electrical noise interferance than FM modulated stuff. Most of what you hear on the scanner usually is Narrow FM the exception being TV and FM broadcast signals which are wide FM or vhf or uhf ATC which is AM.

I store many of my scanner and shortwave frequencies in a database. the database lets me plug in the frequency and get back who it might be or enter a user and get back their frequencies....It's an old DOS DBASE program I use but I can easily port this to Oracle or Informix

why is ATC AM,   ? I htink it's so the pilot or controller knows if more than one unit is transmitting at once ??? anyone have a better answer

JOHN

How do you think we found those frequencies in the days before Radio Reference and groups like this? Police Call was the only source and that information was as least 6 months and sometimes 2 years out of date so you had to find it yourself. In fact I still find things myself and don't ask on here.

That is why the Apco25 scanners even have a talk group search function.

Guess part of the real hobby of scanning is almost gone....finding it yourself.

If your offended that some still like to find it on their own and not have it handed to them, sorry for you.

17683. Re: [ArizonaScanner.com] Digest Number 3463

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-03-01 19:17:36 UTC
From: Alyssa Turner
Topic: 17682 Message: 17683

BTW, thank you Chris for the support. I tried Google, but to no avail... Even the Captain of the group does not himself know, as the radios were set up many years ago, and the person who set it up has passed.

As a newbie I had no clue how else to find the freqs. As I said earlier, my radio has no "search" function and only scans thing programmed into it. I appreciate your tip about "RadioReference's Database.

Sorry, didn't know this was group was limited to "advanced" or "professional" users. (His response is also why "hobbies" die out, as "senior" people guard the hobby and refuse to share their knowledge and help the "interested, learning" ones learn.)

I guess they had poor examples to learn from himself.

Thanks, Bill. I am subscribed to the Arizona Federal group here on Yahoo. The SoCalFedCom blogspot link doesn't work on my phone. It takes me to Google's front page for some reason. And the link for RR doesn't work for me at all. Oh, well

John

for a while I had a frequency counter in my truck and would have that on as I was driving around town...If I came upon police or fire scenes or a police car I would look at the counter and see if it lit up with any frequency info.

this is a good way to find frequencies... My new Uniden scanner has a "close call" feature where it functions like a frequency counter. I also occasionally use the bandscope function.which is like a spectrum analyzer. I love it when I go through the drive through the scanner will find the headset frequencies. I have to turn the scanner volume down so it does not drive me crazy.

besides the scanners I also have shortwave radios.   My AOR scanner will pick up shortwave and AM or medium wave also.   Sometimes while I eat my lunch, I will listen to stuff on

shortwave on the scanner. The shortwave like the Air traffic or ATC frequencies are AM modulated and is more susceptable to engine and electrical noise interferance than FM modulated stuff. Most of what you hear on the scanner usually is Narrow FM the exception being TV and FM broadcast signals which are wide FM or vhf or uhf ATC which is AM.

I store many of my scanner and shortwave frequencies in a database. the database lets me plug in the frequency and get back who it might be or enter a user and get back their frequencies....It's an old DOS DBASE program I use but I can easily port this to Oracle or Informix

why is ATC AM,   ? I htink it's so the pilot or controller knows if more than one unit is transmitting at once ??? anyone have a better answer

JOHN

How do you think we found those frequencies in the days before Radio Reference and groups like this? Police Call was the only source and that information was as least 6 months and sometimes 2 years out of date so you had to find it yourself. In fact I still find things myself and don't ask on here.

That is why the Apco25 scanners even have a talk group search function.

Guess part of the real hobby of scanning is almost gone....finding it yourself.

If your offended that some still like to find it on their own and not have it handed to them, sorry for you.

> How do you think we found those frequencies in the days before Radio Reference and groups like this?

How did people get around in the days before cars? Do you think horses are still a good idea? Back in the days of crystal scanners, I guess you bought ALL the crystals available at Radio Shack to see which ones were the frequencies you wanted? Or maybe you ASKED someone for some info....

> Police Call was the only source and that information was as least 6 months and sometimes 2 years out
> of date so you had to find it yourself. In fact I still find things myself and don't ask on here.

Good for you. Not everyone has hours upon hours to devote to a hobby. Some just want a way to pass some time and THOUGHT that they could do that listening to a scanner. BTW, agencies weren't changing frequencies, bands and talkgroups (a word that didn't even exist when I started out) every few months back then. The only thing you had to worry about is if they were using another department/agencies channels for clandestine ops.

> Guess part of the real hobby of scanning is almost gone....finding it yourself.

Attitudes like yours will help cause (along with the price of the hardware) the extinction of the remainder of the hobby eventually leaving you to listen to the garbled, encrypted transmissions of the public water department in peace.

> If your offended that some still like to find it on their own and not have it handed to them, sorry for you.

I doubt what offended him was the fact that you liked to spend hours or days looking for stuff on your own.

I used to spend HOURS listening, searching and figuring things out. Unfortunately, I don't have that kind of time anymore. To listen to you, I may as well chuck the scanner in the trash now because I can't "find it for yourself". I have a scanner that is WAY under utilized because I don't fully understand the way it needs to be set up. I don't have the time (nor the inclination) to sit and study the manual over and over again. I've read it and just am not getting it. But I refuse to ask on here because when I have in the past, this is the attitude I am dealt. It's not worth it. Someday I will get the time again and will finally figure it out.

To Chris F.:

> This is exactly why people get turned off on forums and groups.

It is also a good part of the reason that the hobby won't be getting large enough to make a difference when agencies encrypt TG's or put some other type of restriction on the listening to their transmissions. Scanners, like it or not, are frowned upon in more and more places because people have the notion, right or wrong, that scanner listeners are nerds, criminals, terrorists or some other lowlife. PART of that attitude comes from people that tried to get into the hobby and were stonewalled from getting any help understanding the complexities that are present in setting up a modern scanner. Maybe they had one years ago when all they had to do was buy $50 worth of crystals and they'd be set. Those days are long gone.

> The Search function could find tons of frequencies he doesn't need.

It also wouldn't be of much use if he lived in the west valley and the channels weren't on a repeater.

> Sheesh!

Yeah.

John L.

Topic: 17622 Message: 17684

Try the RR links again, maybe it was just a server issue.

Thanks, Bill. I am subscribed to the Arizona Federal group here on Yahoo.
The SoCalFedCom blogspot link doesn't work on my phone. It takes me to
Google's front page for some reason. And the link for RR doesn't work for me
at all. Oh, well

Unfortunately, I think it's my phone. The link highlights, but won't react otherwise when I try clicking it. Thank you anyway. I wish the Wiki had a mobile version. My phone won't allow me to search on the full site. The FCC ULS is the same way.

407.5375 is a common USPS Operational Channel at some of the Sorting and Distribution Centers
Same for 407.9375

407.1375 and $482 ☐ USPS Inspectors

Altho I can't find an FRB for Arizona nearest is Salt Lake City
413.9250 ☐ most likely the FRB [Federal Reserve Bank] back in the days, many of the FRB's used this for Paging
You might want to put in 406.6625 and 410.4875 as these have been reported as new Maint/Police channels for them

From: N7NTM
Topic: 17688 Message: 17688

I have heard a talkgroup on the Regional Wireless Cooperative (RWC), Simulcast B, that I have not found information on. The talkgroup ID is 3587. It sounds that it might be a city "services" talkgroup, but I can't find this code on Radio Reference for the RWC. I've heard things about picking up recycle and something about a broken water line, but I have not gotten enough information to determine who it might be. Can someone help me out on this? Thanks.

From: Dennis Griffin
Topic: 17686 Message: 17692

Hi John,

You probably know this, but for those that may not, DPS uses the term mainline to designate the through traffic lanes on the interstate and state highways, as opposed to entrance & exit ramps and parallel service roads. HOV lanes and I believe emergency lanes, where these exist, are considered part of the mainline. However, this doesn't preclude the Feds from using the term to designate something else, though I don't know what that might be. Possibly a smuggling route?

Cheers,

Dennis KD7CAC
Scottsdale, AZ

The control channels are also used for voice channels when not being used as control channels? I've noted before that the control channels change frequently. I heard 3 of the 4 being used over a period of 5-6 days.

I found elsewhere that the repeater outputs and simplex channels run from about 406.0xxx (don't recall exactly, but it wasn't .0125) to 415.1000, so I run a search of 406.0000-415.1000. Is that still accurate? Or should I expand that to 400-420?

I would not restrict yourself to only the "NEW" band-plan for the "A" Feds. Not everyone has migrated to the new band plan and there is still plenty out there with 415-420 as the Repeater outputs and simplex

Correct. Many single site trunking systems will rotate the 4 voice channnels every 12/24 hr period. However there have been others that use ONE and only use the 2nd when the 1st is having issues.

Good Catch on the NAC

They are likely linked or patched together when that happens. You see the same thing when Phoenix PD does it with their talkgroups in the A & B decks. The `real' radios know and show which talkgroup they are on, but scanners don't know that two or more talkgroups are linked and only show the talkgroup ID on alphatag associated received.

From: joebadura
Topic: 17698 Message: 17700

This is an issue with the current Uniden Scanners as they do not properly identify patched talkgroups on P25 trunked systems. What is occurring is the dispatcher is patching together talkgroups 2483 Patrol C and 2485 Patrol B. On Uniden scanners when talkgroups are patched, you will only hear radio traffic on one talkgroup. Depending on how the dispatcher sets up the patch, will depend on which talkgroup you hear. In your example, the dispatcher set up the patch as 2483 Patrol C as the "Super ID" and 2485 Patrol B as the "Subordinate".

GRE 500, 600, and 800 (and the associated Radio Shack versions) do not experience this issue as this was addressed by a recent update. Uniden addressed talkgroup patching issues on EDACS and Motorola Type II systems in a recent update, but it is still an ongoing issue with Motorola P25 systems.

They probably do away with a dispatcher in quiet times, then Patch B and C
and call it B. It doesnt matter. Any radio on B *or* C wiil be considered
on the combined group (c). and the field units dont have to swotxh anything

From: ja moran
Topic: 17698 Message: 17704

I have noticed that at night the highway patrol AZ-DPS seems to do a similar thing

In Cochise county that is district 9 on 460.325.
I've heard District 8, Pima County (460.425) and district 6 (460.025) Pinal County, on the same frequency

I believe there is a Repeater on Dragoon Mountain along I-10 and maybe another farther east at Dos Cebasos and probably up on Mount Lemon near Tucson too.

I heard the other day that Maricopa County is starting on the rebanding of the Truncked Radio System. Can anyone confirm this and what programming changes will I have to make on my scanner? Also will the VHF channel Search-8 have to change due to rebanding.

Rebanding will only affect the 800MHz band, so no, Search 8 will not be affected. In the 800MHz band, a block of frequencies at the upper end, gets shifted down by 15MHz. I don't recall the exact block of frequencies, however.

They have actually been doing that for years,mostly at night and weekends,they have all the towers linked together.dist 2 flagstaff for example;almost daily basis they might only have 1 or 2 dispatchers on monitoring all northern az districts plus CI.And very once in awhile when certain towers go down,you will hear them patch together statewide.

From: joebadura <joebadura@...>
To: ArizonaScanner@yahoogroups.com
Sent: Friday, March 9, 2012 4:51 PM
Subject: [ArizonaScanner.com] Re: CHANDLER PD

This is an issue with the current Uniden Scanners as they do not properly identify patched talkgroups on P25 trunked systems. What is occurring is the dispatcher is patching together talkgroups 2483 Patrol C and 2485 Patrol B. On Uniden scanners when talkgroups are patched, you will only hear radio traffic on one talkgroup. Depending on how the dispatcher sets up the patch, will depend on which talkgroup you hear. In your example, the dispatcher set up the patch as 2483 Patrol C as the "Super ID" and 2485 Patrol B as the "Subordinate".

GRE 500, 600, and 800 (and the associated Radio Shack versions) do not experience this issue as this was addressed by a recent update. Uniden addressed talkgroup patching issues on EDACS and Motorola Type II systems in a recent update, but it is still an ongoing issue with Motorola P25 systems.

It has been widely publicized for some time now that the Vekol Valley south of Phoenix and just west of the city of Maricopa is an active area for a variety of illegal activities eminating in Mexico. Does anyone have any good, verified, and un-encrypted frequencies for any of the law enforcement agencies working this area such as P.C.S.O., M.C.S.O., Border Patrol, B.L.M., etc. Living in Maricopa is a bit scary at times knowing this activity is occurring just west of the city.

Thank you in advance for any helpful information.

CBP, Customs and Border Protection aka Border patrol frequencies are in the 162-172mhz range but for obvious reasons encrypted
Pinal Sheriff is on 158.76 and their other frequencies
Maricoap County Sheriff is on their RWN or P25 network
you also have the DPS or Highway patrol on thir 460 Mhz frequencies (460.425, 460.325, 460.5, 460.025)
Sometimes even State Land is out in that area too

they use 166.850 and refer to it as vote scan 5
also in use is a simplex channel tac 5 to what the freq is i haven't a
clue as i can just hear the 166.850 repeater in prescott

they also use an AJO repeater they talk about alot on the air

they are active day and night with lots of in the clear comms,,with
blackhawks as omaha units,,the PCSO raven unit came out last night under
raven 23

they coordinate with lots of other agencies in the area

Jerry,

Tac 5, 165.850 simplex NAC293 P25 (Encrypted selected so you may hear clear P25 on air units along with AES256 at times) it's also an OTAR Channel so you will hear re-keying request in the mornings.

Ajo RPTR, 163.65 RPTR output NAC 001, also AES256 encrypted, with an input that I won't list sorry but everything else that i mentioned is what you could get off of your P25 scanners.

The Office of Marine and Air units (Omaha) will at times have AES256 turned off due to the Control head operational limitations with the Wulfsberg RT5000 avionics radio but all ground units should be Full time AES256 encrypted.

others to try in Southern AZ.
BLM Ajo: 172.5875 NAC 455 (Common BLM rptr channel)

Organ Pipe NTL Monument, Ajo rptr: 171.5375 (same as Organ pipe LEO) NAC 507 BLM uses this one also

BLM CC: 172.750,NAC293

AJO EMS use Simplex 163.175 NAC 293

DHS AJO repeater: 169.450 This was still a non ASTRO RPTR (Analog Fm late 2011/early 2012)

CBP VOTE scan group1 (West)are: (these are all tied together with varying NACS used)
164.050
163.650
173.6875
163.775
163.225
163.700
163.625
163.675
171.325

CBP Voting Scan group2 (east): (also various NACS used, too many to list)
163.675
165.975
163.725
163.775
163.650
166.850
165.900
162.3125

Other needless info that I'm sure most of you know but I'll add again just in case:

Orther air unit callsigns: UTAH callsigns are Units which are attached to Army Ntl. Guard RAID (Recon air Interdiction Detachment).

These are still mostly Kiowa OH-58's and some UH-1's but later to be upgraded to the LUH (Light Utility helicopter) UH72 Lakota's, the same as the Eurocopter EC-145's.

17720. dispatch codes

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-03-27 02:40:25 UTC
From: ja moran
Topic: 17713 Message: 17720

On Saturday I heard a chase on highway 191 that went south from the Safford area on highway 191 then east on I-10 for a few miles.
Safford is in Greenlee county and Bowie is in Cochise county. I also heard that one or more Hildalgo county New Mexico sheriff units were
involved....

question
what is a code 309 I think that is drugs ???

390 is drunk 390D is a drunk driver as is a 692

some of the dispatch codes relate to the ARS number 28-692 is the state law on drunk driving so 692 is a contraction of that.

702 is speeding and 28-702 is the state law about excessive speed.

Cochise county is generally pretty quiet but the nice thing is the repeater coverage is good.
I think the DPS district 8 which is Tucson ends at the the cochise county line. District 9 goes from there to the NM border, covers Cochise and part of Greenlee county.....

I was monitoring from my farm north of Elfrida (on highway 191 at mile 28). I first heard the chase this weekend from Near Safford on Highway 191 heading south. I believe Safford is about mile 120 on hwy 191.

I've heard a chase before that started near Benson (MP 300 on I-10) and continued east into New Mexico past MP 390 on I-10
in Arizona. That one had DPS as well as Cochise Sheriff, the Border patrol and also the New Mexico Highway patrol.

both AZ DPS/Highway patrol and the Cochise Sheriff seems to have good repeater coverage through out the area. I think DPS has a repeater up on Dragoon hill which is near Mile 315 and another farther east. They may also have one on Mt Graham.

I know in some areas, the border patrol also uses the Iridium satelite. I know they use that for the Virtual fence so agents in their trucks can see the camera

info on their laptops or tablet computrs. I am not sure if they do any voice coms via the iridium satelite network. with the satellite you have coverage in canyons and other places a ground based repeater will not cover.

Helicopters from TV3 news were working the Navy aircraft on 124.000 MHz before 8:00 AM.

What is 124.000 normally used for?

Have you heard any other frequencies?

others to try in Southern AZ.
BLM Ajo: 172.5875 NAC 455 (Common BLM rptr channel)

Organ Pipe NTL Monument, Ajo rptr: 171.5375 (same as Organ pipe LEO) NAC 507 BLM uses this one also

BLM CC: 172.750,NAC293

AJO EMS use Simplex 163.175 NAC 293

DHS AJO repeater: 169.450 This was still a non ASTRO RPTR (Analog Fm late 2011/early 2012)

CBP VOTE scan group1 (West)are: (these are all tied together with varying NACS used)
164.050
163.650
173.6875
163.775
163.225
163.700
163.625
163.675
171.325

CBP Voting Scan group2 (east): (also various NACS used, too many to list)
163.675
165.975
163.725
163.775
163.650
166.850
165.900
162.3125

Other needless info that I'm sure most of you know but I'll add again just in case:

Orther air unit callsigns: UTAH callsigns are Units which are attached to Army Ntl. Guard RAID (Recon air Interdiction Detachment).

These are still mostly Kiowa OH-58's and some UH-1's but later to be upgraded to the LUH (Light Utility helicopter) UH72 Lakota's, the same as the Eurocopter EC-145's.

Besides 166.850 being linked to 173.6125 with a NAC of 310, I believe that 170.350 is linked to 173.9375, with a NAC of 340.

166.925 may be the input to 165.600 (BLM). I can hear the dispatcher on both.

CBP aka the US Customs and Border Protection aka Border Patrol also uses the Iridium satellite. You can see the antenas that look like a paper towel holder on the roof of some vehicles, that's the satellite antenna. They also have the VHF antennas and in some cases a UHF antenna so they can communicate on interagency channels and with DPS

mount lemon, dragoon mtn and mt graham repeaters give good area coverage I think there also one by bisbee
in the Phoenix area South Mountain is a popular repeater site as is white tanks.

17733. Eloy Police

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-04-01 19:45:41 UTC
From: N7DJR
Topic: 17733 Message: 17733

Published: Thursday, March 29, 2012 9:14 AM MST
The farther spread out Eloy becomes, the harder it has been for police to stay in touch using its current radio communication equipment.

Frequent "dead spots" have plagued officers out in the field. And a FCC requirement of converting all government radio frequencies to narrow band transmission by January of next year forced Eloy PD to have an engineering study done to correct the issue.

"The Eloy Police Department provides dispatch service for both itself and the Eloy Fire District. There are certain locations within the Police Department's operational area that have very poor reception and/or transmission. Once the Department begins broadcasting on its narrow banded frequency as will be required by the FCC, the problem locations are expected to increase," explained Sgt. Michelle Tarango.

Creative Communications studied the PD's current structure and how going to narrow band frequency transmission would affect the department. They suggested moving the current tower from the landfill to behind the police department building, and raise the tower to at least 120 feet.

The department tried purchasing and salvaging a tower from another city, but it did not work out. So earlier this month, the city approved the purchase of a communication tower from Canyon State Wireless for $251,540.24. The bid, one of three, came in approximately $1,500 above budget, and funds had to be taken out of contingency funding.

The new tower will also allow for the relocation of equipment to the tower for the city's Eloy Public Works and Parks and Recreation departments, as well as be an item for possible revenue through renting space on the tower to other agencies and cell companies. Space on a tower such as this could go for as much as $1,000 a month.

The Eloy Fire District equipment will remain on the tower at the landfill.

Construction on the new tower will take two months. The Department hopes to have the new tower in place and operating by June 30.

Gotta disagree. I've seen inputs listed
and even just looked at them for AZ
http://www.radioreference.com/apps/db/?inputs=1&aid=824#cats

Talk of RR pulling info was years ago, and if memory served me correctly much of that info was restored. I could be wrong, but don't think so.

Might want to post this to him on that group :)

If the federal input is known and submitted to the database. It will be added to the database.

At this time, RR doesn’t have any government radio information pulled from the database… (I haven’t heard of any).

Removal of Information

RadioReference.com does not remove information from our service platforms unless a subpoena or court order is received requiring us to do so.

There are some very rare instances where RadioReference.com will use our judgment to determine whether or not we remove information posted to the site. If you feel you might meet that criteria, feel free to contact us at legal@.... We're open to hearing from you, but understand in almost all cases we do not remove information from the site.

I'm looking at RR right now for AZ and in the federal Government listings they only list the repeater output frequency there are no inputs showing up and the different input frequencies have been submitted in the past for these systems.

As an example Forest service at the Grand Canyon, only the repeater output frequencies are listed no inputs are showing up for me.

Also DEA and Customs Border protection are displaying the same for me.

For all of the above named fed agencies all of what is listed on RR is only a repeater output and there are some repeaters that have several different repeater input frequencies.

Maybe this information is only available to Premium subscribers (paying) of RR.

There's a setting somewhere on the site to show input frequencies or maybe you get it if you download the database. Since the majority of people don't care about the inputs to repeaters they don't show it to avoid confusion. The data is there if it has been submitted. As someone else posted, they don't remove data by mere request from an agency. It has to be a court order of some kind and I don't think they've ever had a court order them to remove information.

168.35,168.625,122.925, 170.5,168.725. 168.125 are the frequencies I have in my database for TNF. (Tonto National Forest)

the other national forests use similar frequencies. You will also find state land working some of the wild fires

I use an old DOS D-base program, it works... I probably could convert to an OpenOffice database. I use Open Office from Sun Microsystems (now SUN.oracle) Oracle killed a good thing sun and sunsolve were great now my oracle support is a pain... I guess I could use Sybase or Informix too

what I have done over the years is take frequency lists from different sources and import them into the database.

I also have one for shortwave frequencies. It lets me look up a frequency and figure out who I may be listening to or enter a broadcaster and get back a list of their frequencies sorted by time.

Curious why you think they are outdated, as 164.8250 R / 164.1250 is listed for 2012

Bill,
How did you get these frequencies ? These are password sensitive? I know comms changed last year when San Carlos finaly went to narrow band like the rest of the forest. Can you email me out of the group with those frequencies? I am looking into sending my scanner up in one of the fire towers to have a live stream. Thanks

17748. Updated information

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-04-19 23:07:49 UTC
From: ~Bill
Topic: 17743 Message: 17748

Did they change Frequencies when they went NB or did they just NB [most are just going NB], altho there are a few making changes to the input frequencies [based on what I have seen so far]

What I have is, pretty much wa/ is already listed in RR for Tonto NF [altho info is needed for Tonto NM]

Fire Net 1

164.8250 R / 164.1250 input

? / 110.9 Signal Peak

? / 123.0 Mt Ord

? / 131.8 Diamond Pt

Admin

168.7250 R / 168.1250

Fire Net 2

170.0500 R / 171.5000

Air/Ground

170.0000

Tac 1

168.0500

If we can get some real-time confirmations, I'll create a wiki for Tonto NF similar to the others that exist already

For what it's worth, US Airways has just about completed their MotoTurbo installation nationwide. Even though the frequencies may be right, you still won't be able to listen.

17754. RWC Talkgroup 2389 on Simulcast C?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-04-27 23:52:10 UTC
From: k2aux
Topic: 17754 Message: 17754

Hearing an RWC talkgroup 2389 on Simulcast C, who is this and why no listing on it it?
Sounded like 2 units talking about a court location

Thanks

Ive been monitoring in my travels all up and down california,CHP"s new digital repeater system that they are testing.Up until yesterday, I would only get an occasional hit off of it,Mostly in rural Mtn areas.Yesterday while traveling on I-10,The system went live, They simulcasting both on the traditional am bands and digital both.Crystal clear and powerful signal.My guess is change is in the air.

700mhz digital conventional. This is the new vehicular repeaters that
will be replacing the old 154.905 statewide vehicle repeaters. They will
still be on their low band channels, although those have changed for
parts of northern California and LA County. Eventually the whole state
will change frequencies but they will stay on low band.

Mike

That's the Transit Security Services K-10 channel. Not to be confused with the Light Rail Security on TG 1406. I've heard Phoenix PD dispatchers come up on 2389 to inform officers of hot traffic, particularly in the 700 precinct.

I caught Glendale PD A-12, TG 4729 in the clear tonight thanks to having a wildcard set for Simulcast G. Officers were at a concert, according to one transmission mentioning a stage. Maybe at Westgate, but I don't know for sure.

Ok, 2362 is Traffic and 2366 is Traffic Signals. I also have found and haven't yet ID'd:
2191
2192 Encrypted
3219 Encrypted

I wish someone would just post the master list (of the clear channels at least) of all the trunked systems.

John

Ive been monitoring in my travels all up and down california,CHP"s new digital repeater system that they are testing.Up until yesterday, I would only get an occasional hit off of it,Mostly in rural Mtn areas.Yesterday while traveling on I-10,The system went live, They simulcasting both on the traditional am bands and digital both.Crystal clear and powerful signal.My guess is change is in the air.

17765. Need quickest path to APCO-25 PPD and PFD scanning (BCD-996T)

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-04-29 03:09:47 UTC
From: crotalistigris
Topic: 17765 Message: 17765

Hi

I'd like to know the quickest path to setting up to scan PPD and PFD with a BCD-996T. Hopefully just a link or two. Also, any link to decent streaming of same would be nice.

I used to monitor PPD and PFD in the analog days (for about 35 years), but when they went digital, my location could no longer pick them up reliably (mountain multi-path).

I am moving to a spot that should have good coverage, so I'd like to restart my listening.

Note.. I'm one of those folks who wants first of all to listen to the good stuff, not make a science project out of the whole thing. Been there and done that...

I'd like to get back the fun of listening. APCO-25 has screwed me royally (especially with the cellularization of the transmit points).

BTW, someone asked a couple of months back about Paradise Valley. I heard them a few days ago on their analog 800 MHz frequency - just like the old days.
>

John NJ7E

First PS scanner: self designed and built converter for NBFM to car AM receiver, slope tuned for FM reception (rural Kansas). Then scanner using switched crystals on surplus police VHF receiver (7 series tube based). Then xtal Bearcat, and then into the formerly modern world of synthesized scanning.

17766. glendale and marana

you can if conditions are right and if you are in a good location get both Glendale AZ and Marana on the same frequencies. I have my scanner set up to find talk groups vs monitor specific ones. Marana and Glendale though they seem to use the same frequencies use different talk groups...

so long as people are separated by a little distance they can be on the same frequency and not interfere with each other. the Arizona Highway patrol uses the same frequency in the Phoenix area for D5, 460.325 as they use for D9 which covers cochise (SE Arizona I-10, Hwy 90, Hwy 80, hwy 191) and parts of Graham County (Safford area)

Glendale has moved to the RWC and the old frequencies are no longer in use. The overlap with Marana should no longer be an issue.

Ch 12 (TG 4729) was being utilized for the Ribfest and musical entertainment on the 'great lawn' area on the west side of 95th Ave between Maryland and Bethany (West of the stadium). Enter off of Bethany for free parking. $5. gets you into the event. You have a choice of paying more for select seating. Kenny Loggins was great last night. Best five bucks I've ever spent in a long time. Food choices were also great.

Subject: [ArizonaScanner.com] Glendale PD A-12 TG 4729 is clear

I caught Glendale PD A-12, TG 4729 in the clear tonight thanks to having a wildcard set for Simulcast G. Officers were at a concert, according to one transmission mentioning a stage. Maybe at Westgate, but I don't know for sure.

This has been talked about on the Ca. page for several months now and I'm not sure where you are obtaining the 900 MHz information that you mentioned.

All of the newest CHP mobile extenders are in the 769.XXXX MHz band not at 900 MHz.

Hi Kenneth ..

The 900mhz frequencies are links to remote mountain tops where they don't have microwave links. San Diego has all of there 42mhz channels but has operated on the San Diego County RWS for several years. The new 700mhz channels are not trunked, they are are standard digital. They are low power, working on roughly 5 watts broadcasting from the new handhelds and the cars. No 700mhz for CHP on any mountain tops.

Also, not sure what you ment the cars having been retrofitted with digital antennas? Antennas don't care weather it's an analog or digital feed. Also .. the only "AM" frequencies the CHP uses are in their Aircraft. No "AM" freqs in the cars .. just low band radios .. and now the biggest problem with the new statewide system the CHP is slowly building is the baseloaded low band antennas will not take the freq spread from 39.xx mhz to 45.xx mhz for some of the new channels.

Enjoy your listening .. CHP is a fun agency to listen to. I like the challenge due to their set up. You never know what you'll hear at what location due to the low band skip.

Mike

Digital antennas? I must be using the wrong antennas on my radios since I use regular old antennas on my digital radios.

Please explain your digital antenna comment.

17775. Med 9 462.950 in Phoenix

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-05-02 19:18:27 UTC
From: kb7aqd
Topic: 17775 Message: 17775

Sunday morning, around 9:00 AM:

462.950 pl 136.5 "Phoenix Alarm" working "Native One" on way to Phoenix. Native One advised alarm that they did not have 800/900 capabilities, so "Alarm" performed a courtesy patch to Phoenix Memorial Hospital, 1301 S 7th Ave #200, Phoenix, AZ.

How often does Phoenix use MED frequencies? Since we have 800/900 and VHF/UHF systems at our local hospitals, I have not heard much except for DPS Ranger on 463.100 MHz.

I think you are confusing the radio related REACT (Radio Emergency Associated Communications Teams)with Maricopa County REACT (Regional Emergency Action Coordinating Team). Maricopa County REACT is based out of the Maricopa County Department of Transportation.

Here is a link to their website: http://www.aztech.org/react/index.htm

As I remember, they operate on the Maricopa County System on one of the MCDOT frequencies. I researched it a few years ago so I'm just doing it off the top of my head which really isn't a good thing these days.

17781. medcom frequencies

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-05-04 16:01:16 UTC
From: ja moran
Topic: 17775 Message: 17781

the medcom frequencies are quite active around Tucson. I also often hear activity on these (in this range 462.8-463.6) in southeastern Arizona.
sometimes you may also hear the Border Patrol on the medcom frequencies if they are at an accident scene or have rescued some illegals in the desert.

Unlike in the Phoenix area, in Cochise county, Hospitals are separated by distance.... willcox-douglas about 40 miles, willcox-Benson, about 30+ miles, I think the next hospital east of Willcox is in Lordsburg New Mexico.

Benson, Douglas, Sierra Vista, Bisbee, Willcox have hospitals. I often do see a helicopter at NCCH (northern cochise county hospital) in Willcox. SAfford, in Graham county also has a hospital.

earlier this yearr I think the DPS Phoenix did get a bomb threat and phoenix traffic was handled by the Tucson Dispatch center near Valencia and Tucson Blvd, by the Tucson airport.

Tucson DPS dispatch generally handles most of southern Arizona, Phoenix usually Maricopa coounty and Flagstaff handles northern Arizona.

I was on I-10 near Benson and thought it was strange to hear Phoenix traffic on frequencies usually used for Southern Arizona districts.

the problem with people who make bomb threats is they cause more problems for everyone else than they solve. I heard of cases where someone was late for a plane and called an airline or the airport and said there was a bomb on flight XYZ to delay the plane that person who phoned in the bomb threat got more trouble than they bargained for, trouble for them and trouble for lots of other people too....

Subject: [ArizonaScanner.com] medcom frequencies

the medcom frequencies are quite active around Tucson. I also often hear activity on these (in this range 462.8-463.6) in southeastern Arizona.
sometimes you may also hear the Border Patrol on the medcom frequencies if they are at an accident scene or have rescued some illegals in the desert.

Unlike in the Phoenix area, in Cochise county, Hospitals are separated by distance.... willcox-douglas about 40 miles, willcox-Benson, about 30+ miles, I think the next hospital east of Willcox is in Lordsburg New Mexico.

Benson, Douglas, Sierra Vista, Bisbee, Willcox have hospitals. I often do see a helicopter at NCCH (northern cochise county hospital) in Willcox. SAfford, in Graham county also has a hospital.

Subject: [ArizonaScanner.com] Evacuation of DPS Dispatch last night?

Around 3:00AM, as I was monitoring 460.325 DPS Central, the dispatcher said she needed to evacuate the dispatch center, and all traffic must go to Statewide (460.225). They were back on Central about 45 minutes later.

Was this an exercise, or an actual event?

Ken,
What specific frequencies are you hearing ADOT Enforecement units communicate on during their enforcement activities? Living close to SR 238 in Maricopa, I fairly often see them checking commecial truck weights for the many semi trucks that use the roadway going west to the Butterfield Landfill, Gila Bend, and as a shortcut to hook up to I-8.

Thank you so much!

Subject: Re: [ArizonaScanner.com] For those enthusiest that follow CHP. Ca Hwy Patrol

This has been talked about on the Ca. page for several months now and I'm not sure where you are obtaining the 900 MHz information that you mentioned.

All of the newest CHP mobile extenders are in the 769.XXXX MHz band not at 900 MHz.

--- In ArizonaScanner@yahoogroups.com, Kenneth Howard <scanned_one@...> wrote:
>
> The 900mhz list i got from radio reference;bank them all,and created a talk group out of them,and until the other day, would get just random hits on it,mostly up north and in rural mtn areas,butt friday the talk group came alive,All of the inland districts,barstow/indio/mohave /bortac/winterhaven/rancho cucamonga/riverside. They were all simulcasting both on am as well as digital.and the signal was powerful and crystal clear.the only patrol area that is and has been 100% digital is the san diego and el cajon districts as they joined san diegos system a few years ago,and currently is still on it.butt based on observation,the switch will probably be flipped soon.even alot of the new chp vehicles ive noticed have been retro-fitted with digital attennas on there cars.so thats all i know. ill report more when im back home in 1 to 2 weeks.

For the ADOT/MVD enforcement units, try talkgroup 1109 on the YRCS. I've been hearing what sounds like them recently on that talkgroup.

There's been some other interesting communications on talkgroups 1100 and 1108 as well.

Where did you get that they're on HF? They're on VHF-low. Try 42.560 and 42.720 (White channel). And the 700 MHz frequencies are replacing the mobile extenders that are currently on 154.905, but are still being rolled out across the state.

The only thing going to 700mhz are the vehicle mounted repeaters (extenders in CHP lingo). The hand held radios will use 700mhz to talk to the cars which will still use the low band freqs to talk to dispatch or car to car. They are phasing out the High band hand helds (extenders on 154.905). The new 700 mhz vehicle repeaters will still be low power so you will have to be fairly close to hear them.

This info straight from a friend at the CHP. Hope this helps.

Mike

if I missed anything please update.. some areas I am doing from memory not from looknig at a frequency chart

HF is generally shortwave (2500 khz or 2.5 mhz to about 25000khz /25 mhz

vhf-low 25-50 mhz
50-81 mhz tv 2 and 3, 4, and 5
81-108 broadcast FM
108-118 VOR aircraft navigational beacons
118-137 vhf aircraft in AM mode
137-174 VHF high band
174-216 mhz tv channels 7, 8, 9, 10, 11, 12, 13
216-to about 225

225-406 Military UHF aircraft and other military satellite coms
404-420 federal government
420-450 2m
450-470 UHF
470-512 UHF TV and some UHF communications in certain locations
512-806 UHF TV (now some 700-800 mhz use for comms other than TV
806-840 Cellular transmit
840-869 UHF/800 mhz trunked
869-896 cellular telephones
902-940 trunked systems

L band 1 to 2 GHz
S band 2 to 4 GHz
C band 4 to 8 GHz also TVRO satellites

X band 8 to 12 GHz
Ku band 12 to 18 GHz (TVRO dishnet/directtv

K band 18 to 26.5 GHz
Ka band 26.5 to 40 GHz
Q band 30 to 50 GHz
U band 40 to 60 GHz
V band 50 to 75 GHz
E band 60 to 90 GHz
W band 75 to 110 GHz
F band 90 to 140 GHz
D band 110 to 170 GHz

Low power in a vehicle repeater isn't a problem at all. In fact
it's desirable. Officer is a few car lengths away from the repeater
(mounted in his vehicle). He uses a small HT of very low power to
talk to the veh repeater which then rebroadcasts his traffic to the
higher power transmitter and out to the rest of the CHP system.
Lower power in the HTs means smaller, lighter units, more battery life,
less RF exposure etc. It's also handy as heck for the officers on scene
to all switch to the veh repeater output freq on their HTs and they can
then talk to each other "Hey John, hold traffic up there a minute" without
broadcasting to the entire system. All the while they can hear any traffic
that comes from the dispatcher.

"Rat pack" is the old term we used to use for those HTs.

17807. signals and propigation frequency vs coverage...

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-05-09 18:21:24 UTC
From: ja moran
Topic: 17791 Message: 17807

for CHP the VHF-LOW band 38-43 mhz seems to work good for them as the lower frequencies tend to bend around some hills and mountains
while a higher frequency would tend to be more atennuated or blocked by mountains and canyons....

a good analogy is you being in a crowded room and trying to talk to someone else... your voice can be heard around corners while if someone shines a laser at you the laser is line of sight.... higher frequencies behave differently than lower frequencies.   when people go to 700, 800, or 900 mhz frequencies
they generally use one or more (often several) repeaters otherwise they may have dead zones.

I know from following the forest fires last season the USDA fire communications people use portable mobile repeaters to enhance coverage for the firefighters and their portable radios. The location and power of the transmitter and receiver also factor in to signal propigation as do atmospheric conditions.

From: ja moran
Topic: 17808 Message: 17811

what antanna or antennas do you use ?   which works best

on my truck, a F150, I have a 27mhz, base loaded, 150.450 center coil, (2m/70cm) a 450/800 mhz UHF Icenter coil and a 2m/450 center open coil
NMO mount antenna mounted on a rail behind the truck.... At home I have a 150/450mhz antenna up on the second floor

I do have a telescopic BNC antenna and a high gain "rubber duck/flexible that seems to get most 140/450 and 800/900 mhz signals well.

On my truck, I run the coax down under the truck and come trough into the cab via a groumet in the floor behind the passenger seat.

also have a 459 watt inverter so I can power my laptop or power or charge any of the radios while I drive....

I prefer the BNC antenna ends to SMA as the BNC is a little easier to change antennas.....

I often am either in Chandler, laveen, or Elfrida down in cochise county. the cochise county stuff is much easier to monitor I am going to see if I can pick up any new Mexico traffic. Hildalgo County in New Mexico bumps up against cochise county. I have heard Hildalgo county before on the DPS frequency along with the Border patrol when they were chasing some drug smugglers

As important as the antenna would be the coax, if the run is longer than a few feet. At 800 MHz, RG-58 is pretty lossy, for example, so you could lose whatever gain you got from the antenna in the coaxial cable.

If we hear or notice an agency doing something right why not give them a shout out or if they do something wrong let them know

last night two Cochise sheriff units drove past at a high rate of speed. There was a rollover crash on Davis Road. Had something like that happened up in the Phoenix area they would have closed the road. Cochise county deputies were letting traffic go by one lane at a time. 155.52 and 453.85 are the frequencies for Cochise county Sheriff....

I had to make a 50 mile trip to Lowes in Sierra Vista (that is the closest one) to get some plumbing parts and get some keys copied. When I came back after having dinner, the accident scene was still there but in the process of being cleaned up....they were still letting traffic creep by on one lane....

had Davis road been closed I would have had to detour either through Bisbee or north to Douglas then back to highway 191.
CCSO did a good job or tending to the scene while also keeping traffic moving. At most there were no more than 2 or 3 cars waiting to be allowed to get past the accident....

JOHN

Sometimes you see a combination of highway patrol border partol and sheriff at some accident scenes. usually they will be on the same frequency. BP will ocasionally be heard on the cochise sheriff frequencies.

Correct! Equally as important as a good antenna is good quality coax.
RG-58 is terrible for anything above 400mhz unless used in very short
runs in a vehicle. For a home scanner good quality coax is a must! I
have used Jafa Tech 400 low loss coax for years and have great results
on runs up to 75 feet on 800 mhz. Check them out .. good quality and
reasonable price. Good luck.

Hi Kenneth ..

The 900mhz frequencies are links to remote mountain tops where they don't have microwave links. San Diego has all of there 42mhz channels but has operated on the San Diego County RWS for several years. The new 700mhz channels are not trunked, they are are standard digital. They are low power, working on roughly 5 watts broadcasting from the new handhelds and the cars. No 700mhz for CHP on any mountain tops.

Also, not sure what you ment the cars having been retrofitted with digital antennas? Antennas don't care weather it's an analog or digital feed. Also .. the only "AM" frequencies the CHP uses are in their Aircraft. No "AM" freqs in the cars .. just low band radios .. and now the biggest problem with the new statewide system the CHP is slowly building is the baseloaded low band antennas will not take the freq spread from 39.xx mhz to 45.xx mhz for some of the new channels.

Enjoy your listening .. CHP is a fun agency to listen to. I like the challenge due to their set up. You never know what you'll hear at what location due to the low band skip.

Mike

I've recently started scanning PPD on a BCD996T.

I have seen all the district chase talkgroups except CO5 500 - which I assume is chase for the 500 precinct. I would expect it to be fairly active given 500 precinct history, but nada. It is set up as TGID 2963.

I programmed in the system from radio reference using FreeSCAN.

The only sites I have programmed are Simulcast A and North Mtn High (not sure why I put that one in - what is it, any way? North Mountain, or the high school?).

Any ideas what's going on?

Tks in advance

Yesterday I did hear Airevac 5 doing a patch on Med 5 when transportation a patient from a crash on I-8. So there is some minor use of EMCOMS. Many, many years ago (25+) when I was working on the White Mountain Apache Reservation that's all we used to communicate with our hospital & those off the reservation. Yea folks we did have ambulances before there were cell phones...LOL

I looked at the stats and it only shows the feed offline twice, But this also could have been when I was chinging the PL's for the fire. Any updated frequencies please text me at 480-246-1229 thanks. Yesterday was also the first day up so I had to get all the bugs out. If you still see it drop alot text me please.

A couple other listeners and I have noticed that this feed stays connected
for a rough average of about 3 minutes and then it stops and we get a
message saying the feed is offline. Sometimes the feed restarts right away,
sometimes it's offline for a few minutes. Any idea what's up with the
connection?

Skip? From DPS Ranger? When did they change to CB.

The Emscom portion the DPS manages has repeaters on it throughout the state. You will usually hear the Ranger Helicopters on Med 5 which is the main frequency they monitor. It is also the contact frequency for ambulances to request patches on when not in the Phoenix or Tucson area.

From: orcotruck59
Topic: 17841 Message: 17841

Hi All,

Just back from a visit to NAU and noticed the Flagstaff Public Safety System and the old NAU trunked system are totally dead. Not a peep on them, while monitoring for four days.

However, the newer (I think?) Flagstaff Regional Public Safety Cooperative System was very busy with Flagstaff PD, NAU PD and Flagstaff public works.

Sorry if this is old news to you all.

Thanks,
Bill

17842. Re: [ArizonaScanner.com] fire fallout

Yahoo group: ArizonaScanner (2007 — 2012)

From: ja moran
Topic: 17838 Message: 17842

last may and June I saw the chirachua mountains burn for most of May and June then in June also got lots of smoke from the Monument fire around Sierra Vista. The winds generelly blow from west to east.. The smoke from the Chirachua or Horseshoe fire was carried east into New Mexico while the Monument fire smoke fanned out to the east and Northeast. Much of the valley (Sulphur Springs Valley) did have dense smoke.

I will say that one good thing about the 9-11 fallout is that there is better interagency communication... DPS, Sheriff, Forest Service and Border patrol
as well as the SVPD were all on a common frequency 460.375 or 460.3625.

Cochise County sheriff have both VHF and UHF antennas on their vehicles. They use pickup trucks blazers or broncos as their patrol vehicles instead of cars. DPS uses a mix of cars and SUV's   BP has a few cars but mor often you sen them driving SUV's or pickups often a F-250

From: chrisf8657
Topic: 17848 Message: 17848

I listened to Glendale PD for 11+ years on different scanners - first on the 800Mhz Analog, then the Digital, now the change to the RWC SC-G 700Mhz freqs...and for what I'm posting, same goes for Peoria PD.

I can't understand them 95% of the time because the signal is constantly cutting out or going "digital". I'm using my BCD396XT with a RadioShack 800Mhz that worked fine for all these times... Now, the signal jumps up and down every second between 1-5 signal bars or in-between - OK on the RWC SC-A, btw.

I'm around Cactus and 59th Ave in case anyones wondering.

With all the open channels now encrypted, and now the change to the upper 700Mhz block with what I can't receive worth a damn, I don't know what to do...I'm just about at my wits end and about to get out of scanning for good.

Any help appreciated to just get the damn signal back to where it used to be so I can hear clearly :-(

Thanks in advance guys ;-)

17849. FYI: "Unknown Antenna" pictures in Album are KNOWN

Amtrak comes by my place twice daily here in Toltec,AZ usually at night I only hear them say anything if they are overtaking another train on the siding or waiting on the new double track "Highball the roll by" and all this happens on the road channel in my case 160.320 Union Pacific "Gila Sub" I haven't heard any other channels yet from Amtrak but they do chat with the front end of the train, oh and they never stop for anything along the main unless it's a station these guys blow through here at 65 to 75 mph there is a detector about a mile from my place when it go's off with "MHP 62" or higher and a lower number of axles it tells me Amtrak is coming.

It's really interesting to listen to Amtrak while on the train, as you will likely know the source of many delays that they don't necessarily mention over the PA system. Use headphones, and Amtrak has no problem with this. I've seen others with scanners on the same train as me.

If you're not on the train, in Arizona Amtrak uses tracks hosted by BNSF and UP, so the frequencies are shared by all trains. It can be interesting if that interests you. The odds of hearing Amtrak specific are low considering all Amtrak trains through Arizona only go 0-1 times per day.

There's a great site listing frequencies for each route at http://www.on-track-on-line.com/amtrak-freqs.shtml

I listen to 160.32 from my QTH (51 Ave & Camelback) and hear just one detector and traffic from down there, including the ones that are going through Maricopa.

Amtrak trains westbound are odd an eastbound even

1 sunset limited to los angeles (southern AZ) via benson, maricopa, and yuma (it should stop more places)
2 sunset limited to new orleans
4 southwest chief to chicago vi Flagstaff and Winslow
3 southwest chief to los angeles via flagstaff and winslow (northern AZ)

I took the #1 and #4 trains had laptop and GPS as well as scanner with me all the time. Just put the scanner in search mode and it found the active frequencies. the frequency will change depending on where the train is.

Amtrak any day over TSA airport nonsense and no captain to turn on fasten seat belt sign, lots of room if you are tall too

Here where I live along the UP "Gila Sub" the Amtrak passes here westbound twice in the evening Tue,Thu,Sun and westbound twice in the morning Mon,Thu,Sat although in the timetable schedule on their website doesn't mention a train on Wed I see one every now and then. They are usually at about 70 MPH according to the brand new defect detector just installed at MP-929.1 I see folks reading the paper relaxing as the train passes I so wish I was on it...LOL Not too much radio traffic from them as they pass by but I still put in the frequencies hoping!

Train Story
A few years ago I was riding my Goldwing motorcycle Eastbound on I-8 around Dateland where the RR track is real close to the highway. I was cruising along about 75 mph with my stereo playing On the Road again" by Willie Nelson. I Wasn't paying any attention to the RR track. All of sudden the eastbound train sounded it's horn. I looked over and it was traveling the same speed and direction as me, and about 150 or 220 ft away from me. The engineer pointed at me and then himself and made a motion with his arms held out like he was driving the Goldwing as if to say he wanted to be on my Goldwing, and then he pointed at me then back to the seat he was sitting in as if to say he wanted to trade places with me. Will never forget that......

From: ja moran
Topic: 17869 Message: 17870

are you sure what yo are receiving is not a harmonic
what is the actual frequency and on what did yor radio say ???

I had a Bearcat 20 channel scanner in my 1964 Chevrolet Balair this is circa 1980 and it would receive the AZ DPS/highway patrol frequencies in 481.925
Their actual frequency fir the area is 460.325 or one of the others betwen 460.025 and 460.5   the 481 frequency is about where the UHF channel 15 audio is.

oh BTW I used to be able to pick up the TV audio on the scanner
65.75 is channel 3,   185.75 is channel 8   191.75 channel 10 and 209.75 channel 12 not sure what happened because I can't hear much activity on the TV audio frequencies... I also don't get much on either VHF or UHF TV anymore. I don't watch much TV anyway don;t think I am missing much... I believe they switched delivery methods and you need a converter even for over the air channels now.... wish they's go back to Analog, it was better easier to get

JOHN

Subject: [ArizonaScanner.com] RWC bleedover into 33cm & 23cm Ham bands

Just an observation I made last night at the Outlets at Anthem. I was searching various bands while waiting for the Anthem fireworks to start, and I was picking up RWC transmissions in the 902-928 and 1240-1300MHz Ham bands. GRE PSR-500.

You don't hear the TV audio any more because the conversion to digital gave them new frequencies. They aren't reusing the old frequencies. Even if they were, they are digital now so you wouldn't be able to hear the audio anyway.

hopefully I can find a way to make my Sony Watchman work with the new TV. It worked fine with the old TV setup. the Analog transmission was easier to get and you could get it in more locations... the digital stuff is either there or it isn't

ah Jewlery Television is still analog as is one other thing... that's all

what we need is a handheld that is capable of receiving the digital TV audio....

Down in Cochise county I used to be able to get the Tucson TV stations but now that they went digital It's difficult... Now, I have to see what my big disk can pull down.. it has both a C and Ku LNB.... problem now with the large dish setups is finding people to service them. I did find a guy who specalizes in satellite equipment on Marana... he charged me $100 travel time just to come out...

My phone only allows so many characters per message, but anyway, yes, it was images, even though it was even decoding the P25 data stream.
I haven't run across 460-down-to-410 images, or, AFAIK, 800-down-to-700 images.

I believe PCSO or Pima County Sheriff has a new facility along Valencia near the Millionair hanger. They had a facility along Plumer across from the Texas instruments. I've also see the Customs and Border Protection "tail dragger" aircraft at Tucson when I was getting an airplane to go flying before work...

Flying is lots of fun, the $200 hamburger due to fuel costs is now the $400 burger..... just wish the cost of avgas would drop a little

That's the P25 trunked system, which fire is carried on (the talkgroups are on Radio Reference as well). The fire traffic is also still on VHF if you don't have a P25 trunking scanner.

I think Sw Ambulance now also uses some of the old Maricopa County Sheriff frequencies 460.05, 460.1

460.2 is used by the AZDPS/Highway partrol for the Southeastern part of MC county

you hear more activity on the 463mhz EMSCOM channels in Tucson than in the Phoenix area....

all of maricopa county including the sheriff and adult probation moved to the county's 800 mhz system.

the DPS uses 460.325 in Phoenix and also in Dist-9 (Southeast Arizona Cochise and Graham counties

Thank, you Bill. You, too have now confirmed that Southwest Ambulance's "CH. 2" is the Rural Metro frequency of 154.37. Thanks, again!

John,

You are welcome. To help with your scanning, AP 548 & 549 are based at station 548 in downtown Florence, AP547 is based at the new hospital in Florence (in the Anthem area), AP 596 & AP 597 are based at Rural Metro stations 841 & 843 (Johnson Ranch and Copper Basin) AP 531 & 532 are based in Coolidge. I know that all of the 500 series units are Casa Grande units and the 570 units are in Maricopa but do not know their exact station locations.

Bill

Non scanner related but this is great for those who have a interest in weather.

Everyone that is interested in weather and real time weather events/ severe weather should go over and check out WeatherNation TV a NEW 24/7 weather channel pure and simple at www.facebook.com/weathernation and they also have a IPhone App and working on Android. Please LIKE and SHARE the page Thanks

They moved to RWC too. You will hear them on Simulcast F in the 20xx talkgroup range, but it does not look like anyone has submitted info to RadioRefernce. I rarely listen to public works, but I will put together a list of what I have heard for Tempe and get is submitted to RR.

17897. Need help monitoring Phoenix Fire

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-08-29 15:02:28 UTC
From: John K6PIO
Topic: 17897 Message: 17897

New to the Phoenix area and I am not sure how I monitor fire. I have both the VHF and trunked systems downloaded from RR into my scanner. I hear dispatches without issue, but am not sure where to hear the rigs responding. When I hear, for example, the dispatcher say "K-Deck 9," I switch over to the "K" channel, but I rarely if ever hear anything. And I have no idea when units are told to go to what sounds like "ANA 3," what that means. The RR download has no such labels. I have tried switching to the "Event" channels, but again cannot hear anything. Anyone out there able to give me a short course in PFD dispatching?

17898. Re: [ArizonaScanner.com] Need help monitoring Phoenix Fire

First thing we need to know is what scanner are you using? That will help in an attempt to get you up and running.

The Phoenix system is a VERY finicky beast and a lot depends on where you are in the area and what you are trying to listen to. As you have figured out, Phoenix FD operates on both VHF Simplex and the 700/800 MHz P25 trunked system.

Dispatch can be heard on both VHF Channel AN1 154.190 and Trunked K Deck 1. Call type dictates which channel the call is dispatched to, structure fire (hot zone) type calls go to the simplex VHF channels while medical (non hot zone) calls are sent to the trunked system. You will also not that Phoenix FD dispatches most of the fire departments in the metro area as well.

The VHF side is simplex, so you have to be close to hear the mobiles while the alarm room transmissions can be heard easily. The trunked side is a killer on most scanners due to the simulcast transmitters driving the scanners nuts. That is usually the largest problem people have. Sometimes too much antenna can be worse them minimal antennas, while many people use directional antennas to zero in on one site that is not as clobbered by others.

Let us know what you have and there are many users here that will no doubt chime in to help as much as we can.

Hi John,

Welcome to Phoenix. I will repeat some of what Roy stated, but in a different way. Hopefully between our explanations, you will better understand.

All fire calls are dispatched on "Channel 1". This can be monitored on VHF channel AN1 (154.190) or channel K1 on the RWC (talkgroup 1795) both carry the same audio.

When you hear a unit dispatched to a K channel this is a "non-hazard" call and K channels are on the RWC trunked system. (http://www.radioreference.com/apps/db/?sid=2508). K channels can always be heard on simulcast B site, but are carried often on simulcast C, F, G, and White Tanks sites.

When you hear a unit dispatched to an AN channel, these are on the VHF system. All frequencies can be found at (http://www.radioreference.com/apps/db/?ctid=100) listed under "Phoenix, City of". All the AN channels are simplex, or not repeated. You will hear dispatch on the AN channels as they are transmitted from mountain top transmitters around the valley. To hear fire and medical units responding, you will have to be very close to the units depending on your antenna setup. It you use a handheld scanner, or base with a small antenna on the back, you will need to be within 1-2 miles of the unit. If you have an attic or roof mounted antenna, you can hear units within about 5-10 miles.

Hopefully this clears things up. Monitoring fire in the valley can be difficult because both the trunked and VHF channels have their challenges.

Best Regards,

Joe Badura

Now I'll confuse things just a little bit more. The "AN" channels will be changing their designation in the near future and will simply become channel 1, channel 2, etc., dropping the alpha characteristic, but for now they are still designated with the AN in front of the channel number. It's a long story and by time I tell it, this will all be history.

Phoenix uses a "Smart-Zone" trunked radio system. So, if there is nobody listening to a channel within range of a transmitter site, it will not transmit on that site. So, if you're listening on the C-site in Ahwatukee, but there are no RWC users listening to the same channel as you in that area, you won't hear the channel on that site. From my home in Tempe, using a Uniden 996 on a mag-mount antenna in my bedroom window, I can hear all of the sites that Joe mentions below and more. You'll need to set up your radio with all, or most, of the transmitter sites in order to have a chance at hearing everything.

One reason why you may not be hearing any radio traffic is that there isn't much. All the trucks have mobile digital terminal and a lot of information is transmitted that way. If you're not hearing any radio traffic, it's possible you have your radio and/or frequencies configured wrong.

I hope this helps you some more, and doesn't confuse you too much.

Ed
Phoenix Fire Dept.

Thanks to all for the input on Phoenix Fire. I am monitoring on three radios .. 996, 396 and 996XT. I am located a couple f blocks from PFD Station 28, just of Baseline and 16th Street. I assumed a lot of field communications were tbeing sent by mobile computers, cutting down on radio traffic, but from what has been posted, I see it is much more complex. I had hoped I would only have to program the South Mtn site for monitoring, but that obviously isn't the case.

I am beginning to miss my old department's simple four-channel UHF repeater system.

From: ja moran
Topic: 17897 Message: 17902

on I-10 as you enter Az from new Mexico 460.325 is the Highway patrol frequency
CC sheriff is on 155.52 and the fire departments are all on VHF 143.33, 154.145

once you cross into Pima county 460.425 and the medcom channels become more active. Tucson fire is on 453mhz and they also have an 800 mhz system.

on into Pinal county 460.025 and you can start to hear the Phoenix fire frequencies. 154.25, 154.31 and you also have the Gila River Indian PD and FD

On into Maricopa county 460.2, 460.325. 460.475, 460.5 and the various trunked systems

out west lapaz county 154.4 and 155.7, 460.3 and 460.325 you can also hear the southern california frequencies from Riverside county

And I want to hear the story!

Does anyone know why Mesa is dispatching Queen Creek and south Gilbert units to use tactical channel 4? I thought channel 4 was mutual aid and primarily used for talking to the helicopters for landing at incidents. I know originally it was for mutual aid for the different fire departments, but now everyone shares their frequencies, and RMFD changes to the other agency's frequencies when requesting mutual aid or being dispatched for mutual aid

Ed, if you do not want to tell it here, I'll get it from you in person some time.

Mesa, Gilbert, and Queen Creek Fire are on the TRWC. As I understand,
their channel 4 (talkgroup 3067) is not patched to any VHF frequency.
Their channel 4 is independent of the VHF mutual aid channel 4 (154.280).
Channel 14 on the TRWC (talkgroup 3076) is patched with mutual aid freq
154.280 and is often used for helo landings.

17905. RE: [ArizonaScanner.com] Need help monitoring Phoenix Fire

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-08-31 18:08:01 UTC
From: Ed (K9EDK)
Topic: 17897 Message: 17905

From your location, you should be able to hear site B perfectly for FD and site A for PD. If you're only going to be scanning from home, I wouldn't worry about programming anything else if all you want to hear is Phoenix. If you want to start listening to other systems, you may need to alter that a bit.

If you're south of 28's, you probably have a little bit of elevation and that will help you greatly when monitoring the VHF channels. I used to live right across the street from 28's and I used to have great coverage (that was long before trunked radio was even a dream).

Ed

Subject: Re: [ArizonaScanner.com] Need help monitoring Phoenix Fire

Thanks to all for the input on Phoenix Fire. I am monitoring on three radios .. 996, 396 and 996XT. I am located a couple f blocks from PFD Station 28, just of Baseline and 16th Street. I assumed a lot of field communications were tbeing sent by mobile computers, cutting down on radio traffic, but from what has been posted, I see it is much more complex. I had hoped I would only have to program the South Mtn site for monitoring, but that obviously isn't the case.

I am beginning to miss my old department's simple four-channel UHF repeater system.

The "AN" channels will be changing their designation in the near future and will simply become channel 1, channel 2, etc., dropping the alpha characteristic, but for now they are still designated with the AN in front of the channel number. It's a long story and by time I tell it, this will all be history.
>
> Phoenix uses a "Smart-Zone" trunked radio system. So, if there is nobody listening to a channel within range of a transmitter site, it will not transmit on that site. So, if you're listening on the C-site in Ahwatukee, but there are no RWC users listening to the same channel as you in that area, you won't hear the channel on that site. From my home in Tempe, using a Uniden 996 on a mag-mount antenna in my bedroom window, I can hear all of the sites that Joe mentions below and more. You'll need to set up your radio

with all, or most, of the transmitter sites in order to have a chance at hearing everything.
>
> One reason why you may not be hearing any radio traffic is that there isn't much. All the trucks have mobile digital terminal and a lot of information is transmitted that way. If you're not hearing any radio traffic, it's possible you have your radio and/or frequencies configured wrong.

>
> When you hear a unit dispatched to an AN channel, these are on the VHF system. All frequencies can be found at (http://www.radioreference.com/apps/db/?ctid=100) listed under "Phoenix, City of". All the AN channels are simplex, or not repeated. You will hear dispatch on the AN channels as they are transmitted from mountain top transmitters around the valley. To hear fire and medical units responding, you will have to be very close to the units depending on your antenna setup. It you use a handheld scanner, or base with a small antenna on the back, you will need to be within 1-2 miles of the unit. If you have an attic or roof mounted antenna, you can hear units within about 5-10 miles.

When I hear, for example, the dispatcher say "K-Deck 9," I switch over to
the "K" channel, but I rarely if ever hear anything. And I have no idea when
units are told to go to what sounds like "ANA 3," what that means. The RR
download has no such labels. I have tried switching to the "Event" channels,
but again cannot hear anything. Anyone out there able to give me a short
course in PFD dispatching?

Those are the old frequencies. Maricopa PD has moved to the RWC.
http://www.radioreference.com/apps/db/?sid=2508
Program Simulcast C site. Maricopa PD dispatch talkgroup is 2599. The talkgroup has been submitted to Radio Reference, but not yet posted to the DB. The Pinal County page should be updated soon too. > To: ArizonaScanner@yahoogroups.com

17913. what is 853.0875

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-10-05 17:54:49 UTC
From: ja moran
Topic: 17907 Message: 17913

I often get what appears to be data on 853.0875 not sure if this is a data channel for one of the P25 complexes or something else...

when I was in Indianapolis at the indy 500, I set the scanner to store stuff it found and this is one of the frequencies it found. Obviously there it had different traffic and usage than it does in the Maricopa county area...

This frequency only seems to be active In maricopa county... Not much activity on it in Pima,(Marana, Tucson) Cochise, (Benson, Willcox, Elfrida, Douglas) or Santa Cruz Countis (Sonita/Sierra Vista) areas

Interestingly, RadioReference shows the freq used on 10 or so Moto TRS s, one of which is a statewide system in IN but none in AZ, and in AZ metro areas it is licensed to Nextel.

I hear it varying between 2-5 bars of signal on a hand held scanner in Ahwatukee. It sounds like data busts similar to MDT type data. It is definitely not P25. I have also heard the CW ID. If anyone knows Morse code, you can figure out exactly who it is when it IDs. The frequency is licensed to Rural Metro (Analog voice only) and Nextel in Maricopa County. Maybe Rural Metro is using it for MDT, but their license is not accurate.

Jon,
    These are the 'old' Maricopa Police Department frequencies. What is/are the new 800 Mhz. frequencies the department is now using that are part of the Buckeye Police Department communications system?

     Thanks.

      John

I don't know as I'm not in Maricopa.

Someone else on the thread said that they were moving to the RWC and that the database updates on Radio Reference hadn't gone through yet (sometimes it takes them a couple of days). When that happens someone will add a note to the conventional listing below and add a link to the RWC there for reference.

17919. DPS District 9 rebanding

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-10-10 16:06:17 UTC
From: greyvard
Topic: 17919 Message: 17919

As of 9:48am today DPS district 9 went to state freq (?)while their radios are re-banded, as stated by the dispatcher. Does anybody know if they are actually re-banding or just narrow banding in anticipation of the January 1st FCC deadline?

17920. Re: DPS District 9 rebanding

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-10-11 04:51:34 UTC
From: greyvard
Topic: 17919 Message: 17920

I haven't received anything from either their reuglar freq. or the statewide they went to temporarily since late in the evening.
Could someone familiar with the rumors, etc... on what might be going on give me a heads up on what the rumors are?
Thanks

Don't know if it applies to District 9 but the 3 Phoenix Metro frequencies were narrow banded about 6 weeks ago using the same frequency and tone.

D9 = 460.325

I am on the Amtrak #2 or Sunset Limited East Bound and heard AZ DPS on 460.325 from about Vail on into almost Lordsburg NM

also as the train passed through Tucson we had to stop near Ajo Highway and Irvington, near the power plant and have EMS take a passenger with diabetic reaction off the train and to hospital

My Uniden Scanner has a "Service Search" option for Railroad..160.32. 160.26. 160.45 and 160.665 have been some of the frequencies the train has used.
At Maricopa station, I was talking to some guys that worked for AMtrak, one said he had the best seat and he gets there first, he was the train engineer,

JOHN

no TSA strip search, can keep shoes on and have met lots of interesting people GO AMTRAK!

Evidently the dispatcher was talking about re-banding. I did start receiving normal traffic by the next morning.
The evening before I didn't receive anything for several hours on either the normal channel nor the statewide, including the station id, until late.
Seems to be back to normal now.
Thanks for the replies.

Topic: 17925 Message: 17926

two ways to do this, terminate what you hav now with a BNC female and and get an extension from Radioshack thjey sell BNC extensions that ar either 6 or 8 feet

or you can go to a fast food place and get a drinking straw and snip off about a 2 inch length then use a knife and slice it longways so it will slip over the cable

strip both ends of the coax back about an inch to an inch and a half strip off the insulation around the center conductor too

join and solder the center conductors together cover the center conductor with the drinking straw then electrical tape
next join the join the outer ground wires together and solder them. either add shrink wrap over the connection or tape up. you can also use another length of straw over the ground wires... then tape up... use a soldering iron or lighter flame to make the shrink tube tight or to melt the tape together so it does not unravel

JOHN

Thanks for the reply. Looks like radio shack has 2, RG 58 or 59. What one do I get? It also looks like I need a BNC female to female adapter. The antenna already comes with a BNC connector.

DPS is NOT 'rebanding' the HP District or CI channels.
Only 'narrowbanding'.

All HP District channels are now 'narrow'.
Along with some CI.

Ken;

You mean Bakersfield CA?

AZDPS still has the EMSCOMM channels 1-8 programmed into their radios,
but there aren't any dispatchers available on those channels.

While driving around west Phx I've been hearing chatter on 462.95000 that sounds like stuff you would hear on the old business band. Guess the frequencies are being issued to non emergency agencies.

From my location in Gilbert with a discone antenna in the attic I can also hear what sounds like golf course activity on a frequency dedicated for EMS. It might be 462.9500 as mentioned below.

None of the EMSCOMM frequencies are even available for anything other
than hospital/ambulance/ems dispatch.

I one found a car dealership in Chandler(?) that had gotten some
radios over the internet that had the input to MED2 as one of the
frequencies. And they even had the right tone! They told me they heard
some ambulance traffic once in a while, but they thought it was one of
their guys playing around.

17936. Re: [ArizonaScanner.com] Re: DPS EMSCOMM

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-11-14 03:37:30 UTC
From: Richard Gaun
Topic: 17866 Message: 17936

I know when in Vermont coordinating EMS frequencies we were told by the FCC & the regional coordinators if we "the state" didn't lock up the UHF Med frequencies we would loose them to other services. That may be what is now happening under the narrow band scheme.

17937. Weekly FCC grants

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-11-15 21:43:12 UTC
From: Glenn Mitchell
Topic: 17937 Message: 17937

Hello, group. I put together a weekly list of new and modified FCC licenses:
<http://gmitch86.home.comcast.net/~gmitch86/quick.htm>
and I am adding this state to the site. If it is OK with the owner and the group I will post a note once a week when the new batch is ready. I usually have it ready on Sunday mornings. If you have any questions, let me know.

Topic: 17866 Message: 17938

Jon, you are correct. It is 462.95 and it is golf course groundskeepers. I'm 99% sure it's these guys: http://www.bearcreekaz.com/
I drive by there every morning and have heard them for years. They also use DTMF tone sequences to control the sprinklers.

17939. Re: [ArizonaScanner.com] Re: DPS EMSCOMM

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-11-18 13:24:14 UTC
From: Jon M. Hanson
Topic: 17866 Message: 17939

I wonder how they get away with that? That frequency is in the public safety pool and if I search for people using that frequency in Chandler I do come up with some that aren't the golf course. Probably a private business shouldn't be there at all.

I've also heard the golf course near me on a frequency that's allocated to the railroad service.

17940. DPS EMSCOMM

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-11-18 14:09:13 UTC
From: ~Bill
Topic: 17866 Message: 17940

Some of the 160-162 RR's are Dual use. Not just the old "LR" FCC
allocation.
Which Frequency ??

As for the 462.9500, it is amazing where folks get found. Probably a Typo
in the software, by a bispeceled Tech

2 should be a 7 and the 9 should be an 8 ?? Just a Guess

Nothing by 'Bear Creek' or 'Bearcreek' in the FCC at this time..

Here in Boston [New England] we even caught a transient Test Drive/Race
Course vendor [affiliated with a major Car manuf]
using the input side of the med-channels for his events across the country

We also have a Ski Area, using 460.2875, 461.2875, 462.2875, 463.2875,
464.2875, 465.2875, 466.2875, 467.2875, 468.2875 and 469.2875
talk about a lazy programming skill.

Check out the NEW Southwest Frequency Directory 10th Edition -
www.ArizonaScanner.com - The resource local experts wrote and professionals
rely on!Yahoo! Groups Links

17941. Nevada highway patrol

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-11-18 18:01:34 UTC
From: Ken
Topic: 17941 Message: 17941

I know this is alittle off topic and alittle out of range for az unless you live in mohave co. perhaps. butt does anyone out their learned the trick to monitoring NHP on there edac system. it appears to be a normal edac system.butt ive been screwing around with it for years,and you get all of the other agencies sharing it,dot,game&Fish state land and forest agencies. etc and so on.butt the talk groups for nhp. all i ever get is a very very ocassional hit like a 10second C2C conversation. the scanner will hit on the other talkgroups for nhp las vegas area and reno up north. butt no sound.and you get alot of the trunking channels.i do get them just fine in areas like pahrump,nv where they use traditional vhf frequencies.i currently have a psr-600. ANY THOUGHTS.?

17942. Re: [ArizonaScanner.com] DPS EMSCOMM

I live on Seville Golf and Country Club and I found them to be using 452.9250 MHz around their Pro Shop. This frequency technically belongs to railroads. This frequency isn't even assigned to their (expired) license:
http://wireless2.fcc.gov/UlsApp/UlsSearch/licenseFreqSum.jsp?licKey=1955637.

17943. Weekly FCC grants November 11-17

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-11-18 10:34:09 UTC
From: Glenn Mitchell
Topic: 17943 Message: 17943

Something for our newly added groups to know is that most of the modified licenses are entities doing narrowbanding. Narowbanding is supposed to be done January 13th.

The weekly FCC license grants are ready:

17944. Re: [ArizonaScanner.com] Re: DPS EMSCOMM

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-11-19 02:31:17 UTC
From: Richard Gaun
Topic: 17866 Message: 17944

I just came back from Tucson and can report EMSCOMM is alive & well there. I'm unclear who staffs the control channel but they were relaying patient info to hospital or assigning a med channel for a patch if requested. I was good to hear the system being used as it was meant to be when established many, many moons ago.

17949. Black SUVs

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-11-30 04:30:59 UTC
From: Jim
Topic: 17949 Message: 17949

Yesterday about 1300 I got stuck behind a 4 vehicle 962 at I-17 West bound and 7th St. what a mess! There was a tanker leaking ammonia and I don't know how many hurt. Everybody that was anybody was there and I had my 106 so I was listening to everything. I had DPS, DPS HAZMAT, DOT, PHXOENIX FIRE and anybody else you can think of.

I was stuck there for about 2 hours and just hanging out when going the opposite direction was 3 or 4 black SUVs and a Silver/Gray Pick-up long bed w/camper shell all code 3 with UC type lights and no markings. Yea, Yea I know all the things everybody is thinking No, they weren't Men in Black and I don't have black helicopters following me. Seriously I don't get to Phoenix very much and I figure they were some kind of Federal unit? FBI? USMS? Anybody have a good identity for this unit?

Thanks

Jim

Probably Car 958 and the PD Equiv for the SUV's. They are the Terrorism Laison Officers (TLO's) for Phoenix FD/PD could have been a DPS unit also attending from the sounds of it.

They roll on anything "big" or involving PD/FD units

C958 drives a red FD Pickup truck, not undercover by any means and they wouldn't be going the other direction anyhow.

Thanks for the replies; this unit had nothing to do with the 962. They were going someplace in a hurry, SWAT call, BOMB call, something at the airport?? I am still thinking Homeland Security or something like that. I don't think it had anything to do with a fire, at least no fire unit I have ever seen.

17954. noise?????

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2012-12-02 04:44:54 UTC
From: clifford
Topic: 17954 Message: 17954

I have a digital trunk tracker scanner and when I try to listen to the Pima county sheriff all I get is a sound like an open carrer and it sits on that channel, I can go through and L/O the noisey CH. but Im left with two or three CH. It don't matter if I use the ATT buttion sometimes it makes it wores and the squelch can be turned off and it still sits on the one CH. Isent there a way to make a scanner keep scanning when there is no modulation and only noise?
thanks for any help.

they may be encrypted at least part of the time. I know the CBP (Us Customs and Border Protection) channels often are encrypted. Douglas PD can be too. The drug and people smugglers sometimes have scanners

I thought immigrant means one went through the legal process I don't think you can have illegal immigrants but you can have treaspassers or undocumented individuals

I thought the Pima County Sheriff was on an Open Sky system, which couldn't be tracked by consumer scanners.

They are on a E F Johnson LTR Multi-Net system that can't be monitored by any scanner. There are ways to get around that. You can use the offset frequencies which I think are minus 45 from the normal frequency. It works OK, but not the best.

Sometime in 2013?? they will switch to a Motorola P25 using Phase II TDMA and you will (at this time) need a GRE PSR-800 scanner to monitor that system. GRE released a beta version of their software a few months ago that is working on Phase II TDMA systems now.

You can read more about the Pima County system at Radioreference.com

Can you elaborate?

FYI for those not in the PHX area, these 4 channels are now simucasting the exact same traffic. Phoenix Alarm is now dispatching all of the Mesa/Gilbert/AJ and associated traffic.

154.190 [PHX FD DISPATCH ANALOG]
154.340 [MESA/GILBERT/AJ ANALOG]
TG1795 [PHX FD DISPATCH DIGITAL Regional Wireless Cooperative (RWC)]
TG3064 [Mesa / Gilbert FD - Channel 1 TOPAZ Regional Wireless Cooperative (TRWC)]

Mesa PD/FD dispatch having some work done on the dispatch center, so they moved dispatchers and call takers to Phoenix PD and Phoenix Fire.

Last I heard, it was expected to be finished tonight.

Too bad. I like it, but I'm sure the Fire Guys in Mesa/Gilbert/AJ/QueenCreek got a bit tired of listening to the almost constant talking of Phoenix Alarm. :-)

From: kb7aqd Homuth
Topic: 17965 Message: 17965

454.000 Spanish language comms, FM simplex, full quieting this morning, logged from I-17 and Cactus.

Listed as Southwest Gas, and in my old 2001 Radio Shack guide, it was an allocation for oil spill cleanup back then.

The two males, one full-quieting, and the other in the noise did sound like they were repairing gas and water lines.

From: ja moran
Topic: 17970 Message: 17971

on Saturday was down at the Wallmart in Douglas and heard some Douglas Pd traffic on 155.625 part was in the clear and part was encrypted the CBP stuff on 163.725 is nearly always encrypted

though you sometimes hear Border patrol (CBP) on the cochise county sheriff 155.04 frequency

DPS or Highway patrol uses 460.325 for Dist 9 which includes SAfford, Willcox,Benson, and Sierra Vista

IN some areas you are more likely to see Border patrol than Sheriff or Highway patrol

CBP has stations in Casa Grande, Tucson, Naco, Douglas, and Willcox
